TITLE Microfiche Collection of Clearinghouse Documents Reported in Abstracts of Research Materials in Vocational and Technical Education (ARM), Volume 6, Number 2.

INSTITUTION Ohio State Univ., Columbus. Center for Vocational and Technical Education.

SPONS AGENCY National Inst. of Education (DHEW), Washington, D.C.

PUB DATE 73

NOTE 3074p.

EDRS PRICE MF-\$7.04 HC Not Available from EDRS.

DESCRIPTORS Clearinghouses; Documentation; *Educational Research; *Indexes (Locaters); Information Dissemination; Information Retrieval; Information Storage; *Microfiche; Resource Materials; *Technical Education; *Vocational Education

ABSTRACT

Documents announced with VT numbers only in the Volume 6 Number 2 issue (VT 020 046) of "Abstracts of Research Materials in Vocational and Technical Education" (ARM) are included in this microfiche set. Microfiche availability for these documents is shown on the ARM resume as MF AVAILABLE IN VT-ERIC SET. The microfiche set is arranged in the following sequence: (1) a Vocational Technical (VT) number index to documents in the microfiche collection, (2) the subject and author indexes from ARM, and (3) the full text of documents listed in the VT number index. The texts are filmed continuously in VT number sequence. (DE)

INTRODUCTION

This collection of microfiche consists of the documents which are announced with VT numbers only in Abstracts of Research Materials in Vocational and Technical Education (ARM), Vol. 6, No. 2, 1973. Microfiche availability is shown in the resume as MF AVAILABLE IN VT-ERIC SET. The documents are grouped in VT number sequence and filmed continuously as a microfiche set. These documents are not available on microfiche as individual items, but are obtainable only through purchase of this set, or from agencies who have this set and have the capability of reproducing microfiche. The microfiche set includes the following sections:

1. Vocational Technical (VT) Number Index to Microfiche Collection of Clearinghouse Documents Reported in ARM, Vol. 6, No. 2, 1973.
2. Selected indexes from ARM, Vol. 6, No. 2, 1973.
 - a. Subject Index
 - b. Author Index

The documents identified in the indexes with an ERIC Document (ED) number are usually available as separate documents from the ERIC Document Reproduction Service (EDRS). Information about EDRS Service can be found in ARM or Research in Education (RIE).¹ Items not available through EDRS will include a source of availability. The page numbers shown in these indexes refer to the locations of the abstracts in ARM Vol. 6, No. 2, 1973.

3. The full text of documents listed in the Vocational Technical (VT) Number Index to Microfiche Collection of Clearinghouse Documents Reported in ARM Vol. 6, No. 2, 1973

¹Research in Education is published 12 times a year. The first issue was no. 11, November 1966. Subscription: Domestic \$38.00 a year; foreign \$47.50. Single copy: Domestic \$3.25. Send a check or money order (no stamps) to the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

ABSTRACT - AS PART OF A MASTER'S THESIS, THIS
DESCRIPTIVE RESEARCH STUDY OF 297 GRADUATES
OF 16 CLASSES FROM 1960 TO 1970 AT A
PRACTICAL NURSING SC, (2) EDUCATIONAL
BACKGROUND AS A SUCCESS FACTOR IN NURSING,
(3) INCHOOL IN CENTRAL FLORIDA INTENDS TO
PROVIDE INFORMATION USEFUL FOR CURRICULUM
EVALUATION, DELINEATE AREAS WHERE CHANGES ARE
NEEDED, CONSIDER STUDENT SELECTION POLICIES,
STIMULATE FURTHER RESEARCH, AND RELATE
FINDINGS TO FACULTY ACCOUNTABILITY FOR THE
STATE EDUCATION DEPARTMENT. THE METHODOLOGY
CONSISTED OF A 32-QUESTION COMPUTERIZED -
SURVEY QUESTIONNAIRE, DEVELOPED BY A NURSING
ADMINISTRATOR AND A VOCATIONAL COUNSELOR,
INFORMATION FROM A CLASS RECORD BOOK,
INTERVIEWS, AND A PREVIOUS SURVEY. ANALYSIS
OF DATA, PRESENTED IN TABULAR FORM, REVEALED:
(1) AN URGENT NEED FOR CONTINUING EDUCATION
OF PRACTICAL NURSES, (2) CONCLUSIVE EVIDENCE ON THE
AGE FACTOR IN STUDENT SELECTION, AND (4) THE
NECESSITY OF ROLE CLARIFICATION AND
LIGHTENING OF WORK LOADS FOR JOB
SATISFACTION. LEADERSHIP SKILLS, PSYCHIATRIC
NURSING, EMERGENCY ROOM PROCEDURES, AND
ADMINISTRATION OF MEDICATIONS NEED MORE
EXTENSIVE COVERAGE IN THE NURSING
CURRICULUMS. A SYSTEMS APPROACH IS SUGGESTED
FOR IMPLEMENTING CURRICULUMS RESPONSIVE TO
STUDENT NEEDS AND RELEVANT TO ACTUAL JOB
SITUATIONS. A BIBLIOGRAPHY AND THE SURVEY
QUESTIONNAIRE ARE INCLUDED. (AG)

Accountability in Practical Nursing Education

Preface

Until you have measured it, you don't know

what you are talking about.

Lord Kelvin

U.S. DEPARTMENT OF HEALTH
EDUCATION & WELFARE
OFFICE OF EDUCATION
THIS DOCUMENT HAS BEEN REPRODUCED EXACTLY AS RECEIVED FROM THE PERSON OR ORGANIZATION ORIGINATING IT. POINTS OF VIEW OR OPINIONS STATED DO NOT NECESSARILY REPRESENT OFFICIAL OFFICE OF EDUCATION POSITION OR POLICY.

This is a ten year follow-up, descriptive research study of the graduates of one School of Practical Nursing in Central Florida, which has been designed to measure the behaviors of the graduates as accurately as possible. High hopes and deep convictions should not be the only criteria for evaluating educational effectiveness and attainment. The study should reflect individual differences and similarities as they relate to the performance of practical nursing.

Analysis and synthesis of data will provide some insight into the logic and content of curriculum offerings. Areas where change is needed should become visible.

Since this study deals not only with physical phenomena, but also with diverse social and psychological components, isolating causative factors and measuring variables precisely is exceedingly difficult. It is to be expected that many persons may disagree with some of the author's viewpoints and hypotheses, but presentation of reliable facts cannot be refuted.

Identification of problems to be answered will be attempted by presenting the results of this survey, and logical analysis will follow.

As Block points out, "misunderstanding of the present is the inevitable consequence of ignorance of the past."¹

Acknowledgements

To Miss Nancy Davis, a business education student, who was assigned to the Health Occupations Education office for an internship period, who typed stencils, looked up every address, mailed the forms, etc.

To Mrs. Margaret Nabors, Guidance Counselor at the Orange County Vocational School, who helped with the general design of the survey form.

To Mr. John Rehmund, Assistant Principal, for general support and guidance, who provided the students to make the IBM Cards and their teacher who graded their work.

To Mr. Harry Gilbert, who provided the funds for the study, and

To Mr. Stuart VanVoorhees, who provided the incentive and supplied the necessary secretarial service.

To Lt. Douglas Benander, who has given much assistance in the interpretation of the computerized data.

To Dr. John Ingram, who has given constructive help with the total effort.

Sincerely,
Etta Smith McCulloch

Introduction

Undertaking this descriptive research study into the activities and behaviors of graduates of Practical Nursing Schools is the result of a belief that these findings are of considerable importance to the members of the faculty of all practical nursing programs, to broaden and deepen their general fund of knowledge, improve their concepts of the real world for which they are preparing workers, and provide an opportunity for their professional growth. Society holds these teachers accountable for helping students become safe practitioners who are interested in the welfare of the individual patient as well as in their own professional growth in nursing. School administration holds these teachers accountable for the success or failure of the graduates.

Students hold these teachers accountable for selecting the learning experiences necessary for them to realize their aspirations and prepare them for nursing in the world of tomorrow. Hopefully, this study will help the teachers perform these services in a more enlightened manner and revitalize instructional procedures. It is also hoped that this study will shatter some entrenched pet ideas and attitudes and question some traditional practices regarding the depth of content in the curriculum, selection of learning experiences, and the means of assessing students' needs.

Willingness to appeal to facts for answers to problems rather than whims, habits, or expediency should increase teacher effectiveness and student achievement and create a more hopeful, healthful working climate.

1.

Complacency has halted progress in nursing education and research findings have been seriously lacking. Dissemination of present research findings has been inadequate and utilization of that which is available has been hampered by inadequate inservice education of faculty members. This study will provide some evidence on which sound judgments for future nursing education practices may be based. Trial and error methods of seeking solutions are not in order today, nor is reliance on dogmatic authority which will result in stagnation.

Some of the motivating influences precipitating this study were questions voiced concerning student selection policies and curriculum content. In a youth oriented society, are we accepting too many students in the upper age range? Are those graduates working? Are we accepting too many educationally disadvantaged persons? Are we preparing too many LPN's for the job market?

Objectives

The objectives of this study are to:

1. Provide factual, valid information with which to help evaluate the curriculum, particularly concerning amount of time spent on obstetrics, pediatrics, administration of medications, psychiatric nursing, leadership skills, surgical and emergency room procedures, and depth of content.
2. Delineate specific areas where changes seem to be in order.
3. Consider student selection policies as they relate to behaviors of graduates.
4. Formulate questions for further research (utilization of

Licensed Practical Nurses).

5. Relate findings to accountability.

Assumptions

Behavior of graduate Licensed Practical Nurses as used here means the activities of these persons as they go about caring for patients, their satisfactions, their eccentricities and their job attitudes which are the result of situational factors, interaction of working conditions, educational and environmental influences.

Assumption I. These behaviors relate to the curriculum offerings as well as to the individual's background and motivation.

- A. General classes of graduate LPN behaviors fall into clusters characterized by substantial intercorrelation within a cluster.
- B. The major clusters of behaviors have the characteristics of dimensions.
- C. Reliable estimates of graduates' behavior may be obtained through use of objective data gathered in some systematic manner.
- D. The behavior of graduates is characterized by substantial stability over considerable periods of time.
- E. The graduates' behavior is a function of the personal characteristics of the individual practitioner.

F. The graduates' behavior is a function of the general features of the situation in which it takes place.

G. The graduates' behavior is a function of the specific features of the situation in which it takes place.

Assumption II. These behaviors form the basis of an evaluation tool which the faculty may use to assess the effectiveness of its program offerings.

A. An implication here involves the belief that evaluation is a continuous process, which needs objective, rather than subjective concepts. Evaluation tools are very difficult to construct and use. Statistical data must be reliable and valid.

Assumption III. Certain curriculum changes may be needed and perhaps some changes were instituted which were ill advised.

A. There is an implied assumption that the reader recognize that certain facets of the curriculum are controlled by a legal body, the State Board of Nursing, which has certain regulations concerning the content of program offerings (i.e. most states require four weeks of pediatrics), which can only be changed by working through legislative channels, but many other changes could be made by faculty consensus

alone, which would improve the behavior of the graduates.

Assumption IV. School administration is now becoming aware of what students can offer the institution in the way of resources for the decision -making process and acknowledge that the student can and will accept responsibilities under the proper conditions.²

A. Most practical nursing students come to the program highly motivated and actively seek various learning experiences.

Most practical nursing instructors are concerned about the impact that one year of instruction has had on their students for several reasons. Some of these are:

1. Have the graduates been prepared to adjust to the real world of work in nursing?
2. Are they happy in their chosen work?
3. What kinds of nursing work are they actually doing?
4. Is the curriculum in need of adjustment?
5. Has the teaching been effective?
6. Are there jobs available and how often do they change jobs?
7. Do those that have the ability want to move upward or are they satisfied with their present limitations?
8. Has the quality of their life styles been improved?

Criteria for evaluating Schools of Practical Nursing have been developed by the Council for Practical Nursing Education of

²Dr. David G. Robinson, 'The Changing Student,' Florida Education Tabloid, Vol. 49, No. 3 (October 1971), p. 14.

the National League for Nursing. Meetings of this Council reveal a wide variance in the philosophy of nursing educators concerning the preparation and utilization of these workers.

Many factors enter into the assessment of every School of Practical Nursing. Some of these which are not considered in this study, but which have bearing on the performance of graduates are:

1. Quantity and quality of supportive services to the program.
2. Cohesiveness in faculty attitudes and practices.
3. Public relations.
4. Clinical facilities.
5. Physical facilities.
6. Instructional materials and library holdings.
7. Adaptability and flexibility of all concerned individuals.
8. Realism of the goals of the particular program.
9. Attrition rate.
10. State Board scores.

Summary

In essence, the group of graduates will chart its own course, concentrating on services it is able to provide, without diluting its energies in fruitless attempts to change health care systems. It is the responsibility of the faculty to determine the direction the group will take. Beside nursing is the very core of nursing practice and we claim that we are preparing a bedside nurse, yet examination of results of this survey question, "Do you have patient assignments?" will cause doubt as to whether or not we are in fact preparing this type of practitioner as claimed.

The Nature of Practical Nursing

Practical nursing has existed since the beginning of time in one form or another, but modern day practical nursing came into existence in the late 1940's to help ease the critical shortage of nurses. The concept was to free the Registered Nurse for the more complex nursing situations by preparing a worker who could function in relatively stable situations, with a minimum amount of supervision. This gave impetus to the team concept of nursing. Today's practical nurse is becoming a respected member of the nursing team and most hospitals and nursing homes agree that they could not meet today's health care service needs without this group of dedicated persons.

In all settings, the community, hospital, nursing home, physician's office and private duty, practical nurses are teaching patients, families and others in informal ways. This is an important and recognized part of nursing care activities. Vocational schools have developed curricula to prepare a bedside nurse, but many employing agencies expect more expertise in these workers which gives rise to dissatisfactions within the job situations. The LPN is not only a bedside nurse - she is often placed in leadership roles for which her preparation was inadequate. Many employing agencies spend a considerable amount of money on each new employee not only for physicals and orientation, but also for extensive inservice education. For this reason they select their employees with regard to the probable length of time they will

serve the institution. Employee dissatisfactions then cause additional expense and become a part of the skyrocketing costs of institutional care.

Factors which are considered in this study then relate to:

1. Employment opportunities.
2. Types of job opportunities.
3. Salaries.
4. Shifts worked.
5. Job satisfactions.
6. Satisfaction with school - the prevailing concepts and attitudes that make up the educational environment in which the teaching-learning process takes place.
7. Job turnovers.
8. Professional growth desires.
9. Student selection policies, attrition rate.
10. Curriculum.

Background of School

This Practical Nursing School came into existence through the efforts of several dedicated practical nurses who formed the first Advisory Committee and exerted the necessary initiative to influence the Board of Education to provide this much needed community service. Funds from the Keliogg Foundation Grant were utilized to purchase the necessary equipment and the Vocational School was selected as the appropriate site.

Contractual agreements were written with various clinical agencies and have been renewed annually. The philosophy and objectives were written and have been revised periodically. The curriculum was designed to meet the stated objectives. The first class began October 5, 1960. The program is one year in length.

The foundation period utilizes approximately one-third of this time, the balance being spent in clinical experience. The total hours in the program has been lessened from 1760 hours in the first class to 1440 hours in the sixteenth class and is now 1285 hours. The school became an agency member of the National League of Nursing in 1962.

A table with some pertinent information has been prepared to enable the reader to have a clear picture of the program and its effectiveness and will be found on page 11.

The name of the school has been omitted since, in Florida, all of the practical nursing schools have been patterned after

the State Department of Education's Curriculum Guide for Practical Nursing Education. It is felt that there are only very minor differences in the learning experiences provided by each school. It is therefore assumed that similar studies would reveal similar findings and that these findings should be of use to each of the schools.

Table 1. Pertinent Information About the School

Class Number	Number Graduated	Percent of Attrition	State Board Failures	Average State Board Scores	Range of State Board Scores	Responded to Survey Percent	Non-respondents over 45 on Admission
1	16	11	0	543	405-666	50	0
2	14	30	0	586	405-666	71	0
3	15	6	2	516	315-635	46	1
4	13	23	0	543	405-647	54	0
5	14	18	0	545	362-650	64	2
6	24	11	0	520	381-666	54	2
7	27	4	1	550	338-690	81	1
8	23	23	0	548	361-694	61	0
9	27	13	0	586	405-746	70	0
10	38	15	2	513	330-658	63	0
11	29	9	2	526	326-681	60	1
12	36	19	1	566	286-729	61	1
13	41	23	2	507	286-666	56	3
14	59	14	2	529	264-713	57	3
15	59	8	3	538	264-774	57	4
16	61	15	4	515	248-676	57	1

State Board scores for the first five classes were converted from percentage scores to numerical scores using the conversion tables provided by the State Board of Nursing in 1963.

Total number of drop-outs - 87, of whom 19 were over 45 on admission to school, or 22%.

Methodology

A cover letter and survey form was mailed to each graduate of the program by a business education student who needed actual work experience for reference purposes. This delightful young lady devoted much time and effort in locating correct addresses of the graduates in order to minimize the expense of the project.

The cover letter was designed to alleviate any threat or hesitancy which the graduate might perceive in the questionnaire. Each graduate had been personally known by the author and responses contained many personal letters and comments of an evaluative nature which will be summarized in this study. A copy of the cover letter will be found in Appendix I.

It was felt that hesitancy to respond to rather personal questions would be lessened if the respondents were not required to give their name. It is interesting to note that of 306 persons responding, only 16 persons decided to utilize that option (five percent). This fact has been interpreted as a "vote of confidence" for the instructional staff and will be discussed later in this study.

The questionnaire was designed by the author with the assistance of the Vocational Education Guidance Counselor, Mrs. Margaret Nabors. The format was arranged to facilitate the compilation of results. A copy will be found in Appendix II.

The design of the tool took into consideration many psychological factors:

1. Perception of sharing the objective of improving "their"

school.

2. A non-threatening chance to express their real feelings toward the program and their job.
3. Perception of themselves as having value and of teachers representing friendly forces toward them.

The tool also contained a few structural defects of which the researcher was unaware until efforts to obtain a read-out were made. Question number twenty had four parts, each of which should have had an individual number. Each question was designed to enable evaluation of some recurring problem or suspicion of a problem and to attempt to determine what relationship might exist between student selection policies, curriculum offerings and job satisfactions.

The questions were placed in a logical sequence, proceeding from innocuous, simple ones to those which were more crucial and evaluative in nature.

The study was intended to serve as an instrument of accountability for the State Education Department, which it does, but data revealed and their cross variables were made difficult to obtain due to these structural defects. To prevent repetition of this fault, anyone attempting such a study is urged to seek the competent assistance of a data processing specialist before the questionnaire stencil is cut, to eliminate these hazards.

As the questionnaires returned, IBM cards were punched by a group of evening "Office Machines" students. Their teacher prepared the format and graded the students on their performance. Later, a

program for the computer was prepared and a frequency tabulation^A was made. The cross variables were itemized and contingency tables prepared to show the interrelationships desired for the study.

Scope

The study includes the graduates of sixteen classes of practical nursing students, from 1960 to 1970.

Total number of graduates	496
Unable to locate addresses of	46
Number of forms returned	306
Forms grossly incomplete	6
Forms received too late for inclusion in computerized data	3
Total number in computerized study	297

The class record book was then utilized to give additional pertinent data, to determine whether or not any bias could be found among the non-respondents. This search revealed no feature which was consistent and since 61.7 percent of the universe responded, it must be conceded that the data revealed is indeed a representative sample.

Since the study was intended to be used as an evaluation of the total program, many personal interviews were conducted to shed enlightenment on the answers to questions number 21, 22 and 23.

The follow-up survey of 1965 was then utilized, to attempt to discover whether five additional years of practical nursing experience had, in any significant way, changed the behaviors or attitudes of those responding to both surveys.

Responded to both surveys	70
Responded to 1965 survey only	33
Responded to 1970 survey only	236
Total graduated to date of 1965 survey	146
Percent of response to 1965 survey	70

About the Author

The author is a graduate of the Mount Sinai Hospital School of Nursing in New York. Her experience background includes seventeen years as an Administrator and Director of Nursing Service and twelve years of teaching experience. She was employed by the Board of Public Instruction to begin this program in 1960. In 1964, she was appointed as Head of the Department of Health Occupations Education, in which capacity she served until September 1970. This paper has been prepared as a Directed Individual Study in Educational Research, which is a part of her Master's Degree Program of Study at Florida State University.

Rationale and Findings

"Don't judge a book by its cover!"

1. Present age: (a) 19-25 (b) 26-30 (c) 31-35 (d) 36-40
(e) 41-45 (f) 46-50 (g) 51-55 (h) over 55

The question of age is frequently presented as a criticism of practical nursing. This problem has been "cussed and discussed," as it relates to many behaviors. It has, therefore, been analyzed extensively in this study and presented with many cross variables in tables 2 and 3, pages 17 and 18.

These same tables show the frequency count and percentage of responses by age groups, to questions number 5, 6, 7, 8, 9, 10, 11, 12, 16, 17, 20, 21, 22, 23, 24, 28, 29, and 30. The questions numbered above twenty have been re-numbered to allow for computer program analysis. These new numbers appear in red on the copy of the survey form found in Appendix II and will be used throughout the remainder of this paper.

2. Date of graduation. Month and year.

The findings are reported in Table 1, page 11. This question was asked to provide an estimate of the length of time the graduate had worked to help evaluate her responses.

3. Are you licensed in Florida?
4. Are you licensed in state other than Florida?

These are shown on page 19 and were asked to assess the migratory nature of nurses.

Table 2. Responses by Age Groups for Questions 5 Through 12

Table 4. Where Licensed and Working

Survey Questions #3, 4, and 8 -

Where are you now employed?

Ten persons no longer hold Florida Licenses, but have them in other states and are working.

Questionnaires were returned from Germany, England, Canada, Hawaii, Alaska and many other states.

5. Are you currently employed as a Licensed Practical Nurse?

This was asked to justify the existence of the program.

It was answered on 295 forms. Of these, 230 (78%) are presently employed as LPN's, 65 (22%) are not. Of the 65 not working as LPN's, interviews reveal that:

11 are pregnant or caring for small infants;

4 are Registered Nurses, so employed;

10 are in RN training;

10 are ill;

17 are working in other occupations;

2 are in foreign countries.

11 do not want to work for various reasons- salary,

family problems, etc.

6. Have you been continuously employed as an LPN whenever desired?

(a) yes (b) no

This question was asked to determine whether or not we are "flooding the market" with our product. There were 291 responses. Employed whenever desired - 285, negative response - 6.

Of the six who answered "no":

2 are pregnant;

1 is in RN training;

1 had not passed State Boards;

1 was living in a state in which she was not licensed;

1 is doing private duty, but complaining because of an insufficient amount of work.

7. Have you been employed in an occupation (s) other than Practical Nursing since graduation? (a) yes (b) no

This information was sought to assist in determining the effectiveness of the program in meeting the employment needs of the graduates. There were 17 persons who indicated they have worked in occupations other than practical nursing since graduation, 276 have not. Interviews with those answering 'yes' revealed that four are now registered nurses, one is a nursing home administrator, one is a surgical technician, one is working in an orthopedic clinic, one is working as an industrial nurse, one is a police woman, one is in real estate, one is an insurance adjustor, one is managing her husband's restaurant, one is managing her husband's grocery store and delivery business, one is a cosmetics demonstrator and thres are homemaking.

From this data, it would appear that the practical nursing instruction was not wasted in most instances, even though the individual is doing something other than practical nursing.

8. Where are you now employed? (a) hospital (b) nursing home (c) doctor's office (d) private duty (e) other

This question was asked to determine the type of employment and its relatedness to questions one and ten. The findings are reported in Table 2 and Table 5 and shown on pages 17 and 22.

Where Employed	H o s p i t a l	N u r s i n g H o m e	D o c t o r O f f i c e	P r i v a t e D u t y	O t h e r	T o t a l
Number Persons	177	25	19	13	9	243
Less than 3 mo.	7	5	3	3	2	20
3 - 6 mo.	20	4	2	1	2	29
6 - 12 mo.	31	7	4	0	3	45
13 - 24 mo.	51	4	2	5	0	62
Over 2 years	68	5	8	4	2	87

The number of persons in this Table will be seen to differ slightly from the number indicated in Table 2 because not all persons answered both questions.

Table 5. Where Employed and How Long

9. Size of employing institution if applicable: (a) fewer than 50 beds (b) 51-99 (c) 100 or more beds

This question was asked to determine what relationship, if any, size of the institution had to:

1. Salary (question 14)
2. Giving medications (question 16)
3. Patient assignments (question 17)
4. Size of assignments (question 18)
5. Personal satisfaction (question 20)
6. Salary satisfaction (question 21)
7. Satisfaction with working conditions (question 22)
8. Satisfaction with employment opportunities (question 22)

Table 6 shows frequency count, frequency percentage and variable percentages for each size institution. Findings of interest here indicate that salaries in larger institutions are in general higher, but there is less personal satisfaction with the practical nursing occupation. The percentage of those who do not have patient assignments is greater in smaller institutions.

10. How long have you been with present employer? (a) less than 3 months (b) 3-6 months (c) 6-12 (d) 13-24 (e) two years or more?

This question was asked to determine whether or not the graduates were flitting from job to job, or if they are stable employees. This information has many ramifications.

Question Number	Size of Employing Institution	Under 50 Beds	51-99 Beds	Over 100 Beds
	Frequency Count	14	28	184
	Frequency Percent	6.0%	12.0%	82.0%
14	Salary - \$300-\$400/month		4.0%	1.3%
	\$400-\$500/month	84.6%	32.0%	23.9%
	\$500-\$600/month	15.4%	64.0%	74.8%
16	Medications-Oral Only	7.1%		2.3%
	Intramuscular Only			.6%
	Both	92.9%	100.0%	89.7%
	None			7.4%
17	Patient Assignments-Yes	38.5%	40.7%	61.5%
	No	61.5%	59.3%	38.5%
18	Number Patients Assigned- 5-10	16.7%	33.3%	43.2%
	11-20	50.0%	26.7%	31.5%
	over 21	33.3%	40.0%	25.2%
20	Personal Satisfaction-Yes	100.0%	100.0%	97.2%
	No			2.8%
21	Salary Satisfaction-Yes	63.6%	82.6%	80.5%
	No	36.4%	17.4%	19.5%
22	Working Conditions Satisfaction Yes	92.3%	91.7%	80.0%
	No	7.7%	8.3%	20.0%
23	Employment Opportunity Satisfaction-Yes	92.3%	95.8%	90.6%
	No	7.7%	4.2%	9.4%

Table 6. Size of Employing Institution with Cross Variables

The findings are shown in Table 5. Two-hundred and seventy persons answered the question. Of these, 46.7% have never changed jobs, 17.8% changed jobs one time, 17.4 changed jobs twice, 8.9% changed jobs three times and 4.1% four times. The remaining 5.2% have changed jobs relatively often. Each of the last 5.2% explained this behavior as having husbands in service or frequent moves because of husband's occupation.

11. If employed by hospital, on which of these services do you usually spend three-quarters of your time? (a) medical-surgical (b) maternity (c) pediatrics (d) nursery (e) other

This was asked to help determine if curriculum changes should be considered. Findings are reported in Table 2 and will be discussed in a later chapter.

12. On which shift do you usually work? (a) morning (b) afternoon (c) night (d) rotating (e) other

This also has implications for curriculum content.

Frequency count revealed that 84 persons work mornings, 69 work afternoons, 46 work nights and 43 work rotating shifts.

13. What was your beginning monthly gross salary (approximately)?
14. What is your present monthly gross salary (approximately)?

These answers reveal a wide range in salaries, from a beginning salary of \$125.00 per month for full-time employment, to three who reported presently earning over \$800.00 per month (two private duty and one nursing home administrator). Many persons chose to omit the answer to this question.

15. Each week you work (a) 5 days (b) 5½ days (c) 6 days
(d) more?

This question was asked to help evaluate answers to questions 13 and 14. Of the 240 persons responding, 186 work five days, 3 work five and one-half days, 15 work six days and 36 work more than six days.

16. Do you give medications? (a) oral (b) intramuscular
(c) both (d) none
17. Do you usually have patient assignments? (a) Yes (b) No
18. If applicable, how many patients? (a) 5-10 (b) 11-20
(c) 21 or more

These were asked to help evaluate curriculum content. Findings are reported in Table 6, page 24 and will be considered later.

19. If applicable, how have you secured private duty?
(a) registry (b) hospitals (c) other nursing bureau

Fifteen persons reported in question eight that they are doing private duty, however it is known that many staff nurses are asked to fill this need by doing a double shift or private duty on their days off. Many nurses find it necessary to supplement their income in this manner. The findings are as follows: registry - 25; hospitals - 19; nursing bureau - 2; other source - 3.

20. Has your work in nursing met your expectations in terms of personal satisfaction? (a) yes (b) no

This, the ultimate goal of every school, revealed that 273 persons find nursing has met their expectations in terms of personal satisfaction, 9 have not. Reasons given on interviews with these persons were as follows:

- #1. Salary insufficient for family's need
- #2. Interpreted this four part question to require a single answer. Is happy in nursing and doing a fine job, but feels that salary is not commensurate with job responsibilities. She is often placed in charge of a hospital unit, or has an assignment of 15-20 patients for total care.
- #3. Felt limited in practical nursing and is now a Registered Nurse.
- #4. Also interpreted the question to require only one answer and could not say "yes" to working conditions.
- #5. Misinterpreted question. Felt she was doing an RN's work for a low salary.
- #6. Loves nursing, but has developed a physical handicap (post-encephalitis epilepsy) and has difficulty holding a job. She had the encephalitis before entering the program, but the epilepsy did not develop until two years ago. She feels that employers are not empathetic enough with handicap and stated that her seizures are under control with medication. This is the young lady who reported

nine job changes. Her husband is in service and they have moved often.

#7. Enjoys nursing, but cannot tolerate seeing patients receive poor care due to excessive assignments.

The two other persons did not give their names, so could not be interviewed.

21. Has your work in nursing met your expectations in terms of salary? (a) yes (b) No
22. Has your work in nursing met your expectations in terms of working conditions? (a) Yes (b) No
23. Has your work in nursing met your expectations in terms of employment opportunities? (a) Yes (b) No

These findings are reported in Table 6, page 24 and have implications which will be discussed later.

24. Did the curriculum offerings of your training meet your need as a beginning licensed practical nurse? (a) Yes (b) No

This question is probably the most significant of all for the purposes of this study. The findings are reported in Table 7, page 29. The fifteen negative responses include eight who omitted the answer to the question. The comments of the seven who actually said "no", are as follows:

#1. (graduated in September 1968) "I went to work in a nursing home and had to do a male catheterization which I had never seen."

#2. (graduated in October 1961) "I think each student

[illegible]

	<u>Yes</u>	<u>No</u>
24. Did curriculum offerings of your training meet your needs as a beginning practitioner?	291	15
25. Too much theory?	19	275
26. Too little theory?	38	249
27. Have you attended any formal education program since graduation?	97	197

29

needs to know how important it is to really study hard and learn all she can. Spelling and good knowledge of terms is most important. Each student needs to know how to smile." (This same student had answered the same question on the 1965 survey in the affirmative)

- #3. (Graduated in September 1966) This graduate answered 'yes and no,' but it was counted as a negative answer.
- "Leave off the Civil Defense program. Do many more dressings, PO and IM medications. Charting was a big problem. I didn't know what to chart or how to spell it. The term paper took up a lot of good time that could have been spent otherwise. The girls need to work the ER and Surgery. In a small hospital, an LPN does everything and it helps if you have at least seen it one time and know how to set up, etc. Stress professional attitude! Know when to speak and when to be quiet!"
- #4. (Graduated in September 1969) "I feel the curriculum offerings did not meet my needs as a beginning LPN because I went to work on isolation and I did not have enough isolation training. I feel I could have used more training in this field."
- #5. (Graduated in September 1969) "The class I attended was much too large. Some of the teachers had different opinion[s] on instruction of students. More organization of staff need[ed]. Starting in the Doctor's office, I

felt very insecure. For me, I am very fortunate to be working for a doctor who has patients [sic] and understanding and has taught me very much, such as taking x-rays and doing laboratory work."

#6. (Graduated in January 1969) "I was under the impression that LPN's were not to be charge nurses. Everywhere I go, LPN's are put on floors as charge nurses, sometimes without RN supervision. We need to be taught more of supervising and being in charge of floors. I also believe classes should be made longer (1 1/2 - 2 years) and there should be less students in a class or more teachers to take on [sic] or teach smaller groups."

#7. (Graduated in September 1969) "A more advanced course on Drugs and Solutions. Needed more instructors for the amount of students enrolled. The shortage of instructors short changed some students in the training they needed for being a licensed practical nurse."

"Were these persons given adequate guidance in identifying the relationship of their learning experiences to the behavioral objectives of the program? Are the goals of the program realistic?

25. Do you feel that the curriculum offerings contained too much theory? (a) yes (b) no

26. Do you feel that the curriculum offerings contained too little theory? (a) yes (b) no
27. Have you attended any formal education program since graduation? (a) yes (b) no
28. Do you plan on furthering your education in nursing? (a) Yes (b) no

Selection of appropriate careers required two types of knowledge: self-knowledge - assessment of one's skills, aptitudes and learning capabilities; and job knowledge - a combination of skills required for successful performance, shifts in employment opportunities and projection for new careers or knowledge of alternatives.³

Vertical worker mobility has been slow to develop in the health field. There is an attempt to develop career ladders and lattices and to improve coordination among programs.

Of the 306 respondents, 159 plan on furthering their education in nursing (fourteen of whom are already in RN school), 113 do not. Of the non-respondents, it is known that fifteen have completed RN training (twelve Associate Degrees, two B.S. Degrees and one Diploma School) and are employed as Registered Nurses.

29. How many times have you changed positions since graduation?

³ Joseph E. Hill and Derek M. Nunney, "Career Mobility Through Personalized Occupational Education," American Vocational Journal, Vol. 46, No. 7 (October 1971), p. 36.

30. Are you a member of your local practical nurse association division? (a) yes (b) no

These findings are reported in Table 3, page 18.

31. Comments: Please be specific in any suggestions or criticisms. We need your reactions.

As educators become more aware of the contribution which students can make in the design of their program, more attention will be paid to comments such as these found in this study. There were 196 comments received and 110 forms received without any comment.

Of the 196 comments, 121 indicate great pride in their school regarding curriculum and instructors, as well as pride in comparing their knowledge and ability with graduates of other schools with whom they have worked. Many of these expressed concern about need for a career ladder, as they are motivated to continue nursing education. Of the remaining 75, three were frankly critical of the instructional staff; thirteen expressed dissatisfaction with working conditions (patient load and responsibilities beyond preparation); thirty believe that more time should be spent on pharmacology; eleven expressed concern over teacher-student ratio (classes too large, too few teachers); eight persons think the material to be covered needs a three or four month extension to the program; five persons felt the need for clinical experience in the emergency room; seven were critical of the amount of

time spent on history of nursing, dietetics, mathematics, civil defense, term papers, etc.; eight believe there should be more psychiatric instruction and leadership skills; two believe that some instruction in cardiac care should be included; and nine express need for more extension courses, better books, experience on all shifts, more isolation techniques, more charting, heavier student assignments during last month in clinical area and career ladders which allow credit for LPN training.

32. What, if any, scholarship assistance did you receive?

Describe:

The Florida State Department of Education, Scholarship Loan program awarded 32 of the respondents \$300.00 each, the loan being repaid by working one year in the State of Florida. Altrusa International provided six Founders Fund Vocational Awards on the basis of need. Vocational Rehabilitation sponsored three persons. Fifteen others received help, on the basis of need, from twelve other sources.

One final comment from a graduate to summarize this chapter: "Next to my marriage, this course was the best thing that ever happened to me!"

Analysis of Data

A story is told that once upon a time a scientist was studying the behavior of trained fleas. He removed a right leg and told the flea to jump. It jumped towards the right. He then removed another leg, whereupon it jumped again when told to, and each time he removed a leg the flea jumped when told to do so. Finally he removed the last leg and told the flea to jump. Since it did not respond, he summarized his experiment by saying that removal of all legs damaged the flea's ability to hear. Hopefully, the following material will not be this absurd and fallacious.

Abridgement, condensation, and selection of pertinent data for analysis from the mass amount of material available in this study has been purely subjective.

Implications for change of student selection policies concerning age and educational background are reflected in this study. The age of the graduate then becomes the first subject for discussion. Of the nineteen who failed boards, only one was over fifty, while eight were in the 19 - 25 age group. The school's attrition rate, while low, was increased by the dropping of nineteen of those who were over 45 on admission to school, yet this number comprised only 22% of the total attrition rate.

Data revealed in this study do not actually support justification for any change in the existing policies concerning age of applicant. Based on Table 2, we see that a greater percentage of those in the upper age brackets are working as LPN's and that work

is available for them. They have not deserted the occupation (which in this author's opinion indicates motivation and devotion). Recognizing the nature of practical nursing, it is surprising that we find more than 64% of those over 40 are working in hospitals and that 60% of those have patient assignments which are very large. The over 55 age group, although few in number, are markedly stable employees, 61.5% having worked over two years at the same job, and 53.8% have not changed jobs even one time since graduation. They are working on all shifts, but 53.8% are working the least desirable hours - 3P.M. to 11P.M. 100% of them are giving both Oral and Intramuscular medications and 100% report that their work in nursing has met their expectations in terms of personal satisfaction and employment opportunities. Their responses to the question concerning satisfaction with school indicate that they feel that more emphasis should be placed on administering medications, psychiatric nursing concepts and emergency room nursing. Only 18.2% indicate that they are desirous of becoming RN's, implying that they believe it would not be worth the effort to them. Over one-third belong to their professional organization. This is related to many factors:

1. This is required if they are doing private duty nursing.
2. Financial state of family.
3. Interest or desire to be a part of the policy-making group for their occupation.

Data revealed in this study has implications for selection policies concerning educational background as a potential for

success in nursing. Of the 306 respondents, over 62% were high school graduates, and of these, a large percentage indicate that they wish to further their education in nursing. An accurate figure could not be obtained in this study because nine of these who chose not to give their names indicated they wished to further their nursing education.

Very probably some of them should have been channeled into an associate degree program to start with, rather than now finding that there are virtually no programs which will allow them suitable credit for the 1400 hours they have already put into preparation for nursing. Many of these persons entered the practical nursing program because they were denied admission to an RN school, or because they had discontinued, or been dropped from registered nurse programs for one reason or another.

The data supports the hypothesis that selection policy changes are in order if more than half of the graduates are not considering this program as a terminal education endeavor. Within nursing, this is an acute problem because each level of program is considered to be a terminal one for the majority of its graduates, yet it must prepare some to proceed expeditiously to the next level of attainment.

As science and technology continue to change the nature of health care, emphasizing more specifically the provision of quality care, it is often stated that "Nursing" must immediately take responsible action to see that a sufficient quantity of properly prepared persons become available to meet the needs of

this nation. The Surgeon General's report in 1960, the report of the National Commission on Nursing and Nursing Education in 1970 and the reports of many other studies of nursing and nursing education all concur that the most urgent need for provision of quality health care services depends upon a substantial increase in the number of Registered Nurses. We must find ways to provide continuing education for LPN's!

The data also supports the hypothesis that practical nurses are dissatisfied with the ways they are being utilized and that their ability to give good patient care is being hampered; partly because nursing education and nursing service are worlds apart, and partly because their role on the health team is unclear. The personal satisfaction with nursing, which the graduate relates to patient care and her ability to provide good care, is being eroded in the clinical situation when she is assigned to total care of over twenty patients, twelve of whom are in need of complete bed baths and being fed! According to Dr. Jerome P. Lysaught, these intrinsic rewards are more important to nurses than greater pay and this author heartily concurs with that belief.

Implications for Curriculum Changes

In the final analysis, every faculty should identify the specific activities which produce behavioral changes in the students and which prepare the graduates for their jobs. They must also analyze the needs and requirements of the occupation and identify the skills which the graduates will need for successful performance. The problem of timing is critical in all phases of program planning and implementation. What is done is no more important than when it is done. Many faculties use two general approaches to develop the specific, effective components of the curriculum. The first approach involves initially selecting and combining a variety of experiences which seem to be rational for producing desired results. The subtractive strategy is to drop out individual components and assess the effect of their absence. Those experiences which can be left out without lowering performance are deleted and the curriculum program eventually contains only those items which are necessary for effectiveness.

The second approach is essentially additive and starts with a limited set of activities and gradually adds those which are thought to increase effectiveness. While it is understood that these methods are not particularly educationally sound, because of a lack of research, faculties have had no tools to measure the effects of specific experiences.

Present day research indicates that many schools are using a systems approach to curriculum development. Once the job is

analyzed, performance (behavioral) objectives will be formulated, and educational strategy to meet the objectives developed, implemented and continuously assessed. Selection criteria will be established so that competencies the students have and competencies needed by the occupation will match. Inherent in this approach to curriculum development is the selection of appropriate teaching methods to meet the individual student's style of learning. Also inherent in this approach is provision for re-cycling the student who learns more slowly, or has special needs. It is unrealistic to expect every student to arrive at the desired level of achievement in exactly the same time. It is perhaps important to mention here that of the nineteen State Board failures (4% of total number of graduates to date) reported in this study, 31.5% were white, 68.5% were non-white. This entire group obviously needed different methods and materials to meet their needs.

This study seems to indicate that certain curriculum changes are in order. For example, with only 6% of the respondents working in obstetrics, is six weeks of obstetrical clinical experience justified? With only 4.5% working in pediatrics, is four weeks of clinical experience justified? With 92% giving both oral and intramuscular medications and with many of the comments relating to desires for more medication administration instructions, should this area of instruction not be broadened and deepened?

Consideration of the total number of respondents who do not have patient assignments (101 persons, 43.6%) indicates that if we are in fact gearing curriculum toward preparation of a bedside

nurse, we had better make some attempt to provide this group with learning experiences directed toward their jobs. In the main, these people are being used as charge nurses, team leaders or medicine nurses, yet our curriculum does not contain even basic leadership skills.

Furthermore, with only 34% of the respondents working the day tour of duty, is it rational for schools to delete 3-11 and 11-7 student experience? When we claim to be producing a team member, can we justify a curriculum in which, at no time, is the student allowed to experience full membership on a team?

There is no justification for continuing to do things in a traditional way which is time consuming and inefficient in achieving goals, or to change for the sake of change alone. When students feel the need for and request these experiences, we cannot justify the omission of them from the curriculum. Lack of control over important components of these learning experiences has led to frustration on the part of students, teachers and employers. The students of practical nursing are adults and should be more involved in planning their program and faculties should become more responsive to the expressed desires, both of the students and their potential employers.

By no stretch of the imagination can faculty responsibility for provision of adequately prepared practitioners be turned over to the newly developing in-service education departments in employing institutions. In fact, many institutions do not even have such a department!

"In nursing, inservice education has as its objectives the provision of a better quality of nursing care, achieved through a better quality of nursing performance.... Inservice education ought not be designed to replace or remedy pre service education.... All too often, inservice education is burdened with making up deficiencies in the pre service educational programs. They must teach the nursing job almost from the ground up." ⁴

The author holds the belief that practical nursing is and always will be the first level of nursing education and that all practical nursing faculties must accept this premise and recognize that they are individually and collectively accountable for providing learning experiences for each student which will prepare the graduate for making safe, effective judgments in her job.

⁴ Dorothy Louise Ellison, R.N., "A Rotation Experience Helps Educate Nurses," Hospital Management, Vol. 105, No. 2 (Feb. 1968), P. 72.

Summary

Hopefully, the objectives of this study have been met - provision of factual information, delineation of areas where changes seem in order, consideration of selection policies, utilization patterns and faculty acceptance of the concept of their accountability for the success or failure of the graduates. Such studies should be made of many schools for comparison and validation of findings. These could be powerful tools with which the legislators in our state could resurface the road to attainment of national goals to provide adequate health care for all, and provide continuing reappraisal of the role and function of vocational, technical, and adult education in our homeland.

Wrong opinions and practices
gradually yield to fact and argument;
but facts and arguments,
to produce any effect on the mind,
must be brought before it.

Dear Graduate of Orange County Vocational School Practical Nursing:

The State Department of Education and the State Board of Nursing have requested that a survey be made to determine the effectiveness of our program.

We are sending this questionnaire to each graduate, since we believe that your answer to these questions are our only means of doing this. You may fill in your name or not, whichever you desire to do, but please do return the form at your earliest convenience in the enclosed envelope.

We sincerely appreciate your cooperation in this endeavor.

With kind personal regards to you and your family.

Sincerely,

Etta S. McCulloch, R. N.
Head, Department of Health
Occupations Education

INTRODUCTION

The information contained in this publication was developed at a workshop for guidance counselors from the Nashville Metropolitan senior high schools. The purpose of this workshop was to broaden the counselors' understanding of the educational opportunities of less than four years or baccalaureate degree level.

Past workshop experiences and visitation programs seem to indicate that the majority of the secondary school counselors possess adequate competencies in counseling with the college-bound and the potential college-bound students. These same experiences also indicate that many of the secondary school counselors are severely handicapped when counseling with those who do not plan to pursue the baccalaureate degree program. Many efforts have been instigated to assist the secondary school counselor to attain background experiences and to develop competencies in those areas that indicate deficiencies. Tours have been conducted through technical institutes, area vocational-technical schools, industries, businesses, drive-in conferences, visitations with the counselor in his own setting, assembly program presentations, etc. Each of these activities has contributed to the broadening background, knowledge, and understanding. However, it appears that workshop activity directed specifically toward alleviation of the above-stated deficiency has been the most effective approach.

EDUCATION FOR THE WORLD OF WORK

Edward L. Weld, Director
Nashville State Technical Institute
Nashville, Tennessee

We wish to welcome each of you to the Nashville State Technical Institute. We consider that the guidance counselors are the most important professional group in informing students about and directing their attention to Nashville State Technical Institute and Nashville Area Vocational-Technical School. For this reason, you have been invited to our first seminar on vocational and technical education. If there is anything we can do so that your attendance at this conference will be more enjoyable and more rewarding, please let us know.

"Education for the World of Work" is the single most important theme today. There must be a job in every person's future. We cannot afford to have unemployed people. The only goods and services which we will enjoy are those which we produce. Our objective should be economic independence for everyone; this objective rests on the ability of a person to be a producer of goods and services for which he can receive fair compensation.

There are persons who sincerely believe that our salvation--the salvation of our industrial nation--depends on vocational and technical education. I think that this is an overstatement; however, I do believe that the solution to many of our most important social problems rests with vocational and technical education.

Today the young people 16 to 19 years of age are the greatest single group of unemployed Americans. Twenty-seven percent of all unemployed are in this 16-19 age group. The unemployment rate in the age group 16 to 24 is approximately three times higher than the unemployment rate of older persons.

All of our social problems, such as delinquency and crime, are closely related to unemployment. These young people must be prepared for employment and useful lives. We need the productive capacities of every person who is physically and mentally able to work if we expect to support the number of persons who by necessity must be on welfare.

We know that for the United States only 50% of those students who graduate from high school continue their education in a college, vocational school, technical institute or any other post-secondary school. Also, we know that of those students who enter college only 50% of them graduate with a bachelor's degree. Only 20% of the young people in the United States receive a bachelor's degree. This means that education must be made available for this other 80% who are non-bachelor degree students so they will be prepared for employment.

I believe that every student should acquire a marketable competence before he leaves high school. The New York Public Schools have already taken the first step in this direction. They have abolished their track system and every student is now required to complete a vocational education course in order to graduate from high school. The Nashville Metropolitan School System has taken the first step in this direction by establishing the McGavock High School, a comprehensive high school offering vocational and technical programs. Other comprehensive high schools, offering vocational and technical training, are planned by the Nashville Metropolitan School System.

The Nashville State Technical Institute is preparing students for the World of Work. Our educational programs at the Nashville State Technical Institute could be classified in three categories:

First, we offer two-year college-level programs for the preparation of technicians. These programs leading to an associate degree are offered both during the day and in the evening. We are now offering Business Data Processing Technology, a program which prepares students to use the computer in keeping business records, and five Engineering Technology Programs: Chemical, Electrical, Electronic, Industrial and Mechanical. Industry has the greatest need for students trained in these programs. Since there has been a high demand and a short supply of technicians, the salaries of technicians have been high. The average beginning salary of 1970 graduates of two-year engineering technology programs was \$600 per month or \$7,200 per year.

Second, we offer remedial work in mathematics, physical science, reading and English for students who are not prepared to begin college-level courses. About 50% of the students who enter a technical institute in the United States--and our experience at Nashville Tech is about the same--require remedial work in one or more subjects. Our objective is to help as many students as we can so that they will become technicians and productive citizens.

Third, we offer both our associate degree courses and special courses to improve the competence of employed technicians and to retrain employed technicians for another position or a better position. We are authorized by the State Board for Vocational Education to offer courses to meet the needs of industry.

During this seminar, you will hear more about our programs and courses from the teachers who are the persons best qualified to give you this information. During our coffee breaks, I hope to visit with you and try to answer any questions you may have about Nashville State Technical Institute.

A few years ago Nikita Khrushchev beat the table with his shoe at a meeting of the United Nations and shouted that our grandchildren would live under Communism. I pray that our grandchildren and Mr. Khrushchev's grandchildren will enjoy the freedom of our democratic system. If we work together to prepare students for the World of Work, I believe that God will answer this prayer.

WELCOME & ORIENTATION

Mr. Jack L. Sandlin
 Superintendent
 Area Vocational-Technical School
 Nashville, Tennessee

I'd like to say to the group here that it's a genuine pleasure on behalf of the Area Vocational-Technical School to say hello. I'd like to respond before I start to Mr. Ed Weld, my neighbor, and to say that he did one of the nicest opening addresses that I have had the pleasure of hearing, here or anywhere else.

We truly have a wonderful opportunity out here to be identified with this World of Work. I think sometimes that maybe this phrase gets worked, not overworked ever, but well worked. We are identified with training people for the World of Work, and I like to think of our program over at the Area Vocational-Technical School as the bridge between man and his work. It is a different level. This is one of the reasons for having you here, so that we hopefully will be able to identify and to get closer together toward joining hands in the direction of this World of Work.

I have here four brief purposes. (As Mr. Weld stated, this will be recorded.) I plan to have this as a handout when you gather over at the Area Vocational-Technical School on Thursday. But to assist, to help, in identifying the two areas, to separate to the extent that we would like them to be separated--and that's very little because you will find the twine is interwoven between the two as the week goes along. But I would like, with your permission, to read the role and scope of the Area Vocational-Technical School and brief comments on it.

There are four headings. They are:

- (1) Introduction and Statement of Purpose. Most of you have heard them; you know them; but we finally have it down in a few words.
- (2) The Definition of an Area Vocational-Technical School
- (3) Methods of Operation and Administration
- (4) The Persons to be Served in Admissions Requirements

Those are the four basic headings.

Under Introduction and Statement of Purpose, the General Assembly of the State of Tennessee in 1963 directed the State Board for Vocational Education to locate, establish, construct, and operate a state-wide system of Area Vocational-Technical Schools. The intent of this legislation was to meet more adequately the occupational training needs of citizens and residents of the State. This includes employees and future employees of existing and prospective industries and business.

Number 2, Definition of an Area Vocational-Technical School. An

Area Vocational-Technical School is an institute which serves people in a broad geographical area consisting of two or more counties offering occupational training of less than college level. Now that's a key phrase right there, and I hope that you will become more conscious of it as the week goes on--"less than college level."

3. Methods of Operation and Administration. The Area Vocational-Technical Schools are administered by the State Board for Vocational Education and may be operated directly by the State Board for Vocational Education or by contract with:

- (1) any local board or boards of education in any county, city, or special school district;
- (2) any county or counties, or municipality;
- (3) any other agency, any other public or private body, board, foundation, or agency; or
- (4) any individual or group of individuals as the State Board for Vocational Education may deem necessary.

4A. Persons to be Served in Admission Requirements. The Area Vocational-Technical School may provide occupational training of less than college credit for high school youth, school dropouts, adults needing retraining, the handicapped and disadvantaged, the older workers, apprentices, and other employed learners and employed workers.

4B. Admission Requirements. Any resident of Tennessee who is a high school graduate or who has legally left the full-time school and possesses certain basic aptitudes and interests may be eligible for admission. Selected high school students, 16 years of age and above, may enroll upon special agreement between their respective local boards of education and the State Board. Credits earned shall be granted by the local high school upon recommendation by the local Area Vocational-Technical Schools. Persons desiring to take a course must file an application for admission. All full time students will be required to take the General Aptitude Test Battery. After the completed application form is received and the results of the aptitude test evaluated, an interview and counseling session will be arranged with each applicant. Applicants accepted may enroll in occupational training courses at any time a vacancy exists. That's a short and rather to the point and very brief comment on two or three requirements to help set the thinking for the week in order.

Under number 2 where we said "training of less than college grade." It is interesting to note that the present enrollment of the Area School is 541 as of this morning; there were twelve new ones being registered when I left over there a few minutes ago. Of that total enrollment, over 85 percent are high school graduates or better. This is a figure that has stayed constant since the day we started it, and it's just been an interesting one of those little things that has happened; it wasn't planned that way.

As most of you know, under number 2 where we said "methods of operation and administration," we've had the pleasure of serving

the Area School program here under three of those. It started in 1963 under the then City Board of Education. We went through that one and into the Metro program, and then from there to a state operation and effective this past April, April first of this year, we became a full-fledged state operation having no connection with the Metro Board of Education. But it has been a genuine pleasure to have been exposed to the others, something that the fellows that have gone directly into the state programs could not enjoy.

I had the pleasure of working with Mrs. Pease and two or three of the other counselors that I see here that I would have missed being so close with had I been a state operation to begin with; so it was a pleasure.

Persons to be served and Admissions Requirements are fairly clear. I would like to state here that we have three distinct type programs. Number one is the full time programs. These are six hours a day, five days a week, for the duration of the course of training, whatever it might be. Then we have the supplementary programs which are for people who are employed and who wish to upgrade themselves in their particular skills. Most of these meet in the evening; it's not required that they do; they can be either day or evening. And the part-time preparatory which is for people who are employed but are unhappy in their present employment and for some reason cannot attend a full time program but they can go in most cases four hours a day, four or five days a week to learn a new skill.

You will find quite a mixture of programs, quite a mixture of people. We, at present, have 21 different programs operating. We'll not name those; you'll see them shortly; and I, like Mr. Weld, hope to be wandering around so much and so closely involved that if you have questions or want to identify one of the odd ones, don't mind saying so.

We will be looking forward to a most enjoyable week, particularly from over across the street on Thursday and Friday when we'll have an opportunity to have you there in the building talking with the instructors that are in charge of the various programs who are truly the knowledgeable ones.

Thank you very kindly and enjoy the week.

ORIENTATION

Mr. Guy Phipps
Registrar
Nashville State Technical Institute
Nashville, Tennessee

Thank you Mr. Sandlin. I thought Mr. Weld and Mr. Sandlin did an excellent job welcoming you to our two institutions. Several of you I know. I've been in workshops with you in my former position as State Supervisor of Vocational-Technical Guidance, and I am now Director of Admissions and Records here. I don't know how much I helped any of you in my former position; I hope I can help you more in this position.

We deliberately did not introduce Mr. Weld and Mr. Sandlin this morning because we wanted a setting of informality. We want this to be very informal; we want you to enjoy yourselves. If those ties get a little tight, just loosen them up and really relax and enjoy yourself and become part of our institutions here. Just don't come barefooted; any other way will be just fine. Let's form a real partnership this week if we can, and I think we can. I think you'll find that most of our people, I think you'll find that all of our people, at both institutions are here to help in any way. Please feel free to be just downright nosy. If you want to know something, interrupt and ask us. Now I can't answer you, but I'll find the answer if you ask me and I'll find it someplace in the building. I've been here about two months, and I've asked more questions than I have all the rest of my life put together. I have been real fortunate in having the questions answered for me.

You'll see this week we are in a period of final examinations so you'll see some harried, hurried young people buzzing around here. (I should have added worried to it.) But they are in a period of final exams the 7th, 8th, and 9th, (today, Tuesday, and Wednesday), they'll be out the last two days so you won't see a great many students around here; but I think you'll find them to be rather friendly also.

We want you to enjoy this week as much as you possibly can. I know you are just completing a hard year's work; I realize this. We set the seminar dates at this particular time for several reasons. One is so you could get it over with and you could have the rest of your summer

Mrs. Pease and Dr. Greenberg have just been wonderful in working with us on this. In fact, without them we couldn't have set this program up. The time schedules are pretty rigid; however, we don't want to feel that we have to stay right with these things. We want this to be a real week, as I said, of informality, just enjoying yourself and trying to get the most we can out of it. Any time you have a question, just pop up and ask it. We will stay fairly close to this schedule on some things, such as breaks. We will stay fairly

close when we have guest speakers come in. I'll be the luckiest man in town if they all show up.

Now, before we register and two of our other people talk to you for a few moments, we have some programs, a list of participants, and a little pretesting that will take you about two minutes to do. We would like you to do this just as honestly as you possibly can. We've got the objectives of the workshop that we'd like for you to look at and to have because we'll ask you some questions about those later on. And what's most important, we have your meal tickets for the week. We have your name tags too, and we'd like for you to pick those up. The next person on the program is your wonderful and fine supervisor in the Merro system, Mrs. Pearce.

RESPONSE TO WELCOME

Mrs. Dorothy Pease, Supervisor
Guidance, Metro School System
Nashville, Tennessee

Mr. Weld, Mr. Sandlin, Dr. Greenberg, Mr. Phipps: I think that the main thing that I would like to say this morning is to express my appreciation and the appreciation of the group for the opportunity to participate.

We have used both the Area Technical and the Area Vocational School a great deal for our graduating seniors. We look forward to the day when we can use it even more. And Mr. Weld, you said today two things: "economic independence for everyone" and "all students must have a marketable skill." I hope that within the five days that we are here as a group and as counselors that we will be able to have a better understanding of the counselor's role in this particular program and in career development.

Again, our appreciation at the opportunity to participate. Thank you very much.

INTRODUCTORY REMARKS

Dr. Gilda Greenberg, Associate Professor
University of Tennessee at Nashville
Nashville, Tennessee

I would like to thank the people who helped to bring about this seminar for school counselors. The cooperative efforts, on the part of Mr. Weld, Mr. Sandlin, Mr. Phipps, Mrs. Pease and Mr. Dunn, were instrumental in creating the fine program in which you will participate.

I am committed to the fact that counselors should be made aware of every opportunity that is available for all of their students. Therefore, we must look into every aspect of vocational development and choice.

At a special conference on Vocational Aspects of Counselor Education in Virginia in 1965, several important counselor competencies were formulated. I have duplicated these for your information and would like you to examine each one carefully to find out your individual counselor quotient. How do you rate? Can you meet these competencies? If your score is perfect, then you are already a master counselor. If not, then perhaps this seminar will provide you with the opportunity to improve.

As a counselor educator I want to become part of this group, but I also want to attempt to be the facilitator of learning. We can then develop ideas together and perhaps consider various hypotheses for becoming more effective with the people we serve.

One of your assignments for Problems in Educational Psychology and Guidance (Ed. Psych. 5850) will require that you try to be as creative as possible in planning some new phase of your program in vocational counseling for the next school year. In the fall, we are going to follow up to find out what you have done. The success of this seminar will depend upon the changes made by you to assist your counselees.

(At this point mimeographed materials and outlines were distributed and discussed.)

We are here today because we are going through a social revolution that is of great significance to the school counselor. It is essential that we view our new role as agents of change. Our counselees, more than ever before, need to make their own decisions and develop skills to accept alternative actions.

The employment market is becoming increasingly difficult, even for the Ph.D. Therefore, the knowledge you gain here should be of some assistance in your work with students, parents, and those who are influential in the lives of these young people.

I want to thank you for joining us in this seminar and we are certain that the coming days will prove to be beneficial to all who participate.

NOTE: See Appendix, Pages 146 - 154 for Handouts.

MOTIVATION, EXIT LEVELS, LEARNING AND TEACHING

Harold Gregory, Director
Curriculum and Instructional Services
Division of Vocational-Technical Education

Thank you, Mr. Phipps, Dr. Greenberg. Mr. Sandlin, of course, is here to watch me, to make sure that I do everything right. One of my instructors is in the audience, Mr. Dorris. I taught at Hendersonville; that's what I kept telling him when he was principal there. Really, all I did was call the roll, but I got a salary anyway. Finally he got me on the right track of teaching.

I appreciate the opportunity of being here and the tremendous job that you in the field of guidance and counseling have performed and will be performing, I know, in the future. We develop new programs where there is something other than a university level exit. I think we are very fortunate in the State of Tennessee to see developing the many avenues and channels for education. During the past ten years, maybe five, there has been a rapid growth of the industrial atmosphere in Tennessee. Some of the largest plants in the South are located in Tennessee. We had a workshop about two weeks ago at Tennessee Eastman, the largest company in the state and the largest in the Mid-South. We had the opportunity to look at their educational program. So through this rapid growth of education in the State of Tennessee, we have had a rapid growth in our educational facilities, philosophy changes, directions, all types of avenues.

Any educational program you start, there's pros and there's cons. This reminds me, and Mr. Dorris can tell you, all my family are involved in education in some way. He says my father was the first one who gave him a whipping in school. But anyway, during the depression, Uncle Jack was looking for a job. They were scarce; one of the superintendents told him there was a job, a rural school, that he could have. But, he said that with this job you'll have to please the board member. So Uncle Jack went to the board member and the board member said, "Yes, we have a job," and you can imagine what type of board member, "but," he said, "we don't want just anybody teaching, and I've got a question I want to ask. I want to know, do you teach the world round or do you teach it flat?"

Now Uncle Jack wanted the job real bad; it was during the depression. So he thought a little while and said, "I can teach it either way; which way you want it taught?"

I'm afraid that a great deal of our education depends upon our own viewpoint, our own philosophy, and is it based on facts, needs, etc.? Or is it based totally on our experience?

Abraham Lincoln, who is considered the Father of Vocational-Technical Education, made this statement:

"Educated people must labor; otherwise, education itself would become a positive, intolerable evil. No country can sustain idleness of more than a small percentage of its people. The great majority must labor and labor in something productive."

Now, I think this statement Abe Lincoln made was up-to-date and to this day is up-to-date, telling it as it is; and I think it will still tell it as it is. If education is for labor, then what type of programs must we have? They must be based on the job requirements. I've drawn some triangles here to illustrate a point, I hope.

If this is a payroll job or a position, whether it be a doctor, a dentist, janitor, or whatever, there is a certain amount of training which must take place for this person to become employed at this point.

Now, we know a great deal of the training overlaps. If this was the medical profession, a nurse, doctor, lawyer, Indian Chief, down in the beginning the needs for one occupation are practically the same as another. As you move up the triangle, then it becomes specialized. But there are many commonalities in our educational program. The first grade probably is basic to most any profession, but too often our first grade will not point this out. Too often, we do not relate this from the beginning. They kid me about talking about vocational-technical education K through on. They always kid me about my vocational-technical kindergartens. But I really think that this has a point. I think there should be vocational kindergartens.

In the Vo-Tec News, the May issue, 1968, the Assistant Commissioner, Mr. Charlie M. Dunn, gave an article illustrating the trends in curriculum development and then he gave a presentation on this later, and I have stolen his transparencies and used them ever since. So my comments here will be basically from his article. If you have this Vo-Tec News, May, 1968, this entire article is there. But I'll try to give the highlights with the transparencies.

The first illustration shows the educational program as a time factor and a breadth factor, and this would be leading to an occupation. And so our educational system has these two years to eight years, I suppose, if you're going to be a medical doctor. But yet, when do you learn to teach or to be a counselor? It's when you begin the occupation, a great deal of it.

So a great deal of training takes place at this point. So this is our traditional plan that we use in curriculum levels and so forth. We would like to point out that from the sixth grade down we need books concerning the world of work. Sure, they read about the train with the smoke coming out; but is it reality? What should they be reading about?

There have been some experimental programs, one at Overton County, where the kindergarten children were given tools to build something. They built houses, etc. They didn't look much like houses, but at least they talked about them. But too many of the opportunities to give true experience to our youth have been lost in the early age. Where is the attitude that you're worried about really in counseling? Does it start at the first grade level? The attitude toward work, is this the beginning or is it before then? You keep hearing this: Well, what can we do with them after a certain age? It always goes back - it's the fault of the teacher before me. When you get to the mother, it's the father's side of the family that they inherited. Or if you get to the father, it's the mother. So it is never anyone's fault, but somewhere we have missed the opportunity. So we think at this point there should be a great deal of information about the world of work.

Somewhere beginning between the sixth and eighth grade levels, what about some exploratory possibilities? In the state of Kansas there was an experiment where the students went to the world of work. They went to the barber shop and found out what it was to be a barber. Just observed and then wrote a report. Whether good or bad, it was experimental. They visited other places.

Why does a person want to be an engineer? Because the money is good. But he may be a washout if we don't give him more information than this. Then it's the next we think they should be concerned with what we refer to as occupational families. Then somewhere along the 12th grade, the clusters of occupations and then higher in specialization.

Now, I first started my show with tinker toys and just as I'll not lose my image, I would like to use them to illustrate this point. This may be the world of work at the first grade level, and there are jobs in here and all sorts of things; and we may have to talk about them from K through sixth about the world of work and the many opportunities. But as he starts moving up the schedule, then we want him to think about a cluster, so we'll take some of this off and look at a cluster.

A cluster might be in the family of medicine or the family of agriculture, homemaking, merchandising - might be a large family in that you may have large families. For example, take the field of medicine. We have a cluster here that must require degrees--some of them eight years of higher learning--some of them two, three, and four. So let's break this down to a cluster that we deal with in the area school.

This might be a cluster of what we refer to in the area schools as service occupations in the field of medicine. If one of these jobs starts out with a nurse's aid, it might end as a practical nurse, dental assistant, dental technician, operating room technician. It might include the porter, janitorial work and so on. This would be

a cluster of service occupations. And as you move through this, the ideal way would be to study the information and let him select. This would be the cluster of programs. As he moves through here, he may decide that he can be a PM, LPN; this may be his goal, but it will relate to all the others. Our educational programs as we move through this should relate to the job that he selects.

This is a big, changing world, and to illustrate this point-- why do we need this? Well, my daddy was a farmer basically; he taught school some. But you didn't have to tell me what his job was; I could tell you. Now, I have a senior who's graduating from high school, and I have a junior, one in the eighth grade, and one in the second grade. Now year before last I spent thirteen weeks at Holiday Hills Resort in Crossville. Last week I was in Elizabethton. The week before, I was in Tri-Cities; the week before that I was in Knoxville, and I get to stay in the better motels. Now, check any of these four children and go home and tell them what my job is and how I earn a living. It sounds more like a vacation to them. Where are you going to be? And finally they get to where they never ask where I am, just when are you coming back. No idea really.

What are you supposed to do at home? Teacher or just what you do, mommy and daddy. We must get this information across about the world of work. It's so complex we cannot observe it. It looks like my tinkering toys. So through here we must give them some type of experience. The ideal way is for the student to start down here who knows he's going to be a medical doctor. We go through here and give him information about this and then he gets experience, and then he goes on. This would be the ideal way. A good program. It complements all the way. But he doesn't know. But the danger, in place of taking the idea away has been pointed out, he is going to leave us. And we still have over 30 percent leaving before the eighth grade according to Mr. Dunn's article. Drop out of school.

Now, traditionally, we have said that if he leaves school, this is bad. We would have helped him if he had stayed with us. I heard one doctor in an education field state that some people didn't have sense enough to be dropouts; they just endured any kind of educational program because someone told him it was good. So really, part of our dropouts are not the student; it is our fault. So if he drops out, we should let him enter back in at the same point. He should be able to come back to our educational program. But can he?

Mrs. Young, in my home county, they gave her the job of teaching to get a high school diploma. She went to the high school and taught sixth grade level. So every afternoon, she had to get all her books, go to the high school, teach that night, and bring them back. But it was highly successful. The next year, she said, "I'll teach it, but I'm not transporting all this junk over there and back and forth; they can come to my room or else." And it was a total failure. The forty-year old didn't want to sit in a sixth grade room. Now he may need to read "Mary Had a Little Lamb", but if it is a forty-year old man and if you're going to keep his interest, Mary better have something besides a little lamb. So we've got to have materials, interesting

and on the proper level. We've got to have the proper environment of each one of these for him to come back into our classroom. Where does the classroom stop? What is the learning situation? Do we really have to have a classroom? The Labor Department is looking at this total thing of training for employment, and Abraham Lincoln said that educated people must work and the Labor Department is not too interested in the classroom. If you get the opportunity, Eastman has an excellent set-up which they call Self-Teach Centers for employees to come in. So what are the trends in the development? We've got to look at a number of things. We think in our curriculum development that we are trying to develop what refer to as "prescription course outlines". If the student comes in at a certain level, let's start him at this level, and it sounds real good to talk about and we're making progress, but it's hard to change your instructors, and we're not getting all the progress that we desire, naturally.

Too many students are repeating the same materials--too many in your secondary programs, too many in your post-secondary, and even in elementary; you'll find a great deal of repeating of the many things that they have been exposed to.

I've covered curriculum and this and that and something else, so I can tell you all I know about most anything in a very short time. You're going to get the total works evidently. I would like to move from this to the subject of motivation at this point. When you visit a company, they say send me a person who's motivated. What is motivation and what do we in the school have to do with it or do about it?

Tennessee Eastman, in checking with their check list of their employees, has listed here about seven. The first one says "Application to Work" which is "stickability". The second one, the "Quality of Work"; the third one, "Speed of Work"; the fourth one, "How Does He Follow Instructions"; the fifth one, "Initiative"; the sixth one, "Conduct on the Job"; and the seventh one, "Relationship to Others".

We must start looking at the things at which other people look. One authority said that if you take a person and remove every trait or ability he has and leave him with being motivated, it will not take him long to develop back all the other things he needs. But if you leave him with all of his other abilities and take away his motivation, he has no will to think, no desire to live, no courage to develop, no purpose of action, and no action of purpose. So motivation is highly important, but in our traditional systems I will accuse the educators of doing (if I may use the word) the de-motivating.

A study was made of a group of employees: What do you want out of your job? The first thing listed was security, not money. It would be a job next year. Security comes about basically by success. However, our educational systems, the traditional type, is now built upon failure. You do this or you're going to fail--or you do this or you'll be sorry. These seldom accent the success; the threat is usually built around failure.

They said another thing that they wanted was interesting work. In our traditional programs, it's just so you're average. We don't look for ways to make or cause interest in our programs. But the second thing they, the employees, want is interesting work. But we say, just be average; average from the top to the bottom, or bottom to the top. But another expression, and I think average is good in a lot of things, but an example is - take a man and put one foot in ice water, one foot in boiling water, and on the average he's comfortable. So there's a lot of times average really doesn't exist and is not needed.

Another thing that the employees have pointed out is the speed that he moves. Our traditional program says, endure twelve years and we'll give you a diploma. Stick around. So really do we encourage him in our traditional programs?

A reason for being happy in work has been pointed out as job recognition or being recognized. In most of our traditional programs, you're a number; you move with the group. Too often in a large institution your instructor never knows your name. You get very little recognition. If you're real bad or real good, you'll get a lot of recognition. But these are the ones we give recognition.

The fifth thing that I'd like to point out here is initiative. Traditionally in our educational programs, initiative was not too important because they'll declare me a social something and promote me anyway. We have social promotion, and you don't have to have much initiative to move in this direction.

The sixth one I would like for you to consider is the lack of value of work. I think we are living in a society today which says, "I'm free; I'll do as I please." I think that with all the studies and everything that we have read, man is happy when he is serving and of service to someone. But our trend in America today is saying that man is happy when he owes no man anything. So pay all your debts; don't be obligated; don't do this.

I saw a little cartoon the other day. The first grade student was telling his friend, "School is all right if you can just keep from getting involved." And I think this is a trend today.

We should be involved as a service to our people. I think our educational programs have moved in a direction to de-motivate. To use an example over here, and I hope this will work; it's a new one.

...and by the time he travels through eight years, he's got his de-motivated cage on. You're not going to get to me. Not at all. And taking these six things that we have talked about, we'll let the first bar out here represent the lack of security. If we can give him security or give him some type of success, we can remove this. And so failure has de-motivated him. The second one, let's let him move and recognize him and not make him fight against the average of everything. Everything is built around the average. What about

enduring for so many years before you get anywhere. We ought to have an educational program in which the time factor is not the major factor. We ought to have some way that you don't have to be at the extreme top or the extreme bottom to be recognized as an individual. But some way we need to recognize each student that we have involved, and we need to find some way to do this. And we must find some way to promote him on his own ability and it is not necessary for him to say "I'm free and I don't owe anyone anything." And we must find some way to let him find a sense of value in the world of work, to be of service, to be doing something that is meaningful. How many activities in school are meaningful? But we must find these avenues to do this.

Now the bars that I have listed here, and I have some handouts here that you're welcome to take, I'd say are reasons why we, the educators, are at fault. The first that I'd like to touch on is when you present something new in the curriculum development or in teaching and the teacher will say, "Well, we've never done it that way." Haven't you heard that? So we've got to get rid of this excuse by your instructors or our school system. "We've never done it that way." This whole complex that you're in is something new. It's never been done that way before, and there will be some people against it for that reason.

Another one: You ask someone to try something new and they'll say "Gee, we're just not ready for that. You're moving too fast." So we must get this out of the minds of our staff. "We're just not ready for it. Don't give me that type stuff; we're not ready for it."

The other one is one I think we hear all the time. "We're doing all right without it; we're doing fine. What's wrong with you, trying to change everything. We've done all right; I'll stand on my record."

"I had three to start in college. How many quit? Oh, I don't know. But that's a good percentage; we're doing all right."

This one "tried it once; it just won't work". Tried it once. Another one is a good catch-all. Most anything you think about costs money. That's one reason all these things didn't cost a whole lot in my demonstration. "Why don't we do so and so? It just simply costs too much." Now this is at the administrator's level. And then if none of those work, we come up with this one: "It's just not my responsibility. Not in my job description; don't talk to me about that."

Now, if we can get our little man out (and I hope this part works well 'cause...) here's our little fellow. We've got him around to the point of not being motivated. What are we going to do to make him become motivated. You're going to have to try a number of things. What'll work for one person won't work for another. So no prescriptions in it. You know you've got to add a little

something. We'd like to get him motivated, but this one doesn't work. I certainly hope this one does. And so if we get the right one, we're going to light him up. These look the same, so this teacher can say I used the materials the same way, but you've got to get the right prescription. You've got to add to him what will make him interested; there's no magic formula to it. And you as counselors realize that this is something that must be done individually and a great deal of study and things must be done to do this. But traditionally, we have talked about our activities of grouping. It's real good; just give me a group of people all the same. Give me some that are gifted, nothing else. I want them all the same. I'm against grouping in one way, and in another way, I'm for it. And so I'd like to present to you my perfectly homogeneous grouping.

Now these are exactly the same; same ability and everything. We'll assume this. Now this is my little classroom and I'm going to work with them. So I pick this one out and work with him. Now the problem child gets in trouble and Mr. Average doesn't get anything. So I'll say I'll go the other way. I'll work with the problem child and the genius causes trouble. I'd like to have a roomful of these three. Nothing bugs them, good or bad. They're just there. They're nice to work with, no difficulties at all but then I try to work with this fellow, that nut causes trouble. And if I'm one of these do-good teachers who says that this student can make it without me, I'm going to work with this one. Well, these over here start whittling up the desk because they don't have anything to do. We cannot develop really at this point. Now, maybe we'll get to where we can test them all and have them all nice and neat in the same package, but I doubt seriously that we'll ever do this. I doubt that we'll ever come close to this type of grouping.

There are a great deal of things that can be done by grouping and by lecture, etc. Now the tradition is to get them in the room, to move them all alike. I have with me a little poem. If you haven't seen it, there'll be a copy. It's two pages; I'm not going to read it all.

"The Calf Path" - to paraphrase this, one day a calf ran off in the woods and the old farmer had to go and bring it back. After that, there came a hunter who followed the trail; after that, a wagon followed the trail; after that, a herd of sheep; after that, a wagon train, etc. And today the path of the calf is the main thoroughfare. Now are we guilty of this in our educational program? Are we following the path of the calf?

I think in curriculum development we must look at this and we must look at the individual needs of each student that we are permitted to have. I think that is the right word to say -- "permitted to have".

I'm moving to the next phase. I'd like to play the role of a teacher and I'd like to present to you my class. Give you a little case history of some of them. And to present to you this phase,

I'm going to use bottles for the students and the knowledge or skill that they have will be the water that's in them. So I'd like to present three (3) to you.

See this one? He's up to snuff. He's got the right amount; he's the good average student. Very good student.

Here's another one just like him. He's an average student, but he had trouble last year and has put the lid on. "We don't want no more ever what he's gettin'."

Now this little fellow has done pretty well but he'll never fit in the group. There's something slightly different about him; and we're going to handle him differently because he's not a group "fitter-inner". You can tell by looking at him. He's the wrong color, the wrong writing, and everything. He just doesn't fit in.

I'd like to present two (2) more. Now you can tell that these two are from the same family, same background and everything. This one is a good student; does all right. You can tell by looking at this that there's a little something wrong with him. Now, Mrs. Hoggriesle told me - she had him in class last year - she thinks that he's an unwanted child. In other words, he's an accident; and he got into my class by accident. If he stays in my class it will be purely by accident, because I'm going to get rid of him.

Now, here are two joys to have. Look how wide open they are. They're ready, willing and eager for anything. It doesn't matter what. Oh, if I only had a classroom full of these. Wouldn't it be wonderful?

Now, I want you to look at these two. They've got stuff in them and they've got lids on them. They're trouble makers. They were in Mrs. _____ - I better not use her name - class. Every year when I get students from that class I have to undo everything that poor woman does. If I could just get all this liquid out of them and get the right in. But it takes half the year to undo what she's done to them.

Mr. Sports, athlete. All he thinks about is sports. He's odd-shaped, all muscles, too big, doesn't fit in, and he'll give me trouble from the word go. And look, he doesn't even have the right color material. You can see it's all sports in the traditional color.

Now, here's one from the right side of the tracks. Oh, just a joy. But the trouble is that he thinks he's too good for us here. He's even got the wrong slightly colored material. He's got a top on, and when you take that off, it's even smaller.

Cute but dumb. It would be a joy to have her in class. She just sits around and makes the place cute. We will get along fine, but she's just about all she can take. But really cute; just a joy to work with and that's all. Cute but dumb.

He has got a physical handicap and we just don't talk about it. I don't want the rest of the class to know. There is not a thing in the world I can do for him. It is the administration's headache because they don't have a program for this type of person and we just let him sit here. My conscience doesn't bother me. It's the school's fault that he is not being helped.

Well, they are all about the same; came from the same background, but they come from a different school and I am not sure about the content. This one has the lid on. Not much is going to happen to him. I can't help him a great deal. Hope you can tell from this one exactly what is wrong. She talks. You can see its dental powders. All the time, talks all the time. You can't tell whether she has learned anything or not because it is all covered up with her gab and when she takes a test she just writes pages and pages and pages. So you never know.

Here are two lovers. You have got to watch them now. All they think about is boys and girls and you better keep your eye on them because if you turn around, you can't tell what's going on and we can't have anything like that. So you must watch these students. These two particularly. They've told me about those.

This is just an unlucky family. Just a poor child. You can see that everything about it is wrong. Wrong color and everything. Came from the -- well we don't even talk about her parents and the things that she does. We just don't talk about it. I hope that I can sit her by herself where she won't bother anybody else. Oh, I do hope that she doesn't come to school very much because she is just trouble all the way.

This one, oh, it's all right. We will get around to it later.

All of you have had this one; the medicine bottle. Evidently her uncle is a doctor. She can bring more excuses. She's always sick on the day of a test and never comes review day. She has a headache; she takes aspirin like they were going out of style and she is always a headache; she can just get her application and receipts and everything from anybody at anytime.

This one I would like to wait and introduce to you later. Now, after I have introduced the class, I would like to introduce to you the faculty or some types of faculty.

First of all, I would like to introduce the teacher who has all the degrees, all the training. Now, she may have never gone to college but one day but you would never know it to hear her talk. And she, or he, is well equipped - got a lot of information - loaded. About all they have got. She is going to say to the class, "Now class, pay attention. I am going to give it to you once; you get it." And so she just sprays them; just all at one time. Now, if they don't open up their lids and take it, that's just perfectly all right. I just can't keep wasting my material on you if you don't pay attention.

This dear teacher had teacher education courses and we will, I guess, call her "Trying or Dying". I don't know which. But she knows exactly how to do it. Someone has told her you can work with individuals and so she is going to. She is going to move around the room and work with individuals. She is just going to pour it on them. If it runs off, that's all right; if it gets in, that's all right. Now notice this little fellow a while ago. You notice, he has a handicap and he doesn't ever retain a thing. He takes it in but it just keeps going through. But that's all right, he got it. Now these are just real willing students here, but still you see it keeps coming out and by the time you get around to exam day, he doesn't know any more than he did the first day you had him. He has just got a slow leak. He is ready every day. This other joyful one, too, has a similar leak, similar trouble. But he is willing, cooperative. Oh, my! He would help you do anything.

These are the type of approaches that we have used. But you as counselors and all the others know that these two types will help some but you are going to have to take all the skill that you have. First of all, we have to find out, like getting you out of the box, how do you get his cap off. It may take a lot of tests. It may take a home visit. It may take - I don't know what, but we have to get the top off first. This one, it might even cause you to become interested in sports to get through to him and get him opened up. It might take a session with the coach. This one, where you will have to undo what other people have done. I can't get him open so we will have some failures. Here again, we want true success stories and not fictitious. Not like social promotion. But if you were to get the top off, you as a counselor may have to become the funnel to help that teacher - and especially in the case of the one that is so far above everybody. It is real needful but if that doesn't work too well, you will have to use the medicine dropper to get the material in here. But at least if we are putting some in, we are not wasting his time and we are not causing him to become lost in the educational world.

Oh, I forgot to mention one other type of student. Here he is. I had him in algebra one time and it was his third year to have it. He said that he was going to teach it next year because he had it longer than I. So, this is what he does. You turn your back and he helps with the class. That's all he is interested in - just to take over when you are gone.

I think these are the types of students and what we are trying to point out with the different shape bottles - some of them very close to the same, especially in the area schools. We have the advantages and the responsibilities to break traditions. We do not have as many formal things that we must do. We can let a student enter in at anytime, drop out at anytime. Therefore, we are trying to build prescription course outlines and each one of them leads to a payroll job. We hope he can study with us three months; he will be employable. If he can stay with us two years, he will be employable at a higher level. Now, this takes a great deal of change in

tradition and change of thought and approach. It also takes teamwork. We are constantly looking at this, but the teamwork approach takes a research development - finding things about our students, getting background information on them and being able to work with them as individuals. We have had the opportunity to have no more than 20 per instructor. I think it is coming in all types and all levels of education to work with the individual.

I would like to end by reading a paraphrasing of this story most of you have heard, "The Animal School".

Once upon a time the animals decided they must do something heroic to meet the problems of the changing world so they organized a school. They adopted the activity program and the curriculum consisted of running, climbing, swimming, flying; to make it easy to administrate all the animals had to take all subjects.

The duck was excellent in swimming. In fact, he was better than the teacher. But he made only passing grades in flying and was very poor in running. Since he was slow in running, he had to stay after school and drop out of swimming in order to practice running. This was kept up until the webs of his feet were worn and he was only average in swimming but average was accepted by the school and nobody worried about it, except the duck.

The rabbit started at the top of the class in running but had a nervous breakdown because of so much make-up work in swimming. The squirrel was excellent in climbing until he developed frustrations in the flying class because the teacher made him start at the ground up instead of the treetop down. He also developed a charley horse from over exertion and got a C in climbing and a D in running. The eagle was the problem child. He was disciplined severely. In the climbing class he beat everyone to the top of the tree but insisted on his own way to get up there and this provoked the teacher.

At the end of the year the abnormal eel could swim exceedingly well, run, fly, and climb a little and had the highest average and was the valedictorian. The prairie dog stayed out of school and fought the taxes levied because they would not add digging and burrowing to the curriculum. They apprenticed the children to the badgers and later joined the groundhogs and gophers and started a successful private school.

I thank you.

NOTE: See Appendix, Pages 155 - 161 for Handouts.

INTRODUCTION TO STUDENT SERVICES

Mr. Lee Rotenberry
 Supervisor of Student Services
 Area Vocational-Technical School
 Nashville, Tennessee

Thank you Mr. Phipps and members of the counseling profession. It is indeed our pleasure to be with you this afternoon and to give you an insight into the vocational training in the Nashville Area Vocational-Technical School. The reason we are concerned with your particular job and the responsibility we have is that over half of the high school graduates do not attend academic colleges.

According to a survey conducted by Dr. James B. Conant, former President of Harvard College and author of The Comprehensive High School--A Second Report to Interested Citizens, 55.9% of the graduates of the 1965 class of some 18,500 schools did not go to four-year academic or two-year academic schools. So 55.9% of our high school graduates were either involved in vocational training or NO training. Dr. Conant, in an earlier book, The Child, The Parent, and The State, makes a very definite statement to us in the counseling profession. "The Attendant in the Service Station, The Leader in Industry, The President of a Big Business have the same responsibility and privilege when they close the curtain in the polling booth, and they are taxpayers. They are the ones who help us to initiate the vocational educational system, to develop our way of life, and to identify the responsibilities that we have."

In 1963, the State of Tennessee inaugurated a vocational training program which included the Nashville Area Vocational-Technical School. I do not mean that we waited until 1963 to have a vocational training program, but it was in 1963 that the school in Nashville was incorporated in the state program. Our responsibility according to the State of Tennessee Vocational-Educational Board is that we are to train, we are to retrain, and we are to upgrade citizens of Tennessee in order for them to become productive taxpayers and laborers--workers in the labor market.

We have one of the greatest advantages in the State of Tennessee and in Middle Tennessee by our natural resources, our citizenry. And because of our citizenship and those that are involved it behooves us of the Nashville Area Vocational-Technical School to prepare our students, to enhance our faculty, and to inform our locale, as far as the industry is concerned, of the three-phase responsibility that we have in fulfilling the need for training, retraining, or upgrading of our citizens. So this is our responsibility and herein lies the vast job that we have to do. We cannot do this job alone. The responsibility lies within the association of the counselors of our high schools and our junior high schools in the recognition and the wanting to do those things which are best for the 44 percent of our student bodies who

are going to an academic educational system and to the 55.9 percent who will not go to our academic school.

Our responsibility starts as soon as we can first have contact with those who are interested in vocational training. We do not always get them until after they have had two years in some of our academic colleges. And then we get them and they know what they want. They come to us and we try to do what we can to help them. Our students are not necessarily high school graduates, and they are not necessarily high school dropouts because we have college dropouts. Some cannot afford college and some are not accepted in our academic system. We get those who are retired from some other program and who want to go ahead. Nashville has not been hit by the closing of industry as some of our larger cities and larger Northern cities have been. Therefore, we have not had the challenge in the absolute retraining of employees. But this could happen to us. If we do a good enough job in the other areas maybe we won't have to face and cross this bridge because we use preventive maintenance on our labor force before it happens. So in our area of work, we need your help; we need you to know what we are doing; we need to work together for the benefit of our future taxpayers in Middle Tennessee.

In order to qualify a person in the state of Tennessee, it is necessary for a student to be 17 years old. If he has not finished high school he must have been out of high school for at least one year and must complete an application. He must take the aptitude tests and must have a job objective. There must be a reason for him being in school primarily because there is no tuition at the Area Vocational-Technical School. This is furnished by the state of Tennessee and by the taxpayers who make our jobs available to our student body.

Now within our school in Nashville we have 22 courses available in the buildings across the way which you will visit on Thursday and Friday. Quickly let me give you a rundown on them: Auto Body, Auto Mechanics, Cosmetics, Child Development, Certified Laboratory Assistant, Drafting, Food Service, Industrial Electricity, Radio and Television, Refrigeration and Air Conditioning, Machine Shop, Tool and Die, Office Machine Repair, Bookkeeping, Secretarial and Clerical in Office Occupations, Unit Record Equipment which is IBM or Data Processing, Nursing Assistant, Welding, Basic Electricity, and Watch Making. Now I have listed these rather fast because those of you from high schools have been given a catalog this year. Mrs. Holshouser visited twenty of the high schools about two weeks ago and those of you who have not had a catalog, we have one for you now or you will get one before you leave before the end of the week.

We are very fortunate in Middle Tennessee and in Nashville because of the courses that we have to offer and because of the association of the two schools, the Area Vocational-Technical School and the Nashville State Technical Institute being side by side in this area. We have a vast program to offer in the various fields of

education. Those of us in Middle Tennessee and specifically in Davidson County have more to offer and to keep our population educated and available for education and the education available for them than nearly anywhere else in the South or in the North.

We ought to brag a little and now is my time to do a little bragging. Just recently a man who represents one of the biggest industries in Cleveland, Ohio, visited with us in our facilities. When we had finished visiting our various classrooms, he came back and he said, "You would be surprised if I told that Cleveland, Ohio, doesn't have anything like Nashville, Tennessee, has and you are to be commended." We feel quite proud, but we feel humble because we have it and we feel like that it is a responsibility to use it. All of us need to be informed of what we have, how it is available and how we can use it for the very best purpose for those who are our young men and women and those who need to be retrained in order to make a better working population in Middle Tennessee.

Now Mrs. Nancy Holshouser will go through the process of testing and preparing the student for entry into the school. She has her degree in Home Economics from David Lipscomb College and has done work at MTSU. She is our little peach from Alabama. We are proud of her and thankful we have her. Then Mr. Cliff Huddleston, a graduate of Harding College who has attended Boston University as well as Peabody College and whom many of you know, will take the program from the preparation of the waiting list, the orientation, and the student entering school. We will then have a question and answer session so during the program if you have a question please write it down and then when we get to the end we will take your questions and have time to fulfill that responsibility.

We appreciate so much your coming, for the opportunity that has been ours to participate in this program; and so at this particular time, may I present Mrs. Nancy Holshouser.

RESUME OF THE COMPLETE GENERAL APTITUDE TEST BATTERY

Mrs. Nancy Holshouser, Counselor
Nashville Area Vocational-Technical School
Nashville, Tennessee

The test that we give at the Nashville Area Vocational-Technical School is the General Aptitude Test Battery more commonly known as the GATB test. It was initiated by the Manpower Development Administration in Washington, D.C. several years ago as an occupational placement test. This test is a profile of a person's natural abilities and skills.

When the applicant comes into our office he is asked to fill out an application. At that time, we have a chance to talk to him to see what his training goals are and to schedule him for the GATB test. The test is given every Tuesday morning and twice a month on Thursday evening.

The two booklets you are receiving are Parts I and II of the written examination. Please do not write in any of these. I want you to glance at them so you will be familiar with the information we use for testing purposes. I would also like for you to take one sheet of the tablet which is being passed around. If possible, everyone needs Book I, Book II, a brown answer sheet, a sheet from the tablet, and a pencil.

Please turn to Book I and look at the first part of the test which is name comparison or clerical perception. You will notice that in this part of the test the applicant has to discern between likes and differences in names. The names have to be exactly the same. Contractions and misspellings are counted as a difference. You will notice on the brown answer sheet that there is a section labeled "Part I". It is divided into two columns. The answers are posted on the answer sheet. A six-minute period is allowed to complete as many name comparisons as possible.

You may turn to page 9 in the test booklet. This section consists of simple computations in addition, subtraction, multiplication, and division. The answers are given in an answer column. The applicant is asked to make his computations, find the correct answer in the column and then post the answer on the answer sheet by blackening the circle of the same letter that is beside the correct answer.

Please turn to section 3 which is on page 14. This section is involved in spatial perception. It determines a person's ability to see plane objects in three dimensional shapes. You will notice that to the left of each of these plane geometric shapes there are three-dimensional objects with a letter over each one. The applicant is allowed six minutes to make his decision and post his answer.

On page 25 is the vocabulary part of the examination. The applicant is asked to find two words which are most nearly the same or opposite in meaning. That particular part of the test takes approximately 45 minutes to administer. At the end of this time a five-minute break is given. Then we are ready to proceed to the second part of the test which is Book II.

On page 3 of the second booklet there is another perception test where the applicant has to discern between visual shapes and objects. Only five minutes is allowed for this section of the test. The second section of the math test is on page 11. These problems require a knowledge of general math. In the last section of the second part of the written test the applicant has to match like shapes and sizes. The applicant has to find a shape in the upper box and in the lower box and post the answer. It takes around 30 minutes to complete the last portion of the written test. Before we proceed to anything else, would anyone like to ask a question about any of these two booklets?

I would like for you to take the sheet that has the squares and prepare to take the motor coordination test. Please listen as I read the instructions to you. You will notice that in the upper half of the page there are four rows of squares. You will have ten seconds to finish as many of these as possible. I will use the word "READY" for you to get your pencil above the box and the word "GO" for you to actually begin. Put your pencils above the fourth box. READY! GO! STOP! How many completed two rows? Three rows? More than three rows? Now you are to move to the rows on the lower half of the page. You will have ten seconds to complete the second section of four rows. Get your pencils READY. GO! STOP! Did you complete more squares than you did last time? Turn your page over. You will have 60 seconds this time to complete as many squares as possible. READY! GO! STOP!

If you completed as many as 50 squares your conversion score is 62. That is not very good. If you completed 60 squares you have a conversion score of 82. That is much better. If you completed 70 squares you have a motor coordination skill of 101. That is very good. If you completed as many as 80, you have a motor coordination ability of 120. That is an excellent score. Is there anyone who completed more than 80 squares?

I appreciate your taking this part of the test. I think it will help you to see that this test is not geared for academic ability. It is geared strictly for occupational placement. There are two other parts of the test of which you need to be aware. I wish that all of you had a chance to take these tests because they are very interesting. The first one is referred to as the Finger Dexterity Test. I don't have a list of the occupational skills that require this and, unfortunately, I don't know all of them. But as an example, our classes in welding, radio and television, and watchmaking require agile finger movement. The object is to

move all of the pegs that are on the upper part of the board to the lower part of the board in a particular sequence. The test consists of removing one peg, removing a washer from the column, putting the two together and placing them on the lower part of the board. The applicant is allowed 90 seconds to complete as many of these as possible. The average raw score is around 25 or 30. Any one that completes more than 30 is doing extremely well.

The large board is referred to as the Manual Dexterity Board. This test is necessary for anyone who is required to do a great deal of work with the arms and the upper part of the body. The idea is to move all of the pegs that are in the upper part of the board to the lower part of the board. Three trials of 15 seconds each are allowed in this section of the test. A raw score of 90 would be considered average.

That is a very quick resume of the complete General Aptitude Test Battery. I apologize for having to move so rapidly through it. As I have said, this is not an intelligence test. This is an occupational placement test. There are deviants in the scores that you might be interested in knowing about. There is a six point deviant for the general score. The general score consists of one section of the math test, one section of the vocabulary test, and one section of the spatial test. There is a six point deviant for the vocabulary part of the test, a six point deviant in math, an eight point deviant in spatial, a nine point deviant in visual perception, a nine point deviant in clerical perception, a seven point deviant in motor coordination (which is the one you took), a twelve point deviant in Finger Dexterity and an eleven point deviant in Manual Dexterity.

Each occupation requires a different set of norms. These norms have been established by the Manpower Development Administration. After the student has completed the GATB test, his name then goes on our waiting list and remains there until we call him for entry into school.

Mr. Huddleston will now explain the orientation to the school.

STUDENT ORIENTATION

Mr. Cliff Huddleston, Counselor
Nashville Area Vocational-Technical School
Nashville, Tennessee

It is always nice to be back again with my fellow counselors that I have seen from time to time over the last six or seven years. We have been in many seminars together. People like Bob Vann, Bill Crawford, and others have been in seminars with me at the University of Tennessee in Knoxville, M.T.S.U., and other places. As I have been around to the high schools and visited with most of you I think that we have found a lot of things in common. Mrs. Phillips at Central High and I talk about my four years as a student at Central and how much it has changed. Since I moved back to Nashville in 1960, I haven't missed a single one of those Central High School reunions where we have usually had around 1200 people. I go out to Antioch to see Mrs. Marckam and I remind her that Antioch High was my first teaching job back in 1936. (I just aged myself, Mr. Sandlin.) I think we had ten teachers there and they paid me the enormous salary of "\$720 a year." They raised me \$5 for the next year and I said I didn't see any future in this work, so I quit. I went down and raised my right hand and was sworn into the Navy. I found out that the lowest seaman was making exactly the same thing that I was making but with fringe benefits.

Then I visit other people like Mrs. Williams out at Joelton, and find that we have a common interest in bike riding. Then I found out that Dr. Gilda Greenberg and her husband also have this common interest. I used to think I was the crazy one because when people see an old guy like me riding a bicycle they think he is a "nut."

When I go out to talk with the seniors of a high school or others, I usually try to convert them to vocational-technical education in three ways. First, I say that I recommend that you go to college if: 1) you have \$12,000 because that is what it costs the average person to go through four years of college in this country of ours. This has been furnished by government statistics out of Washington. Okay, you can go through on \$12,000. Some of you would say you can go through cheaper than that, but the average is \$12,000. I heard a father speaking of sending his son through Vanderbilt say "Boy I was lucky; I got my son through Vanderbilt for \$18,000." So you can see that the range goes way up and goes way down. 2) Then I say, if you are then willing to burn the midnight oil and in many cases study all night before the exams. I have seen my daughter do that. I say that if you go to a college and don't have to do that, you had better get out of that college because it is not much good. Any education that is worth anything means that you are going to have to really work for four long years. This begins to discourage some of these seniors a little bit--the \$12,000 and all this four years of work.

3) Then I say that you have done all of this, \$12,000 and four long years of sweating it out, and you go by and get that sheepskin in your hand and say you have got it made. Then you go out and get that job and here is where the blow really hits. You then find out that the average college graduate is making less than skilled workers. Now these figures are right out of Washington, D.C., also. Now I am not talking about the lawyers, doctors, dentists, or veterinarians, but I am talking about the "average" person like me and you, who received a B.A. degree or M.A. degree in Guidance and Counseling, in teaching, etc. Now we know this is true because one of our old teachers that I knew came by the other day. He is welding now. He had a stack of vouchers and I saw them. When he is welding, he is making on the average of \$520 a week. Now this is very unusual, but he is welding on a pipeline up in Indiana, getting a lot of overtime in a good union, but he is making \$520 a week.

Once we get them here into the school, the first thing we do when we get them in at 8:00 a.m. is to welcome them to the school then tell them that it is not like the school they have been in. We treat them like a worker. We are the foremen--we are the bosses. We have no change-of-class bells. We don't even have a bell system in our school. At one time though we found out that after students had their morning coffee in our snack bar they were wandering into their shop or classroom a few minutes late. So, Mr. Sandlin said, "This is going to have to stop." If we let them get by with it at the school, they are liable to try to get by with it in their jobs. We didn't want to spend a lot of money on a bell system so someone said, "Let's hook it up to the fire alarm buzzer." So we did that. At five minutes to eight the buzzer goes off to let them know that they have five minutes to finish their coffee or eat their donuts and to get into their classrooms or shops by 8:00. If they are thirty seconds late, they have to come by the office and get a tardy slip and that costs them a whole hour because we can't sit around working out the minutes and seconds. Six tardies like that costs them a day. Three days would cost them their place in the school. We terminate them after the third day because we have got to get them in this habit of attending school and attending it regularly.

We then tell them what the counselors can do for them. We are here to try to help them solve any of their problems; from baby-sitting to transportation, rides or changing courses. We don't say we will solve the problems; as you know, we can't do that. All we can do is sit and listen very sympathetically and then try to help them solve their problem. If you don't think that these adults have as many problems as the kids that you deal with, then you are sadly mistaken because they have children, they have families, and some of them are separated or divorced and they have all kinds of problems. We have foreign students. We have had them from Columbia, South America, Mexico, India, and Thailand. One girl from Argentina could not speak any English, but it so happened that our clerical and filing teacher spoke fluent Spanish and we put her in this teacher's class where she could communicate.

After we tell them what the counselors can do for them, we then get into a little bit of the history of vocational-technical education in the state of Tennessee. We tell them that we have 26 of these schools and that we have been here on White Bridge Road for about three and one-half years on the grounds of the old Veteran's Administration Hospital. Before that, we were at Hume-Fogg for several years camping on the facilities of Hume-Fogg at night. We now have 83 acres, plenty of room for expansion, and we will be expanding as soon as we can possibly get the appropriations. We have a long waiting list for some of our courses and cannot possibly handle all the applicants. Remember that we have sixteen colleges and universities in Nashville but only one Vocational-Technical School. Now this is where the demand is. The state handed me a big job last winter. They assigned me to do an occupational survey of industries in Nashville in collaboration with the University of Tennessee. I was assigned about 150 companies: AVCO, Ford Glass Plant, Baptist Sunday School Board, and on down to one man operations. I became very enlightened as I talked with some of these personnel directors in the big companies like AVCO which have four personnel directors. They said, "We have got college graduates running out of our ears and don't know what to do with them." Some said that they had personnel with degrees working at \$1.60 an hour. They said they needed specialists—people that are on the journeyman level. Actually, the hardest person to find is a person that is willing, ready, and able to work; to start at the bottom, that is loyal to his company, and loyal to his boss. That is a very hard person to find. If he has a proper attitude, he can be trained the way the company wants him trained. They said that they needed people with vocational training.

Now, I want these booklets passed out along with these cards. Our orientation is relatively short and relatively simple, but we are thinking about expanding it quite a bit. It is different at every one of our area vocational schools and nobody seems to have found the best method. We have deliberately tried to keep ours short, but we think we are going to add on some more features to it.

We tell these students when they come in that they are adults in a post-secondary school and then we go right into our orientation after we have completed our forms. This enrollment card is the first thing they fill out. We make two copies of it, one to send to the State Office and one for their instructors. Then we have them fill out two medical records. We get many people that have disabilities. We get people from Vocational Rehabilitation, from the Manpower Development and Training Office in the State, from the CEP Program—the WINN Program, as well as disabled veterans. About a third of our students are veterans so we have a great many things to do and say for veterans. We enter boys and girls right out of high school but don't get many except right at the end of the year and then we don't have enough openings. Those that are graduating now would have to come in as soon as the vacancies occur during the summer and during the fall.

We take the first hour in filling out the enrollment form, the medical history form, and the short form to signify that they have received the student handbook and that they will comply with the requirements therein. We then tell them that we need only one rule and that is to act as a lady or gentleman at all times. This covers everything.

Then we go right into the part of the school calendar which is on page 2 and is already out of date. We will have another one in the next few weeks. We tell them that our school is on a twelve month schedule. We are on a quarterly system like the colleges and universities with a break of a week or two weeks in the fall, two weeks at Christmas, and then nine weekends where we have a three day weekend. Then we tell them that the school is not closed according to the Metro School System during inclement weather. They should listen to their radio or television sets and if they don't hear anything, they had better come on to school. Of course, we make allowances for those that live out in the country. Some in other counties cannot possibly make it.

Then we go into our parking situation. Mr. Weld has been very kind to let us have the first one hundred spaces over here in the Nashville State Technical Institute parking lot. You see, our students are a lot richer than his. They all have jobs and we have many more automobiles over in our parking lot and cannot possibly park them all. So they have to filter over here where the poor academic students are. Our students, after school hours, are usually going into jobs like welding; or they go to the Ford Glass Plant to work, or many of the other companies around Nashville. Of course, I was kidding Mr. Weld. I imagine some of your students have quite good jobs also.

Now then, we tell them about the telephones and then we tell them about the eating situation. We get into a little bit about ecology and litter; about cleaning up after themselves in the snack bar, that we have a blind man who runs the snack bar who was specially trained in Arkansas to do this and that we don't run the snack bar--it is run by the State Department for the Blind. We tell them to clean up after themselves and they have been very cooperative. When you come over to visit the school on Thursday and Friday you will see that it is still almost as clean as the day we entered nearly three and a half years ago. Then, of course, the bookstore is operated over here at the Technical Institute for all our students. Mr. Wald has the cafeteria here in the Technical Institute but we operate it to train students in baking, cooking, food service management, restaurant management, and so forth.

Now we get into this business of appearance and I must admit that we have had some problems there. We got our necks into a noose not too long ago when we tried to enforce a rule against long hair. I know that you have not had this problem because you just let them go anyway they want in most cases. I have a seventeen-year-old who has long hair and it almost broke up my home because I tried to get

it cut. I almost threw him out but my wife intervened and said he would get over it. Well, I hope he does.

In the school our rule is that if you are required a certain mode of dress or appearance in your chosen profession you will dress accordingly in your shop. We tell drafting students, for example, that architectural offices usually require a shirt and a tie. Therefore, our students are required to wear these in our drafting department. Of course, we have some girls and this makes things a little bit different. Up until a few months ago we allowed no pantsuits in our school, but we noticed that the ladies in the local banks and department stores were wearing them so we now give written instructions during orientation to all the ladies on the type of pantsuits that we allow in the Vocational-Technical School.

The next item is attitude and conduct. We have never had any problem with these. We tell them that about two years ago we had two students back from Vietnam in our night radio and television classes. They got into an argument and one of them swung at the other and luckily he missed. Both students were suspended and lost their veteran's benefits. The business of safety is very important because we have some dangerous situations such as explosives, gases, and high speed machines. We tell them one of the easiest ways to get terminated is to be caught without wearing their safety glasses when he enters the course. They must have safety lectures, movies, and slides and then sign a paper that they fully understand the safety regulations.

Regarding course and program activities, we tell them that they can stay for the full length of a course and get a diploma. For part of a course, the student may be awarded a certificate if there is a Dictionary of Occupational Titles number that will fit their particular part of the course. For example, a welder would normally take a year to finish his course, but in six months he can become a "tack welder" which would entitle him to a certificate as a "Tack Welder." He could then go to work at the Nashville Bridge Company or at AVCO and work in the very simplest type of welding. If he wants all four types of welding and get a full-fledged diploma from the state of Tennessee, he must complete the full course. This applies also in the other courses.

Next, we get into the smoking problem. Those who are right out of high school are very happy to learn that they don't have to sneak out behind the gym anymore to smoke. I tell them that they can smoke in most places provided that the instructor will allow them to do so. Then we get into a lecture on the evils of smoking. We tell them about all the people that are dying with cancer, that two million people have emphysema, and that many people have coronary diseases and that foreign countries are far more worried than we are. These countries will not allow cigarettes to be sold to a teenager or let cigarettes be advertised. Then we tell them if they would save that 30c a day for one package of cigarettes invested at six percent interest that one of the country's

leading economists has found out they would have a little over \$33,000 at the age of 65 when they retire. Then I say go ahead and light up a cigarette because I have never convinced anybody yet that they should quit smoking. They usually think that the other person across the room is going to die with cancer or some of these other diseases as a result of smoking.

I think I am going beyond my time so I will sign off. Are there any questions now about anything? If you want one of our Area Vocational-Technical School catalogs, we have several p here and you can take one as soon as this part of the program is over.

STUDENT SERVICES

Paul Morrow, Director
Student Services
Nashville State Technical Institute
Nashville, Tennessee

Nashville State Technical Institute is a two-year college level institute for the preparation of business and engineering technicians. Our courses all carry credit, but transfer of credits is not the object. Our courses are designed to provide terminal training which will enable a student to obtain a good position after two years and be productive on the job within one month. The fact that they have college credit is a very good fringe benefit. Because we are college level, a student must have either a high school diploma or a GED to enroll. Other than that, there are no other admission requirements. We do require the ACT for guidance and placement purposes, and we have diagnostic instruments for use in placing students in our remedial programs. More will be said about these at a later time.

Nashville Tech provides numerous personnel services designed to make the educational experiences of our students profitable and satisfying. The faculty and administration recognize that the central purpose of the Institute is to provide an environment wherein each student may achieve optimum development -- intellectually, socially, and physically. The services, organizations, and activities are provided by the Institute as means of contributing to the total growth of the individual.

We realize that each student is an individual with his own attitudes, ideas and his own unique set of developmental tasks. Just plain old problems if you will, and no teacher, department head or administrator is ever too busy to help a student with any problem. Guidance testing and counseling services are provided through the office of Student Services to help assure maximum results from the student's opportunities here at Nashville Tech. After July 1, there will be three full-time counselors here at the Institute with training appropriate to meet almost any situation which might arise. All counselors are available to any student by appointment, but we try to get to know the students well enough that they will just drop in or stop us in the hall or anytime they might have a problem. I believe that you defeat your purpose if you require an appointment.

The Student Services office administers the financial aid programs here at Nashville Tech. We have four kinds of financial aid at this time. We have the college work-study program where a student works during the year here at school and earns enough to pay his expenses; an educational opportunity grant which gives a student a lump sum grant with no strings attached except that it must be matched 50-50 with some other kind of financial aid; work-scholarship grants which pay the maintenance fee for

the student; and federally insured loans through the Tennessee Educational Loan Corporation. This past year, about 15 percent of our full-time students received some kind of financial assistance through the Institute.

We have various social and professional extracurricular activities. Among them are student chapters of the various professional societies and interest clubs such as a Photography Club, an Astronomy Club, a Radio Club, and Audio-Recording Club, and many others. Also we are in the process of organizing some intramural sports activities. These things are basically to get the students interested in the school and school related activities. Because being a commuter school it is very difficult to generate any school spirit, and if a student is interested in his school he will do better in his academic work. Other social activities arise from time to time such as plays, dances, picnics, etc.

We do have a fine print shop here in the building, which you will see later, and as a result, we publish our own news magazine and yearbook. Students and faculty advisors prepare these two publications in their entirety except for binding the yearbook. These two activities and their product have done much to create interest among the students.

We have a Student Council and a House of Representatives. This past year was an organizational time and the Council was not as active as it might have been, but we expect some good things from it next year. Each class also has its own officers.

The Institute is VA approved, and this past year we have had as high as 40 percent of our student body receiving VA benefits.

I would like at this time to give you a few statistics about the past year and the students we have had. Enrollment was as follows: Fall - 398 (this is total day and evening students); Winter - 393; and Spring - 333. We have had 58 dropouts by actual count from a total enrollment for the year of a little over 500 or about 10 percent dropout. At the end of winter quarter we suspended 50 students for failure to maintain a two-point average and another 10 percent for academic reasons. This makes a total of about 20 percent who have left school.

On the other hand, we have had about 30 percent of the student body on either the Director's List or the Dean's List each of the three quarters.

Of the total enrollment for the year, less than 10 percent were female, and this caused a little morale problem for so many male students. We hope this improves for next year.

Of the total enrollment, about one-third are married. The mean age is about 24. About two-thirds are entering higher education for the first time. Black students make up about 16 percent of the enroll-

ment which is a little less than we expected, frankly. About 85 percent of our students come from Davidson County. About one-half of our students are studying data processing and about another one-fourth are in electronics with the remainder spread among chemical, mechanical and industrial engineering technologies. About one-fourth of our students this past year submitted ACT scores. Next fall all students will be required to take the ACT before admission. The mean composite score for last year's students was 18 which seems to be an appropriate score for a student who expects to do well.

For students who are not so well prepared, we offer an extensive program of remedial instruction in math, English, physics and reading. You will hear more from these later in the week.

Besides what I have already mentioned, Student Services has the responsibility for graduate placement and student recruiting which is how I have met many of you already. Next year we will graduate our first class of, I hope, 60 or so, and there could be no greater asset to this school than to have those people appropriately placed and doing good work for their employers. So, naturally a great deal of time will be spent on this function next year.

So far as counseling goes, the primary problem we have faced this year is academic deficiency. Many students did not realize how difficult our program would be, especially the math. Math is a major element of all our programs and without a good background in math, passing the major subject is very difficult if not impossible. Consequently, academic problems have been uppermost.

We have had very little in the way of vocational guidance or disciplinary problems. Basically, the students who enroll at Nashville Tech know what they want to study and why they are here. That one fact eliminates a host of problems. So far as drugs are concerned, we have had only one incident in which actual materials were found. I know of several students who are taking some type of drug, but unless they cause some type of disturbance or come and ask for help, there is really little that can be done. But, I repeat, we really have had no problems with the students. This is a little surprising; at least I didn't expect it.

I know I haven't used up my hour, and I have probably omitted some things you would like to know. So if you have questions, we will try to answer them.

INTRODUCTORY REMARKS

Guy E. Phipps, Registrar
Nashville State Technical Institute
Nashville, Tennessee

One thing that was discussed in the meeting when Mrs. Pease, Dr. Greenberg, Mr. Sandlin, Mr. Morrow, and I met was follow-up methodology. We hear more and more about accountability. I have been in the educational system for over twenty years and most of this was spent in the high school, some in college, and some with the State Department. We have never really been held accountable. I am referring to how many dollars went to training and getting students ready to go out in life to start earning a living to put dollars back into the economy. We just have not been held accountable, and it is going to be hard to do it, especially in education; but the public is going to demand it more and more.

Vocational-technical education has been hit faster on this than anyone else because it is probably easier to measure, but in the next few years all of us will hear more about accountability. How much money did we spend to get these students out? How much money is this student putting back into the economy? Follow-up methodology needs discussing, and we thought it would be good to listen to a man from the State Department of Education and Area Vocational-Technical Education and hear him talk about how we in vocational-technical education are doing follow-up so we can be accountable for what some of our students are doing. We have with us Mr. Jim Judd, Supervisor, Area Vocational-Technical School, Division of Vocational-Technical Education.

FOLLOW-UP METHODS AND PROCEDURES

Jim Judd
 Supervisor, Area Vocational-Technical Schools
 Division of Vocational-Technical Education
 Nashville, Tennessee

A little boy and girl were playing a game, and they decided that they wanted to play hide-and-seek. The little girl said first, "I'm hiding." The little boy said, "I'm trying to find you." The little girl said, "I'm still hiding." The little boy said, "I'm going to find you to kiss you." The little girl said, "I'm hiding." She thought a minute and said, "In the closet."

I am taking Paul Robertson's place today. Paul is in charge of our records and record keeping. I'll show you a picture of Paul later in the program. First of all, all about your counselors. Thank you for allowing me to be with you. I realize the tremendous jobs the counselors have, the lack of pay, and the time spent in making full use of human potentials. We are full of praise for all of you, for all you do when nobody is looking. We are full of praise for you for what you are.

If I could give you medals, I would give you medals for the nice deeds you have done that nobody noticed; medals for the times you cared when nobody else did; medals for the times you helped and no one knew.

For you ribbons, ribbons for trying new ways and discovering new ways to help people.

Prizes for you, prizes for listening and not talking, for seeing good things in a person that others might miss; prizes for helping those who need you when others go the other way.

Roses for you. Roses for making others happy for helping them with their troubles, for caring when nobody is looking.

Anytime I can talk about some of the things we are doing in the area school system and exchange ideas with those that are interested in training people for the world of work, then I always go back to my office with an attitude that makes my job more meaningful.

Before I go into the follow-up system, if I may, Guy, pass these out (Pass-outs of Area Vocational-Technical Schools Catalog). These are catalogs of our Area Vocational-Technical System. There are thirty (30) of them.

I will have to do a little background work before getting into the follow-up. Last year, 1969-70, we served 20,000 people. Six thousand and five hundred post-secondary trainees attended our schools (27 schools).

We served about 10,000 in supplementary programs. These are programs for people who are already on the job; persons come into our schools for updating and are given short-term courses to either help them in their jobs, or to give them a higher job placement with more pay. In our part-time preparatory programs, we served about 3,200 people. We had about 300 secondary students in Oneida, Ripley, Hohenwald, Dickson, and Crossville.

If you look in terms of follow-up at persons exited from school, we have to eliminate part-time and supplementary programs because of lack of funds. In 1971-72, we predict that we will serve some 27,000 people in our 27 schools.

I am pinch hitting for Paul Robertson, who is on vacation. He is not able to be here. He is in Florida in the gritty old sand and in the terribly hot sun. In his absence, I was able to secure a picture of him. I want to let you know what he looks like so that you'll recognize him when you see him (Picture of a fierce bulldog). You will notice he has sharp teeth, beady eyes, and a big head and told me "good luck". That is him. We work in the same office. We are squeezed together up there. If you want to know anything about records, he is "Mr. Paul Computer".

Our program is designed to meet a person's needs. To explain some of these needs, each Area Vocational-Technical School is a training center designed to serve both youth and adults from broad geographic areas. A person's desire to prepare themselves for employment in trades, technical and other occupations will find the area schools a program of instruction specifically designed to meet their needs. The area schools enroll both those who have left high school and those who have left the full-time school program. The area school counselor keeps in close touch with those who need advice with regard to their vocational objectives, progress in their class, and such outside social and emotional problems which might effect their progress toward their goal.

For those who stay in school for a short period of time, a letter might be obtained from the school superintendent showing the amount of quality of work done. For those who complete a given unit in a course, a certificate of work is issued upon request. The diploma should be the goal of most of those who enroll in school. The diploma is only issued upon completion of one year or more work. In some courses, two years of work is required, but credit may be given for previous work provided confidence in that work is shown by that trainee. All schools maintain close communication with the employers, both in the local community and statewide. The result is that those students who stay in school until they complete their courses are reasonably sure of the employment.

If you have a question while I'm talking, go ahead and break in and I will try to answer them. "It has been more than a hundred years since 1940." A lot has happened, and we hope that we are a part of that. Our programs are designed to prepare a person for employment;

to upgrade the skills and knowledge of persons who have already entered the labor force, and we hope that this is with the change of times.

In certain ways, all persons are alike. When they are born, they are dependent upon others, and have one heart and two kidneys. Some are alike in terms of sex, the kind of language patterns they acquire, the development is unique in terms of his genetic pattern, the kinds of past experiences he has had, the way he sees himself in terms of his personal aspiration and what he wants to become.

Our schools, we hope, have helped a person see his personal aspiration, to become what he wants to become. We can only determine to some extent these answers through follow-up of an individual after he has left to the world of work.

This leads into some of the things we are going to do in follow-up in the area schools. Look at these pass-outs that I have. We will have to do follow-up for a period of five years. Maybe within five years we can determine whether we have helped the person to become what he wants to become.

Most of you have seen the Student Information Card. You have a section that states Area Vocational-Technical Student Information. Every student that enrolls in one of our 27 Area Vocational-Technical Schools fills out this side of the card; they will not fill out the other side. This information is then sent back to the state office, and the school may duplicate to keep copies for themselves. The information is placed in a computer. If I may, I will give you a sheet of this (Pass-outs of computer printout). This computer printout gives us our first information. It is held on each student. As a student completes a particular program of study, this is sent to the state office to Mr. Paul Robertson. This change of status indicates, if you will notice, whether the trainee is a non-completion or a completion. It has various indicators. It also gives a mailing address for this student. The printout gives the name of the student, social security number, status, number of hours trained, non-completion for poor attendance, lack of progress, military, illness relocated, financial, disciplinary and other. In completion, you will notice students DOT Code. Now this gets into the need for a little bit of explanation (Dictionary of Occupational Titles). Our Area Vocational-Technical School System is set up to offer students various jobs. We communicate with Manpower, Employment Security, Department of Labor, and Health Education and Welfare through the Dictionary of Occupational Titles. In your catalog, (Area Vocational-Technical Catalog) you will find on pages 21, 22, and 23 some of the schools and programs offered to trainees. We have not included in the catalogs the DOT Code number. After we get the change of status form (Computer printout) on a student and after it has been determined that a specific program has been completed, we at the state office will put the DOT Code on it.

The first year we used a machine preparation follow-up, and I will pass these out. Take one about every other person. You'll find that this is a follow-up used for mailing to the students. These were sent to the instructors at the school, to be signed by that instructor of the student, then to be mailed to the student. You will notice that there is a section at the top that is empty. The original sheet sent to the student says:

Dear Debra:

We at the State Area Vocational-Technical School now need your help. We are trying to measure the value of training programs to the success of our students. Debra, a couple minutes of your time will be of much value to us. Please check the requested information below and return this letter as soon as possible. Your responses will be held confidential and will only be used to evaluate and to improve our programs. Thank you for helping us.

The instructor signs it. An ex-trainee getting this from the instructor, we hoped, would be better than the State sending one out from Ben Hirst, Charlie Dunn, or Commissioner Stimbert. You can see some of the things that we are asking for. First of all, we were asking for information concerning employment status. It has a place for name of the employer, the city, state, and the job title. It had a place to check the hourly rate as approximately \$1.60 or less all the way up to \$3.00 or more. My employment is full-time, part-time, my work is related, not related. Then, after the employment and salary range is given we wanted to know how this person rated the school. Please rate as: above average, average, below average. How did the ex-trainee evaluate the instructor: instructor's knowledge, instructor's ability, ability to obtain job help.

Now, this follow-up was not good enough, we felt that some change had to be made. Does anybody want to know how much response we received? We received 30 to 35 percent response from the 6,200 that left school in post-secondary education. The instructors helped us when we didn't have the proper information. We would give them the letters, and the instructors would address them and send them out. The response was not what we wanted. We would like 100 percent response. We have to go to something else. This is not completed. It is tentative. We hope that this next follow-up will do the job (Pass-out "Happy Birthday" follow-up).

HAPPY BIRTHDAY

You entered our school to learn a trade;
You obtained the skills and had it made.

You've been out now, for a little while;
And we'd like to know if now you smile.

As a result of the training you did receive;
Is your pay check bigger, as we like to believe?

Please complete and return this form, Okay?
And may you have a HAPPY BIRTHDAY!

Do you think this would get your attention! Open it up. We have asked the trainee to give employment status; full-time or part-time. Last October we contacted them with the first follow-up, so now we are asking them what has happened since October 1970. Not whether or not he changed employer or job title. The new follow-up has a place for the new job title. Payroll job title. Okay, they know what their payroll job title is at that particular industry; we would like to compare it with one that we trained them in at our school. Other information found on the form: After employed I received a pay raise within one month, six months, twelve months, over twelve months. It gives you a place per hour, per week, per year. I feel the training received at your school has been helpful. We are also wanting the ex-trainee to evaluate our school, how they felt about it; is he currently receiving or have had additional training. We have supplementary courses. The ex-trainee can go back to school, to colleges or universities, or come back into this supplementary program of ours to upgrade themselves. We also want to know if they might get on a higher pay scale or upgraded on their job by taking supplementary courses.

Other information may give a place for the employer's name, city, state and zip. Is the person currently seeking employment. If they say, no, why. Okay, but if they say yes, then something is wrong. We have failed somewhere; either that, or they are just not anxious to get a job. Lack of jobs might be a reason. That would have to be looked into. I feel that the training received in your school was helpful in my past employment, yes ___ no _____. I'm currently continuing my education. All these questions are interesting to us. Comments.

NOTE: See Appendix, Pages 162 - 165 for Handouts.

INTRODUCTION OF EDWARD H. KRIEL

Edward L. Weld, Director
Nashville State Technical Institute
Nashville, Tennessee

Edward H. Kriel is Director of Industrial Relations for Aladdin Industries, Inc., one of the largest industrial employers in Nashville. For the past twenty-five years, Ed Kriel has been with Aladdin Industries in managerial positions concerned with personnel and industrial relations.

Mr. Kriel did academic work at Northwestern University, Chicago, Illinois. He was a Captain in the U. S. Army during World War II.

Mr. Kriel's interest in vocational and technical education are indicated by his membership on the following committees:

Metro Public Schools Machine Shop Advisory Committee
Industrial Arts Education Committee
Nashville State Technical Institute Advisory Committee

In addition to these committees, Mr. Kriel has been an active member in a number of organizations and on a number of committees, including the Advisory Committee of the Master of Business Administration at the University of Tennessee, Nashville.

ALADDIN INDUSTRIES, INC.

E. H. Kriel
 Director of Industrial Relations
 Nashville, Tennessee

That was quite an introduction. I am sure that if my wife heard it she would wonder why I cannot handle a hammer any better than I do. I know it is a little bit early to tell stories; but I heard one a short time ago, and I think it is related somewhat to the communications field. Since we are involved in the type of program that uses communications effectively, I thought I might tell you this. It seems that there was a man in Chicago who owned (like I said it is a little bit early to tell this type of story) a cocktail lounge. Some of his customers were primarily people who could neither speak nor hear, and this was a very regular group of customers that gathered every evening. One night a friend of his visited him and was looking around the lounge and complimenting him on what a fine looking place it was, and he was so interested that the owner said, "Look, I have to go out for a couple of hours so why don't you take over for me." The friend said, "I could not do it; I do not know how to communicate with these people." The owner said, "They just order two drinks--when they hold their right thumb up they want beer and when they hold their left thumb down they want champagne." "Really," he said, "I do not think I could do it." The owner said, "Come on, do me a favor, I have to go out so how about helping me out." He said, "Alright, I will." "Remember now," the owner said, "beer--champagne." So the owner left. The fellow was taking care of his business for him, and the customers were getting along famously having a good time, drinking their beer and champagne, and they were just having a real good time. After a little while, after everyone had been served a few drinks and was feeling pretty good, one fellow in the back of the room waved his hand like this, and the man that was taking over said, "Wonder what that means?" The man that was taking over waved back to him. Then he saw someone else in the other corner doing this and before long the whole group was waving their hands like this. So he thought they were just having a good time and having fun. Before long the owner came back and saw these people waving their hands and he said, "My gosh, what have you done?" The fellow said, "Only what you told me, served them beer and champagne." The owner said, "Yes, but you have got the whole bunch singing and they will never go home." This goes to show you the problem you can have with communicating.

Since you are going to be touring our plant Thursday afternoon, I thought I would brief you a little bit and give you some history of Aladdin. Some of you may know about it; but for those of you who do not, I would like to tell you a little bit about our company and some of the things we are doing that may be of interest to you. Aladdin was formerly a Chicago firm and started in business in 1908 in Chicago, Illinois. Kerosene lamps--I am sure none of you are old enough to remember how kerosene lamps were used--I do. We were primarily a mail-order type of business. We did not do much manufacturing at the time. We purchased parts and did a little assembly work in Chicago and shipped these things out to small towns, primarily hardware stores and general

stores. The business continued at this rate for some years and about 1927 we purchased a glass plant in Alexandria, Indiana, in the central part of the state. The reason we purchased this plant was because they had been supplying us with glass chimneys for kerosene lamps, and they went into receivership. Mr. Johnson, who was the owner of the company, decided to buy the plant in Alexandria. So we moved our manufacturing operation to Indiana, and at that point we really started to become manufacturers. We not only made glass chimneys for our lamps but we made other parts for kerosene lamps and a few other things. This went on for a few more years, and we got interested in vacuum bottles. At that time, American Thermos controlled some 80% of the market. We were just beginning, but we worked at it hard and in a few years we made a pretty creditable bottle. But, of course, we had to stop manufacturing bottles for a while during World War II; however, we continued to make our kerosene lamps. At the end of World War II, of course, we got back into the bottle business again. By 1949 we had reached the point where our bottle business had grown. We had to look for another location not because we were having problems where we were, but the nature of our business had changed; we had difficulty in distribution, our sources of supply were difficult, there was a shortage of labor, and there was a transportation problem--this was a very small town. So we looked around for a place to locate and after looking at many cities around the United States, we chose Nashville and lucky for us. In 1949 we opened our first operation here. During the next two years we moved the balance of our manufacturing in the United States to Nashville. We had an electronics division in Chicago which we moved down here in 1951. In 1952 we moved the balance of our operation from Indiana to Nashville, so we have been here now about 21 years. When we came to Nashville in 1949, we employed about 200 people, and we had about 8 acres of ground and about 125,000 or 150,000 feet of floor space. Today we have over 1,200 people. We have about 25 acres of ground, and we have about 650,000 feet of floor space, and we are in the process right now of putting up a new building about 80,000 square feet. Thursday when you are out we will try to get a bird's eye view of this.

We are the leader in the thermos bottle business today. We came from a little manufacturer to a good sized one. We make a great variety of bottles and lunch kits. I am sure many of you have seen them. I hope all of you use Aladdin bottles and lunch boxes for your children.

Our electronics operation is rather unique. We are in the components business, and our customers are people like IBM, General Electric and National Cash Register. We make components; we probably have some of our components on the moon, and we are sure that all successful flights were ones that had our components in them. We make a variety of transformers, inductors, filters, and things like this. We will show you what some of these look like when you go through Thursday. They are tiny, micro-miniature type components that are used in electronic equipment.

A much newer part of our business today is what we call Temp-Rite System. If they were not so large, I would have brought some with me here to show to you. This is what most people refer to as a tray. It is a vacuum tray insulated with polyurethane in a special plastic shell

sealed and has little compartments in it in which food is placed in little plastic inserts that are disposable. These trays can keep food hot or cold for three hours. These are primarily being used in hospitals but the airlines are also using them. If you fly Piedmont or Allegheny, you are very likely to use one of our trays. The trays themselves are not disposable, but the inserts are--these, of course, are something like bags you can dispose of. The trays can be put into a dishwasher and used over and over again. The life of these are probably about a year; although we do not know exactly. We are fairly new in this business, and we have not had a chance yet to gather enough data to be sure. The principle of the thing is that it is a stacking process--you stack one tray on top of another and they lock in position. There is a control for heat or cold. If you take one compartment and put a steak in at a temperature--let's say of 180 degrees, three hours later it would be 140 degrees. If you are familiar with cooking steaks--I know you are--you know that 140 degrees is pretty hot. Right next to that is another compartment in which you could put ice cream. Put it in the tray in a frozen state, and three hours later it will be just at the right temperature for you. In each compartment of the tray this control exists and this is the principle of the whole thing. There is no transfer of the heat from compartment to compartment in the same tray. They are usually stacked in 10's. They can be strapped up and carried or wheeled around on a cart. When you are finished with them, they can be put back in stacking position and away they go. The advantage of these at a place like a hospital is that when everybody has a different menu they can prepare these things without having a definite timetable for preparation. They could start at nine in the morning, preparing these trays and stack them up and put them off to one side. At eleven or twelve, whichever is eating time, they merely take them apart and start serving the patients. It has a great market. We recently made some arrangements in Germany to use them in hospitals there. We have a contract with people like Holiday Inn and Ramada Inn. A lot of the catering people are using these trays. This, as I say, is the newest part of our business.

This is a little sidelight--talking about something that we got involved in recently. You probably read about our interest in the Metro Center, an area in North Nashville along the Cumberland River where there is about 800 acres. One of our subsidiary companies, Pathfinders Resources, Inc. formed a partnership with a building contractor here in town to promote this area up there which will be a research center, park center, industrial, educational, and residential center. It has a great potential and we are happy that we are a part of it.

To give you an idea of what our work force looks like at Aladdin, the last report I had we had 1,216 people, and it was divided in this way; there were 752 females and 464 males. In spite of what people say, I think females are dominating our plant. In our management group, we have 221 people. We have what we call our technical and office group, and these are the people we will be talking about some this morning and you will get a chance to see Thursday. We have 162 people of this kind,

and this is split in this way; 104 females and 58 males. Here again, this 162 breaks down into 74 people who are technical people and 88 people that are considered clerical with various degrees of skills. The technical people are involved in jobs such as technicians, inventory control people, tool engineers, junior designing engineers, model builders, data processing technicians, and for some strange reason it also included executive secretaries. The clerical group would, of course, be clerks, keypunch operators, stenographers, some category of secretary, and a wide range of general type clerks. What we call our wage group, people who work out in the plant, we have a total of 833 in all three divisions; there are 355 females and 475 males. This group—I am going to divide them into what we call Consumer Products and Electronics because there is a different end product here. In our Consumer Products Division we use people like tool and die makers, machine builders and erectors, machinists, equipment technicians, maintenance technicians, utility men, group leaders, and setup men. Our Electronics group has a different category called ceramic technicians, complex mold and tool makers, inspection technicians, mechanics, and some electricians. Now this is a broad category of the types of people that we employ there. Some of these probably mean something to you. You probably have heard these or perhaps seen people like this before in this kind of work. Many of them are peculiar to our type of business. You will find in most businesses whether it is ours, DuPont, Ford, or AVCO the nature of their business pretty well dictates some of the skills they are going to have. We, for example, do a lot of work with glass. In our bottle business, we do not make glass but we fabricate glass; you will see this Thursday. We take two pieces of glass that we purchase and form them into what looks like a jar and we weld the open ends together and fill them with silver nitrate and exhaust the air from between the layers of glass. We finally seal them up and have what we call a glass filler. Now this is a process in itself and I doubt if you will find two or three companies in all the United States that will do what we are doing with glass. So we have developed the skills and techniques and equipment to make this glass for use and this came about over many, many years. Our chief competitor is American Thermos. Since they were the leaders once and we are now, we need to hold our position. We also have a good many processes involving plastics and the jackets for our glass filler, the part which you see when you go into the store. This is what we call an injection type of plastic molding—to give you an idea of the cost involved in some of these things, the mold to make a plastic part could cost as much as \$25,000. This would look like a lot of metal put together—it would have a cavity unit which the plastic goes into in the shape of a cup or stopper or glass jacket.

We also make lunch boxes out of plastics as well as metal. We decorate these things with a very clever type of printing process that we developed ourselves. It took us some two or three years to develop the idea which originated in, I think, Germany. We brought it to the United States and were the first ones to decorate on plastics for thermos bottles. By decorating I mean—you have probably seen some of our lunch boxes and bottles for school kits with characters on them. Well, on the metal jackets, this is lithographing and this is a printing process—very expensive. We used this for many, many years and almost exclusively now

we are making jackets out of plastics and are duplicating what used to be done on metal on plastics. The artwork that you see is little characters, you know Disney characters and Gunsmoke—all of these people that we watch on TV or see in comic strips. These characters have been put on these jackets. We also make a bottle that is all metal and does not have any glass in it. These are called Stanley bottles. We purchased this business from a company about six years ago up in New England. The company was having a great deal of trouble in their manufacturing and marketing. It was the old Universal Company who made percolators, toasters, and things like that. We purchased the Stanley bottle business from them. This is an all metal bottle that had an outside shell made of cold, rolled steel and the interior was made of stainless steel; and it is welded together. The air is exhausted from between the two metal cylinders and then is sealed, polished, painted, and is a very attractive model. It is called the Rolls Royce of the bottle business. They cost about five times what a bottle with a glass filler would cost. It has a five-year guarantee, and they are virtually indestructible. You can almost run over them with a truck, and you might dent it; and it might not look too good, but it still works. Any of those bottles that are sent back to use with a problem we feel is our responsibility, we replace free of charge. To just get an idea of the difference in retail cost, a quart Stanley bottle would retail for about \$17 or \$18. A quart glass bottle would retail for about \$3. That is about five times as much. They are very attractive bottles. They are heavier, of course; and like I said, they have a five-year guarantee. People like truck drivers, hunters, and fishermen who are in need of something durable prefer these types of bottles. They make excellent gift items because unless a person really needs something like this he would not spend \$17 or \$18 for a bottle.

In our Temp-Rite server business, products which are made almost entirely of plastic, the processes there are what we call vacuum forming. We form trays and inserts at a very high speed, almost completely automated type of operation and because we are still in a state with this where we are not letting any competition know about what we are doing, you won't be able to see this operation Thursday. We will show you a lot of the trays and give you a good insight as to what they are made of and how they are used and so on.

Back to our electronics business for just a minute—as I say, this component business is mostly a micro-miniature type of component. I am not an engineer and cannot talk to you in engineering terms, but I mentioned the kind of equipment they are used in and we do use such things as coil winding, wiring, assembly, punch press work, etc. We even make a powdered iron core that we call a ferrite core. This is the core of a transformer or an inductor and is a very basic part of a component. We use lots of girls in the assembly unit, inspection, and for machine operators.

We employ technicians in this type of work. I am telling you this to give you a background for what I think you can do and we can do to improve and develop the kinds of technicians and craftsmen we need in Nashville. We attempt to do much of our own training. Because for many years we did not have adequate training facilities in the Nashville

area to provide the types of technicians and craftsmen that we needed. I think the fact that so much more industry has moved into this area—with a demand for people like this, people who just come out of high school and are looking for a skill of some kind to use or people who did not finish high school. We provide some training, but, of course, we have limited facilities; and we would much prefer to have you provide us with the people that are trained or at least given the basic training so that we can go on and develop technicians. There are many jobs where people have to develop skills with their hands and skills of their mind. Jobs—that require a lot of mathematics, ability to draw, people that have imaginations, people who are interested in seeing things that they can develop.

Our glass machinery and glass operation is as unique as you will find anywhere in the United States. Our automated process—we have developed almost all of it ourselves. We started from the drawing board with an idea that had been put down on paper roughly and someone else got it and blew it up, as we say, and divided it into segments of pieces of equipment or a line or process and people started to build it. We started out many years ago building equipment like this and doing it just for experimental purposes. We did it to see what actually could be done. We proved to ourselves that we could develop and produce a bottle that would be the best in the business and we accomplished this.

From that point to where we are right now, it took the help of a lot of people; and here again, a lot of the technicians that we used in doing this were the people who built the machines and put them together. We went through many trials, kept records of what went on as the process was being developed. In the glass industry, scrap is a word that could almost put you to bed because it can build up on you and you can have glass all over the floor from a machine that is not operating properly. It is very fragile and if dropped on the floor is broken and you cannot use the glass over again. All of these things we have done—that have been accomplished—with someone offering an idea to begin with and all of the technicians throughout the organization helping to put it together and finally making a process that works, controls, and keeps your business in a profitable state where it should be.

Something that I forgot to mention—we do have a computer. We have a 360-30 that does quite a bit of work for us. We are using it more and more in the planning and control of our business. It has reached the point now where we are concerned about the security of it; and we are probably going to take special pains to secure the equipment and records. Here again, we have programmers; we have systems people; we have what we call computer operators. This is a lot more than just pushing buttons—these people understand the systems and equipment and know what they will do. They do some of the programming—report all of the information possible very quickly and very accurately. This is another area in which some of the people that you will be working with might be interested. This gives you a little bit of a background of what our operation is like, and I think we are very

typical of industry not only in this but in many other areas around the country.

We look for people, of course, like I say we can build on, people that have enough background that we can train such as is provided here at Nashville Technical Institute or the Area Vocational School here--craftsmen, the people building the machine, the people that do a lot of the drawing. Both of these institutions, of course, can train people for us. They have to get the right kind of people in the schools so they can be trained. You can do a lot in your counseling work to sort out the kinds who need help in determining in what direction they are going. Everyone cannot go to college. I do not know what the statistics are, but I think Mr. Phipps mentioned something like 20% receive an undergraduate degree. The percentage is not very large, but it is growing, I guess. For many others, of course, who are looking for something to do in a way to get satisfaction out of what they are doing, whether it is with their hands or the engineering designer who has to have imagination, whether the computer science technician, or whatever it may be, there are many opportunities; and I think they are going to continue to grow. We have found, for example, when we first came to Nashville we had something like 29 skilled people in the factor group; today we have some 200 or more doing the same kind of work skilled with their hands or some kind of creative type job. Ten times as many as we had! We find these people are hard to locate. We are keeping our eye all the time on the people that are coming out of the schools here. We feel that this is going to be one of our best sources of material for the kind of people that we need. We know that as we automate more and more in our business that we are going to need more technicians and more craftsmen and more people with skills. They just do not come off the streets and walk into our employment offices and ask for a job. We have to go out and find them. You, I think, are in a great position to advise youngsters, both boys and girls, that there are many, many jobs some of which you will see Thursday. They can be very satisfying, paid well, a lot of status, and respected--this isn't something you get only with a college degree. They are very acceptable in our business, and we are pleased to find someone that can come in and do a technician's job for us. It is a fine opportunity, and we will be using them more. I think you can do a lot to help the school--you can do a lot to help us by directing the new people toward these interests. We would like to offer our services in any way we can to help you in your work. I think one of the best ways I know of that makes it possible, of course, is for us to keep in touch. Tours of our plant--we are always glad to have teachers come in and look at our plant. We feel that they are the ones that are going to help the youngsters. We are always glad to see you and all we need is a few days' notice to get prepared, to let our people know that visitors will be there, and take you around and show what kind of jobs are available. We would be very happy to have our people sit down and tell you what the requirements are and the preparation necessary.

I appreciate the opportunity to meet with you here this morning. I think this is a great week you are having, and I wish you a lot of luck. If there are any questions, I would certainly be glad to answer them.

INTRODUCTION OF HAROLD J. BLACK

Edward L. Weld, Director
Nashville State Technical Institute
Nashville, Tennessee

Harold J. Black is currently Vice President for Engineering and Development at AVCO Aerostructures Division, the largest industrial employer in the Nashville area. He has directed the project engineering activities of that organization since moving to Nashville in 1967 from his native state of California. Harold has a B.S. degree in Aeronautical Engineering and is a Registered Professional Engineer in California and in Tennessee.

His thirty-five years of professional experience has been predominantly in the aircraft industry, but also includes two years on the faculty of a college-level technical institute at the outset of World War II. His continuing interest in the field of vocational-technical education is indicated by his current service on engineering advisory committees for University of Tennessee Space Institute, Tennessee Technological University, Vanderbilt, and the Nashville State Technical Institute. He was recently appointed to represent industrial management on the Tennessee State Advisory Council for Vocational and Technical Education.

AVCO AEROSTRUCTURES DIVISION

Harold J. Black
Vice President of Engineering and Development
Nashville, Tennessee

Good morning ladies and gentlemen. We are all familiar with the Biblical admonition that a "little knowledge is a dangerous thing," to which I would like to add my own postscript. "A lot of knowledge in the wrong direction is even more so." As my first point this morning, I will try to establish a need for re-evaluating our educational priorities. For at least two generations Americans have figuratively turned their backs on the 'world of work', while pursuing for themselves (and particularly for their children) the higher planes of academia where we hoped to realize a true utopia of personal satisfaction and life fulfillment. Only very recently are we beginning to suspect that a higher academic education does not automatically guarantee a happy and successful life; and that it may not be the very best goal for every individual. In reviewing our educational priorities -- just as we are reviewing many other priorities in the nation today -- I would like to touch for a moment on what I believe to be the relative importance of vocational and/or technical education to our total educational system. Perhaps we have gotten our definitions a little out of order. There has been a widely held and popular misconception that 'mass education' means the same thing as 'education for the masses.' Of course, that is not true. In proving that misconception, I think that some have tended to push higher academic education without sufficient regard for any real purpose of that education for the individual student, and often without any relevance for the real world in which he must live.

Let me offer just one, small, generalized statistic in support of that statement. Most of my friends in state universities tell me that the present dropout rate is about one-third during the first academic year at the university! Is it possible that one out of three of our college Freshmen students should never have enrolled in the first place?

Another popular misconception is that vocational and/or technical education below the B.S. degree level is a kind of "second best" education for "second best" students. As long ago as my own high school days, the vocational curriculum was a "dumping ground" for the academically disadvantaged -- a program where the failing student could fill out his time of mandatory schooling. Guidance counseling has historically devoted more time and attention to the 'college career' student than to the 'career in the world of work' student. Rather recently there have been some encouraging signs that we are all finally adjusting our relative values, as between the formally academic and the more work-related vocational/technical education programs. Today there are twenty-three Area Vocational schools and three Technical Institutes operating in Tennessee. Yet, when I moved here just fifteen years ago, such institutions of special education were unheard of in this state and in much of the south.

Such substantial progress in that short time is more encouraging, and should be a source of justifiable pride to Tennesseans. Another real sign of progress is this week-long seminar on guidance counseling as it particularly relates to careers in the world of work.

For the sake of this discussion, let us then accept the promise that vocational (or technical) programs have a real and meaningful place in the education spectrum; and that, for many students, they represent worthwhile objectives to be sought by deliberate choice, and not merely by default.

Let us next consider whether business and industry have an active part to play in the education process. It has long been my personal conviction that the business and industrial community have a very real stake -- and also a very real responsibility -- in the education process of its future employees. After all, most students will spend more years of their lives in business or industry than they will in their pre-employment formal education period. Furthermore, any industrial or business firm today that does not actively seek to have well-trained, happy, satisfied, and progressively motivated employees is simply not living in the twentieth century -- and probably will not last long enough to experience the twenty-first! Consequently, I submit that a close relationship and an active interchange between the working world and the educational world is much more likely to increase than it is to diminish. Indeed, it is not difficult to imagine a time when business and industry may directly support student-employees to a much greater degree than the simple tuition reimbursement programs that have become fairly common today.

My earlier remarks have been somewhat critical of educators who at times have not assigned sufficient importance to the more work-related curricula as compared to those of a more classic form. In fairness, I must also accept criticism of the industrial segment for some of its recent attempts to directly engage in education. All too often such attempts have been too narrow in subject matter and too limited in achievement potential for the trainee.

There have been a number of widely-publicized programs of specially constructed vocational and technical training which industry has undertaken -- frequently supported by public funds -- in well-intentioned attempts to meet its semi-skilled and skilled employment needs, while at the same time providing economic improvement for the under-employed. Thus, we have seen Job Corps training, "sidewalk techs", JOBS projects, and many others come and go. Many have been locally successful, but none have produced a universal formula for success. I suspect this is because the successes have been attributable more to the personal abilities of the key people involved, rather than being due to the fundamental methodology employed.

To illustrate my point that job training programs are not always the best form of vocational education, let me cite an example that occurred here in Nashville and concerned my own company. Two years ago, we were just entering the production cycle of a major aircraft

manufacturing program that would be active for several years to come. This project demanded an increase in our skilled production complement that could not be met by the locally existing trained labor force. To supply our projected needs, we embarked on the first major JOBS training program that was conducted in Middle Tennessee -- an activity that was carried on until the early months of this year. Supported by federal funding, we initiated a project to satisfy two needs: (1) training of several hundred economically disadvantaged citizens to qualify them for skilled, but specialized, employment; and (2) development of a skilled labor capability equal to our projected manufacturing needs. As a matter of detail information this was a "hire while learning" program wherein each trainee was an employee on the company payroll from beginning to end of a thirty-nine week training period. The first ten weeks were in the classroom, followed by two weeks "hands on" training with standard hand tools, then followed by twenty-seven weeks of on-the-job employment training through a progression of specialized job classifications.

All went well, until a series of near catastrophic and completely unforeseen reverses beset the major program for which the employment need had been forecast. Due to a chain of events completely outside our company's control or cognizance, the build up in production activity was drastically reduced. The relatively sudden and inevitable result was the layoff of a substantial majority of those we had worked so hard to train. Though we have no possible way to follow the subsequent fortunes of every terminated employee, one cannot help but wonder how many -- who had seen real hope for economic independence for the first time -- now feel more disheartened and more frustrated than ever before.

My purpose in relating this local experience is certainly not to belittle honest and sincere attempts by either industry or any other group to help our citizens achieve a better employment status. But I do think the story serves to emphasize two points. First, if there had been a broadly based and well supported vocational training program in this community for the past generation; then our necessarily limited program would have been unnecessary, and the aftermath events would have had a less dramatic and less traumatic effect on those it sought most to help. The second point is more important. Had their training resulted from a broader vocational program, those who were suddenly displaced would obviously be better equipped to compete for other skilled jobs in the area.

From experiences to date, it seems clear that business and industry should not attempt direct involvement in the (vocational-technical) education process. However, as the ultimate users of the end product they do have a proper and useful advisory role in such education. To be even nominally effective, their role must be one of a cooperative partnership with those who are more directly concerned with teaching. Honesty compels me to say that such cooperation does not always exist, and industry's advice is not always welcome. Sometimes it has seemed to me that educators seek not the recommendations of the world of work, but want only concurrence with what they have already decided to do.

There are a couple of general suggestions which I would make to you counselors and which would assist us toward our common objective of more effective vocational-technical education. One is that it is very important for us to recognize that vocational students, who often are in an academically disadvantaged position, have a need for more counselling assistance (not less) than does the college-bound student. Perhaps brought on by circumstances of background or environment, or by attitudes of parents or friends, many vocational students feel a sense of failure by just being in that category. We must make very sure that such feeling, where it exists, is carefully but firmly dispelled.

Another suggestion concerns the important matter of student motivation. Those best able to relate to and motivate today's young people are those who can convince them they are "telling it like it is." And to convince them you are telling it like it is, you really have to know how it is -- first hand. I'm pleased to see that your program schedule calls for two plant tours this week. That's excellent, and I hope you'll visit others on your own. You might be surprised to see how flattered and pleased our business and industrial firms are when teachers -- especially career counselors -- ask to visit and learn about their activities.

I have been asked to identify those specific vocations which will offer the most career opportunities in our area. Without attempting an all-inclusive list, I will mention a few.

1. Machinists. We have now, and will continue to have a shortage of qualified machinists.
2. Air Conditioning. As its usage increases, there is an increasing demand for and inadequate supply of installation, maintenance, and repair technicians who really understand air conditioning principles and systems.
3. General Maintenance Mechanics. There is a broad and growing need for these people -- as a sort of twentieth century "Mr. Fix-It." Demand will increase as the service oriented businesses expand.
4. Computer Technologists. In this area, we may well have reached a temporary market saturation for those in computerized business data processing. However, in dual technology fields -- such as numerical controlled machine tools -- the demand will continue.
5. Environmental Quality Technicians. Rapidly proliferating anti-pollution laws and newly defined environmental quality standards will create many public and private opportunities for trained instrumentation technicians in this field.

There is one further argument for good vocational and technical education that is unrelated to any immediate working career benefits for the individual. Today we hear much outcry about the mess that technology has gotten us into. Of course you and I understand that technology as such hasn't gotten us into anything. Our problems of unbalanced ecology stem directly from the uninformed and poorly

evaluated decisions which we as a people have made -- wittingly or unwittingly -- regarding the applications of technology. I submit to you that improved vocational and technical education will result in a more technically knowledgeable population; and hopefully one that may make better decisions on the uses of technology than have their predecessors.

In conclusion, let me return to my opening comments about our sense of relative values in education. After more than two hundred years, it can still be truthfully said that "life, liberty, and the pursuit of happiness..." are among the simplest and noblest statements describing the goals of man's life. What we have learned in the interim is that it is not always or necessarily true that wealth, power, or advanced degrees are synonymous with those goals.

You have been a most attentive and courteous audience. Realizing nonetheless that you may think me presumptuous in telling you about education, I offer a fair exchange. If any of you care to visit me in our plant, I promise you equal time, equal attention, and equal courtesy -- while you tell me how to design and build airplanes.

Thank you.

E.R.I.C. MATERIALS - V.I.E.W. PROGRAM

Dr. Gary Bice, Director
 Coordinating Research Unit
 University of Tennessee at Knoxville
 Knoxville, Tennessee

After listening to that introduction, I think we should have it rewritten because people will get the impression that I really do not know what I want to do and that may be true. But, it could also be the fact that nobody wanted to hire me for too long of a period of time, and I prefer (and this introduction is one of my problems), not to be called Doctor because I do not think I am old enough to be called Doctor. But you listen to that introduction, and I must be pretty old. Really, it is not that extensive. I thought Mr. Phipps was going to say that I finally saw the light and came to Tennessee. I am not sure how bright that light is at this point.

We are in the middle of budget hearings with both the State and the University; and if you have anything to do with budgets, you can understand the predicament we get in. Both have different objectives, and we have to try to work between the two of them. I want to take just a few minutes to give you an indication or some idea of the overall purposes or objectives of research in vocational education. To start with--some of our specific objectives--how we are trying to meet the needs of primarily teachers, administrators, and local personnel in this State. I will turn the second part of the program over to our Information Coordinator, Mrs. Wilder, who really gets down to the grassroots and works more with individual teachers and others than I have an opportunity to at this point. I am not sure if you are going to be able to hear me, but I do need an electronic blackboard over here. To hold to my schedule so I do not hold you over your lunchtime, I am going to read partially what I have to say and hope that you can grasp some of this material. If you have any questions at any time, please do interrupt me and we will see if we can answer them. If we cannot, we will tell you that the next expert will take care of that part of the program.

Educators do not look at research and development the same way business and industry do. Business and industry has usually up to 10 percent of their budget set aside for research and development purposes. This is how they come up with new products and so forth. Education never has thought in those terms until recent years. In vocational education, we really have some research money. The 1968 Amendments to the Vocational Education Act of 1963, called Public Law 90-576 Part 3, really authorizes money for research in vocational-technical education. It authorizes not appropriates--there is a considerable difference there. The money is set aside primarily for research in training purposes, experimental development, and pilot programs, and for the dissemination of information. Research in training includes training of teachers, lay personnel, and any of our prime help groups that we need to get at. The area of research

literacy primarily--to be better consumers of research. We have \$100,000 worth of research--most of it still laying on the library shelf. Our purpose is to get that research off the shelf and into the classroom or get teachers and others to apply the results of research, results of experimental research studies, very highly-controlled types of research development where we have an idea, and we want to come up with a curriculum guide or handbook or a new type of program and pilot programs to put it out in the field to show people how it can actually work, and on the firing line ultimately.

Our third area where we use research and development funds is in the area of dissemination of this information. Get it before the teachers and others--I am aiming at teachers but I mean guidance, supervisors, administrators, teacher educators, and others--these are the clientele that we deal with primarily. We need to get this information to them in any form that we think they will use best. We are not sure we are successful, but we are trying. I think the traditional type of research has usually been quite experimentally controlled. We think of it in these terms, I think, and in fact it has been mostly graduate-centered. Most of your research is done by graduate students in dissertations and master's thesis. How many teacher educators in general education, number one, and vocational education, number two, (here you can draw a dichotomy between the two and I would like to but we cannot) and professors sitting in the seat of learning are really involved with research that is action-oriented or even basic research? I think you could count them on not too many hands really. Up until this point in time, research has been primarily graduate centered. You had to do it to get a degree, master's or doctorate. The professor did not have the time to do it or he was not interested, one or the other. To get it done, graduate students have been forced (no, they have not been forced, just kind of coerced--if you want a degree you do it.) Well, needless to say this has people concerned and, well, really puzzled if nothing else.

We have been trying to get research efforts into a programmatic plan or program. Really this is a programmatic research effort to systematically solve problems that exist out in the field among teachers and people like you in the guidance profession. It should be mission-oriented with a specific problem in mind that we are going to solve. We cannot afford, particularly in our field of vocational education or in education itself, to be doing research for the sake of doing research. It is too expensive. We cannot see results when we reach the psychological problem of people not seeing the benefit of doing anything that you cannot see an immediate payoff. There is a need for basic research and experimenting and doing research for the sake of research to explore the alternatives to any particular thing that you may be interested in. But our research and programmatic effort now is hopefully missionary in its design so that we can take it and disseminate it when we get through with it and make some use of it. Our overall goal is the improvement of the student who gets out of that school. We hope to improve the program, and the teacher will resultedly improve that school or some aspect of that school.

A lot of people have worked in this area of research and development models. Just to give you an idea of some of the areas that we are concerned with, we have Dr. Moss of the University of Minnesota. He happened to draw a lot of people's ideas together and put them on paper and type his name to it, so this is really a national effort. It is not his own ideas, but there are some of his own ideas. I am almost feeling like that phony agent in Green Acres. I catch myself talking like Mr. Kimble does. Nothing is really that absolute is what I am trying to say. Yet, we do have a responsibility when we see a definite need for some basic research. This is part of the overall total curriculum. Curriculum materials are another area where we ought to be doing some research. Program evaluation--what is happening to the product after they get out of our classes or one course even? What happens when he gets out of school? We need to stimulate research efforts. We do this in a number of ways which I will explain in just a couple of minutes. We need to identify--I am not sure inventing is the right word--to identify and put together some prototype models. Hopefully, not on the L-1011 so it becomes extinct because one little aspect fell through such as Rolls-Royce. Rolls is not a little aspect. One part of the total plane fell--did it fall apart? One main part, and this had a massive chain reaction effect. We do need a prototype that includes the total system of education, school training, and we need to take a look at some new knowledge. We, in vocational education particularly, and I am within trying to fight within and this is where I do consider myself a rebel, not necessarily because I am in Tennessee, but I knock heads with some of the people in Tennessee--we ought to be looking at performance contracting and the voucher system in vocational education. Let us not say that we have all of the answers for any students coming into the classroom. We need to take a look at some of the other areas.

Applied research: this is primarily where our efforts are aimed, administering research monies: and finally, I made the point back earlier that monies were authorized. Sure they authorized us something like \$30,000 nationwide in 1968. We never got a cent (well, we got a few) up until this current year. Finally somebody said, "Hey, Mr. President, the law says 10 percent of the funds allocated to vocational education must go for research. You have to use them for research." Previously, they have been taking them and using them wherever they wanted, but somebody held them to the law this year. As a result, Tennessee--I don't think I am out of school talking about the amounts of money that we are dealing with and they sound quite massive, and I thought so when I came to Tennessee, but there really aren't that many--we have been getting Federal funds to the grand total of \$18,000 a year. Now what can you do, what type of research and development efforts can you carry out on \$18,000? Fortunately, this state did add some money to that pot so we had the previous year's making a total of \$100,000. Nevertheless, the total Federal allowance was only \$18,000. For two years we never got the appropriation until March. Eighteen thousand dollars may be hard to spend for Knoxville, UT, but you could spend that on a very small research project. Ten percent of that money has to go for research. Five percent of it you can still keep to administer as you want, but you must use it for research and vocational education.

The other 5 percent goes directly to the State to use as they want to solve some of their problems. Mission oriented, that I talked about back here. The states know what their problems are, let them have the money and solve their problems. We got \$430,000 this year. The question is what are we using that money for? We are using it to study what we spent the \$18,000 for. All of a sudden, nobody knew it was coming, we had no idea the additional funds were coming. All of a sudden they were there, and we had to use them. We have systematically developed a plan, we think, to utilize those funds to get the maximum payoff. Conducting training activities, and we are seeing some of the things here that we are using research funds for -- primarily vocational education, disseminating results, and we have more to say but we won't. Some of the duties and responsibilities revert to you. By the way, the State can use the money any way they want to for research. Most states got started in the RCU business because the Federal government did provide some seed money starting in 1965, and this is where our first RCU got started in this state. They were directed and had to meet the objectives from Washington, not from the State. This is why some people feel that the first RCU in this state wasn't meeting the needs of the State. They were getting 100 percent funding from Washington and they had to answer to Washington, not to the State. That is why there was a change in 1968 to make some of the funds come to the State. Now the State can use the money the way they wish.

RCU's in some states are passed directly to the State Division of Vocational Education and some of them are attached directly to universities, some of them are attached to community colleges; and some go to completely private agencies. This is just an administrative matter. The reason it is attached to the university in this state is the fact that they felt the university could pay higher salaries; and Mr. Phipps said that I do get paid by two places and that is right. I may get two paychecks but totally they are not as big as one should be. Salaries are not that much greater. We have our problems too. We can pay other people easier than we can pay ourselves. At this point in time, our staff consists of about five full-time professional people, a number of graduate students that varies during the year, some clerical and supporting staff, what we call the librarian and a fairly decent information system. I have to say that, my Information Coordinator is here. We will be expanding because next year we are expecting the same amount of research funds that we had this year, and we think we can use them very effectively.

We do provide consultant services to individuals and groups of people in the State who are interested in research projects or development projects--underline development--we are mostly interested in development. We will help them write proposals. We resist the fact of writing the proposal itself, but we will help people write the proposal. We will give them considerable amount of information, and we will essentially do a review of the literature for the person. Then we either find the money to fund the project or fund it ourselves, and we do have the capability of funding research ourselves. We review the proposals as they come in, and we do get some unsolicited ones.

We hope that we get more unsolicited, but people are afraid of research. They are thinking back in terms of the traditional type again--very discipline-oriented, experimentally controlled, and graduate centered--they still think in those terms. So, we are having a hard time in it. We have not been completely successful yet in getting people to submit proposals on their own. We do conduct some research study, but we are a Research Coordinating Unit and not a research unit, so we hit this one very, very lightly if we can.

Dissemination of information: We use any type of method we can to get this message to the people. We think that in order to make sure--I talked about the research that is on the library shelf--to get it out to the people, we need a practical information system. We do have a fairly good system, I think; and we need to emphasize two-way communication. Most of you probably are not familiar with our RCU circulator. But we do have a monthly (during the school year) awareness paper where we try to get the idea to the teacher and provide some methods through there to get feedback from the teachers. The only way we can improve our program and help solve problems, problems as they exist, is if we get feedback from the field. We need to be linked to E.R.I.C. Any information system needs to be linked to E.R.I.C. so that they have access to all of the information and research efforts as they have been completed to prevent overlapping of efforts. We need to think in terms of stages of adoption in order to make people aware of what is going on. I mean to get them to ultimately make a change in the classroom where there is an instructional technique, a curriculum, an administrative change (if it is at the administrative level), whatever the change may be. First of all, I need to become aware of what these new ideas and their changes or innovations are, and then we need to get them interested somehow so they will say, "Maybe that is a good idea." Then they need to take a look at it, evaluate it, and determine themselves whether or not it is a good idea, and then we need to get them to try it out. I hope you can see how our program does work towards those goals.

In making people aware, we have to provide a variety of outputs for all of our audiences. As I have said, our audiences are teachers, supervisors, administrators, teacher educators, State Advisory Council personnel, legislative people--you know they still hold the purse strings so we have to be concerned in that area--and the general lay public we need to get at in some ways. We have tried a variety of methods to get to people. Our information then would be quite easily accessible, and I think Mrs. Wilder will tell you how we make some of our information accessible. We still need this one-to-one interpersonal communication. The best way to accomplish change is by getting right down and working with the individual with his or her problem right in their particular physical location. As we proceed through our program, I want to back up to proposals just a little bit, both the solicited and unsolicited proposals. We request a prospectus, a two or three page write-up of your idea. What it is that you want to do, how you want to do it, and how much it is going to cost. Then we take a look

at it within the RCU. If it is a good idea, let's go a little bit further and we will encourage a complete proposal; or if it is no good, you know all ideas are simply not good. Unfortunately, some of our people don't have access to information. Some problems are already solved when we have someone interested in it, but they still want to research the same problem. This is why we encourage a prospectus first, to take a look at it. If we have the answer, we will give you what information we have on it. You won't have to spend your time in trying to answer the question.

Our priorities in research and development we have--and they are determined primarily by a statewide conference of guidance personnel, general educators, school superintendents and principals, technical institute people, community college people, teacher educators, teachers, and others--had some conferences which bring people together who really chew the fat. That is not quite true. Chewing the fat is not accomplishing anything is it? We really get in the nuts and bolts of the problems. What are some of the very specific problems they have that we ought to be spending some time on? After these problems are identified--and I will briefly go over the major problems that we are talking about in this state as a result of our conference in February--we also have an advisory council made up of business and industry personnel from technical institutes, community colleges, universities, and teachers to give us guidance throughout the year. We have been meeting every other month. Unfortunately, the last couple of months have been pretty busy and we have not been able to meet lately. But, we do try to use an advisory committee full-time during the year to keep us on the right track and to keep us in touch with the real world.

Our priority areas are:

1. A management information system for vocational education in this state.
2. A curriculum development--revising or up dating curriculum.
3. Pupil personnel services.
4. In-service teacher training.
5. Alternative delivery system, and this is where we talked about performance contracting and development systems.

These are the five major areas. A lot of things can fit under any one of those areas. So, we haven't narrowed it down very much yet. We are grouping them into the five categories, and we are putting our first emphasis on the management information system.

Just a little bit of review here. We are trying to prevent some unnecessary duplication of both research efforts and dissemination efforts. We are trying to develop a system for innovation. Very specifically now, our objectives of the RCU are:

1. We think our first effort in this whole area--getting at our five priorities and we are going to mix these together if you can picture it that way--is information retrieval and dissemination. We think this is the first thing we have to get moving very rapidly.
2. We need to stimulate and encourage occupational research. We do this by providing graduate assistantships. We have had up to as many as eleven graduate students at one time or another this year. We do pay the most of any graduate assistantship in the College of Education. This causes some problem because of the competition among the students.

We provide some training sessions out of the State to get to the people. Our mini-grant program is under the area of stimulation where actually any teacher, supervisor, administrator, graduate student, anybody can submit to us a little proposal, \$500-\$600-\$800, to carry on a little research project on their own in their own school. We hope they can become a little more interested in research and see how easy it really is. We have to be sophisticated at the University and say it is hard and highly academic in nature and it really isn't. We are trying to solve problems. We have mini-grants going, for example, to do a community survey to identify specific occupational training needs, to identify specific work opportunities or job training opportunities in local areas, to do evaluations of your local programs, to conduct a follow-up survey of graduates of the programs, and to use a multimedia approach in teaching the adjustment of automatic transmission. These are some of the things--research projects and mini-grants--that we have funded to identify the desired characteristics of a beginning business and office teacher. Okay, we try to coordinate research activities. Memphis State is doing some work, MTSU is doing a little bit, Cookeville would like to get interested, and UT has several different groups of people doing them. Then we have to coordinate activities with the regional United States, Southeast, and nationally. We do find that some of the things we are trying to solve are the very same things that the people over in Mississippi, North Carolina, and other places are trying to solve.

Now, I will just take a couple or three more minutes in the area of Pupil Personnel Services. We are anticipating this next year a project of approximately the \$60-\$80,000 range, which is what it is going to cost us. How many of you have heard of the V.I.E.W. system? The V.I.E.W. system is another type of microfiche where occupational information is placed. Take a photograph and reduce it and put it on this film. We will be using a 24-1 reduction which can be used under the power of a regular microfiche reader and reader printer. On the card you can have access to it by punching out certain numbers. The information presented on the filmstrip, if you want to call it that, are on the microfiche. What are the training opportunities, and we hope to localize it to county level, not on a statewide level. We find some people doing it on a state basis and really a machinist would not get the same at AVCO as he would up at Kingsport or Memphis or Chattanooga. So we need to localize it quite a bit more. So, what are the training opportunities; what are the educational requirements

for every student going to get this type of training. What might we expect in terms of salaries, wages, and fringe benefits? What are the physical limitations of the job? That type of information we hope to identify for up to 300 different job titles this coming year and get out on this little aperture card (and we will have our own for Tennessee) and disseminate it to all guidance personnel in the state. You will get those that are appropriate to your geographic region. You will also have access to those on a statewide basis if you want it. We hope to--and Mr. Phipps was very instrumental in conditioning some people to thinking they needed this in the State, and we appreciate his efforts--hope we can see some of your recruits tomorrow. So, this is one of our other big projects that we are working with and we hope to enlist the support and help of a large number of guidance people get this information for us out in Jackson or even here in Nashville. Obviously, we cannot get a large enough central staff to go around the state and dig up all of this information on every job. So, we hope to contract with individual guidance personnel to provide this information to us and then we will put it in consistent form and reproduce the aperture card and send them back to the school. They are quite easily stored. We can get eight pages on this one little aperture card, and you can retrieve it very rapidly. There is other supporting information that you can get if you need it.

Video tapes will be the next step. Provide video tapes and slide sets on the occupations under consideration--on each occupation. So, a student can really see what is going on in business and industry. Now that is a couple of years off, the video tapes and slide sets. We have to get this operating first.

I think I have taken a little more time than I had anticipated. Mrs. Wilder will provide some more details about our information system, how you can use it, its capabilities, and the microfiche. I will send you hard copies of materials. I do have to leave you and get back to a budget hearing with the trustees this afternoon so I will be leaving shortly. Do you have any questions?

Mrs. Wilder will talk more specifically about how we are trying to get these microfiche materials and how our network is being developed. We are still in the growing process and the evaluation of it also. Mrs. Wilder is our Information Coordinator. Every project we do features the information system so she can then get it out into the state.

E.R.I.C. MATERIALS - V.I.E.W. PROGRAM

Mrs. Dee Wilder
Information Specialist
University of Tennessee

I want to start out today by telling you a little bit more about ERIC, or Educational Resources Information Center. It is a national information system for education and consists of 20 clearinghouses which are located all throughout the United States. There are four major components of the ERIC system (Transparency No. 1). The first is Central ERIC, the sponsoring agency at the U. S. Office of Education. It operates, as of now, out of the National Center for Educational Communication, or NCEC. The second component is the ERIC Facility. This is where all the computerized materials come from and, as Dr. Bice mentioned, this sponsorship changes frequently. National Cash Register (NCR) used to have the contract to supply computerized materials and now it is in the hands of another firm called LEASCO. So, we at the RCU receive our ERIC files on magnetic tape from LEASCO, but overall the source is referred to as the ERIC Facility. The third component is ERIC's twenty clearinghouses, and I will explain to you in just a little bit how they feed the information into Central ERIC. Finally, the ERIC Document Reproduction Service, better known as EDRS, supplies us with our microfiche.

Now, what kinds of materials are in the ERIC files? Most of the materials are research or research and development projects. Many of them are U. S. Office of Education sponsored projects and can't really be called research, but they are developmental projects. Each document is submitted to an appropriate clearinghouse. For example, if it is information in the area of vocational-technical education, it is sent to the Vocational-Technical Clearinghouse at Ohio State University. If it is in science education, it goes to the Science Education Clearinghouse. If it is in the area of educational testing and measurements, it goes to Princeton, New Jersey, to the Educational Testing and Measurements Clearinghouse. It remains in the clearinghouse for about three months' time, and during this time it is screened, abstracted, and indexed. Indexed terms are assigned and new terms will then be placed into the ERIC Thesaurus. I will discuss the Thesaurus and the use of it a little bit later. Each ERIC document has a variety of different index terms known as descriptors, which appear in the resume of the document along with the abstract. The abstracted document goes on to the Research In Education contractor where it is edited and a camera copy of the particular index is prepared. Research In Education, better known as RIE, is ERIC's major publication. There is a copy of it over on the far table and I invite all of you to take a look at it a little bit later. I know some of you are already familiar with it. RIE, then, is sold by the government printing office.

An advantage that Dr. Rice mentioned briefly a minute ago is that we can disseminate our microfiche materials at a rate of about ten cents per microfiche. One sheet of microfiche contains up to seventy pages and only costs us approximately ten cents to reproduce. As you can see, State RCU's normally would have a standing order of microfiche. We receive the entire collection and we get each successive order as each new one comes into being. By doing this we can receive the microfiche at a much less expensive rate. Otherwise we would be paying approximately twenty-five cents per microfiche and with our standing order we pay approximately eleven cents for each microfiche document. So, microfiche can be disseminated and obtained much cheaper when you have a standing order and, of course, libraries are usually the people who commit themselves to a standing order of the ERIC files. As I mentioned before, the RIE Index is sold by the government printing office and the ERIC Document Reproduction Service sells the microfiche and hard copy of documents. Now this indicates, of course, that you can obtain both microfiche and hard copy of any document or almost any document which is listed in the ERIC file. Almost always the hard copy will be much more expensive than microfiche. This is why the RCU is able to conduct such a large state-wide dissemination system - because it is relatively inexpensive. Once we have the microfiche, it only costs us between nine and ten cents to reproduce one.

In reading a microfiche document, if you have access to a reader-printer you can print out individual pages if you like. In other words, if I had a piece of microfiche with seventy pages on it, I would print out the whole thing at the rate of ten cents per page. That is considerably more expensive than just having access to a machine and using the microfiche copy of a document. The item on the far table is just a reader and it sells for around eighty-nine dollars. Dianne Groves and Janet Turner, who spoke to you earlier today, have a reader-printer in their library here.

At the RCU then, we subscribe to all of the ERIC collection which is not just the RIE Index. ERIC has several information products (Transparency No. 2). The primary one, as I mentioned, is RIE. A relatively new one is called CIJE, or Current Index to Journals in Education. This publication has been in existence since April, 1969, and at that time articles from approximately 250 journals in the field of education were abstracted. In 1970, and from that time on, CIJE has been indexing from over 500 different journals just in the fields of education and psychology alone. So they have pretty much covered everything, including foreign journals. CIJE can save you the trouble of going to the Education Index, Psychological Abstracts, and Sociological Abstracts. The normal procedure, if you are doing research at a particular university, would be to consult all three of those I mentioned, but that really wouldn't be necessary as CIJE is an index to the articles contained in each of those and more.

Where RIE has a lengthy abstract for almost every one of its documents, CIJE will have, most of the time, a one or two-sentence annotation; just a brief description of the article. Keep in mind that these are all journal articles and the material from RIE is

research and development documents. These are the two major publications and we have both these indexes in our library at the RCU in Knoxville. Also, if I'm not mistaken, Mrs. Groves and Miss Turner are planning to have both of these publications on file here at Nashville State Technical Institute library for you to use. Now, in addition to these two, there are some special collections in the ERIC files. The documents indexed in these are also on microfiche. PACE, Projects to Advance Creativity in Education, are all projects which were funded by the U. S. Office of Education. Some of the projects are still on-going but the funding is no longer in process. The Manpower Index contains strictly those documents relating to manpower. These were funded by the Department of Health, Education, and Welfare; Labor; Housing; and Urban Development; Agriculture; Defense; and Office of Economic Opportunity. There is a variety of documents in this index. I don't believe these two special collections will be on file here in Nashville, but at any time you are welcome to request a loan copy of the index and, if you happen to be in Knoxville using the library, of course, you can obtain the microfiche of the documents listed in these indexes at that time.

The clearinghouse that we at the RCU work most closely with is the Clearinghouse for Vocational and Technical Education, better known as V-T ERIC, at Ohio State University. This clearinghouse supplies us with a considerable amount of additional materials in both hard copy and on microfiche. As I see our library it is a kind of a "mini" library, because it is small and we are able to house a large number of documents in a much smaller amount of space than you would if you had hard copies of all the same documents. Our library consists mainly of the ERIC files, V-T ERIC files, and Tennessee Research and Development projects, the documents from the State Department of Education and the Division of Vocational-Technical Education. The first three of these are probably the most utilized of our library materials. As I mentioned, V-T ERIC supplies us with instructional materials, research reports, curriculum studies, conference proceedings, and information and analysis papers. We have found teachers to be very much interested in the curriculum studies and instructional materials that we have. We are very proud of this fact and we try to tell people as we get instructional materials from V-T ERIC which ones of those we think they might be able to use. This is the kind of information that comes out in our monthly CIRCULATOR. If any of you are not already on the mailing list for the CIRCULATOR, you may request that your name be added. The CIRCULATOR is usually just two pages long and doesn't take long to read. I'll take your request today, if you would like, or simply write us at the University of Tennessee in Knoxville and we will be happy to add your name. There are some publications which come out of the V-T Clearinghouse in addition to the ERIC materials listed in RIE. They are almost all instructional materials and are listed in Abstracts of Instructional Materials in Vocational-Technical Education, better known as AIM. As we set up the information system this year, we established thirteen Regional Resource Centers throughout the state and Nashville is cooperating as one of these. Each Regional Resource Center, including Nashville, has a mini collection of the microfiche

which you, of course, would have access to. Many of the materials requested by the RRC's from the RCU are from this particular index. (Transparency No. 3) There is a copy of AIM over on the table for you to look at. It's brother publication is ARM, Abstracts of Research and Related Materials in Vocational-Technical Education. There is some overlap with the documents listed in the RIE and ARM indexes as they both contain research materials. With the large amounts of federal funds allocated for research on the disadvantaged in the last few years, this clearinghouse, in relation to the other nineteen, has had probably ten times as much material to index. So they have had to do something with it, and, rather than not include it in the ERIC files at all, they have published it in the form of an annotated bibliography. Hence you have these two additional publications which are listed as such in the RIE index. Is that clear? Do you see how this clearinghouse operates so that if an individual so desired he could subscribe to these two indexes and get only the groups of microfiche listed in AIM and ARM rather than getting the whole ERIC collection? The Regional Resource Centers will probably discover that these vocational-technical documents are really the most valuable to them. There are some very valuable general educational documents located in all the ERIC indexes. Right now we are just loaning our extra RIE indexes to each of the regional centers and asking them to request some general ERIC materials as well as some vocational-technical materials if they so desire.

To give you an idea of what happens when a request reaches the RCU office, let's look at this flow chart (Transparency No. 4). First of all, the request is reviewed. It may come in by mail or by phone or an individual may just come walking into the office and ask for some specific information. We at the RCU review the request and determine how urgent the need is. Then it is referred in one of two ways. It either goes to a graduate assistant who writes it up as a computer search or directly to the library where it awaits a manual search of the files. I mentioned earlier that the ERIC Facility supplies us with computer tapes, magnetic tapes of all the files. In other words, everything that is in these indexes is also on magnetic tape and, rather than going through these files by hand, you can have the computer do the searching for you. We charge fifteen dollars for the search and, in most cases, we can get the search back in two to three days. With each search, we will have searched the files completely from 1966 to the present time, and will have almost all of the documents identified by the search on microfiche. We now have microfiche files complete through March, 1971. So, this would bring an individual right up to date, and, except for a three months lapse in time when the document is in the clearinghouse being processed, we have almost immediate access to any research or instructional document that is being done and that the ERIC system is aware of. So, either the printout from the computer search or the compilation of abstracts and bibliographies from the library manual search are then brought together and sent out to the person who has requested the search. Keep in mind that the individual just has abstracts or, in the case of journal articles, he just has a one or two-sentence annotation of the documents we have identified.

So, he has to review all these documents, and then select the ones that are relevant to his needs. Then, he requests the microfiche from the RCU or from the Regional Resource Center here at Nashville State Technical Institute, for example. In your case you wouldn't have to come all the way to Knoxville to do a manual search, but, if you desire a computer search, you would need to come to Knoxville for a conference regarding your interests. After the request for microfiche is sent in or brought in, we retrieve the relevant documents from our microfiche files, put them in a package, and mail them all back to the user. He can use them as long as he has access to a reader or a reader-printer. If he does not have access to one of these machines, he will probably need the documents in hard copy. Of course, this is a little bit more expensive. If we have them as part of the RCU library, however, the hard copy will be sent to him on a loan basis and the user is free to xerox materials as he wishes. So, it really doesn't cost you anything to use our library if you don't purchase personal copies of everything.

I know some of you are familiar with the ERIC index and know how to use it, but I'd like to review the procedure just to be sure. (Transparency No. 5) I have also set up a little display on the table in the corner taking you through the complete procedure of selecting your index terms from the Thesaurus, looking in Research in Education subject index, and so on. There are three major indexes all in the one publication: subject, institution, and author. So you can retrieve a document in one of three ways. After you consult the Research in Education index under your appropriate descriptors, and in your case it may be vocational guidance or guidance and counseling, job placement, vocational placement, or whatever, you note the ED number and turn to the corresponding ED number in the front of the index where you will find a resume of the complete document. After you have read a 150 to 250-word abstract about the document, you may decide it is not what you really want after all. So, you are able to eliminate it without going to the microfiche files. If you do want it, then you need to request the document by the ED number which always consists of six digits. We retrieve almost everything by ED number. We don't need a title, author, or anything else unless you should happen to have an incorrect ED number. So, if you request by mail, you would, for example, come to the Regional Resource Center here at Nashville State Tech and tell Mrs. Groves or Miss Turner that you would like a particular ED document on microfiche. That's all you really need to do. You can fill out a request form with your name on it and we will send the material directly to you or we can send it to you in care of the Regional Resource Center here. Of course, the microfiche copy you will receive will be the complete document, including the bibliography. It's not just a rehash of the abstract. It is the complete document just as if you had the original hard copy. Every page is filmed and put on microfiche, even if it just has one or two words on it.

I brought a map today to give you a little bit better idea of where the other Regional Resource Centers are located throughout the state. (Transparency No. 6) The RCU, of course, is located in

Nashville. Existing microfiche collections with the dash indicate that there are microfiche collections, in other words, partial ERIC files, not necessarily complete, at Tennessee Tech, Peabody, and Memphis State. Now, in talking with the people while we were setting up the Regional Resource Centers it was necessary to contact them to see to what extent the public was able to use their microfiche files. In most cases the ERIC files were seen as a supplement to materials that they already have, and not as a replacement for these materials. In some cases the reader was used very little. So, you see, we had to eliminate them altogether as even existing in terms of the personnel we were interested in serving, or in terms of vocational teachers or all teachers in the state being able to use them. There was no one there designated to instruct the individual in the use of the ERIC system. You either had to know or go in and find out for yourself. So, we placed a Regional Resource Center in the Memphis area and in a few other areas where partial collections already existed but weren't available for public use. The Regional Resource Center here at Nashville has been used considerably since it has been in existence and I would like to encourage you to use it often. I think you have a real advantage in the fact that two persons have been instructed in the use of the ERIC system and are here to help you learn. Mrs. Groves and Miss Turner both appear very helpful and are very eager to help you. They are both very familiar with what the ERIC files consist of and have a total picture of ERIC as a nationwide information system in education. They also can give you some idea of what is there and not just in the area of vocational-technical education, but in all areas.

Now, may I answer any questions for you?

NOTE: See Appendix, Pages 166 - 171 for Handouts.

ELECTRONIC ENGINEERING TECHNOLOGY

Wayne Jones
 Assistant Professor
 Nashville State Technical Institute
 Nashville, Tennessee

You have heard the term "technician" mentioned at NSTI. Since your background is counseling you may not be familiar with this term and I would like to give you a brief analogy of where an engineering technician is in the hierarchy of engineering as compared to the medical profession.

Professional Engineering

4-year Engineer
 4-year Engineering Technologist
 2-year Engineering Technician
 Industrial Technician
 Craftsman

Medicine

Medical Doctor
 Medic
 Registered Nurse
 Licensed Practical Nurse
 Nurse's Aide

There is one interesting point in that in the medical profession you cannot advance into a different category unless you take additional training and academic work. In the engineering profession, however, each person can advance on his own merit. A four-year engineer can do design work and a two-year technician can also do design work if he had the ability. You are not limited by social laws, it is your ability.

To further define the academic difference between a four-year engineer and the technician we would have to look at the science and math areas. An engineer is probably 90 percent theoretical and 10 percent application oriented while a craftsman is 10 percent theoretical and 90 percent application. The engineering technician lies somewhere between these two extremes.

An engineer may be interested in the effect of temperature on electrons on the dark side of the moon. The technician would be more concerned about the normal temperature effect on an electron at room temperature here on earth. The analysis of these types of extremes involve different levels of math.

The engineer may use differential calculus or advanced calculus, while a technician may work with basic calculus and differential equations. The engineering technician primarily uses algebra to solve most of his equations.

Technicians and engineers usually work in teams. The engineer may have several technicians under his control. Since the engineer is now theoretically oriented, the technician has someone to go to for answers to some problems.

Two-year engineering technicians have an option after graduation, to go to work or to continue their education. With the two-year Associates Degree he may go on to get his B.S. degree in engineering technology with only an additional two years. This approach is referred to as the 2 + 2 program. The end product is a technologist (B.S.)

There are no 2 + 2 programs presently in the state of Tennessee but they are available in other states (i.e. Southland Institute, Georgia).

To bring some of the things that I have mentioned to a conclusion, I would like to offer you a tour of the electronic laboratories. In the lab I hope to bring out the program in more specific detail. These details will consist of theory, it's application, and the equipment involved in our courses.

BUSINESS DATA PROCESSING TECHNOLOGY

James Marable, Head
Business Data Processing Technology
Nashville State Technical Institute
Nashville, Tennessee

The greatest problem we have in Data Processing is the orientation of prospective students to an understanding of the function of a computer in a business environment. As an example of confusion, can anyone here explain the words "Data Processing"? It is really simple, turn the words around and you have your explanation - "Processing Data", that is exactly what the words mean. So, by virtue of this problem rather than spend time on curriculum, which is available in the bulletin, I believe it would be of greater value to enlighten you on the function of a computer in business and how a technician dovetails into this operation, so that you as counselors, can relate this to the students yourselves. Our first attempt will be a tremendous film that presents an overview on how the computer works by using people as an analogy; a description of what a program is; and how it works; and the different computer applications that are currently being employed. The film is titled "Man and Computer a Perspective" and will run approximately twenty minutes. Next, Mr. Grinder, Assistant Professor in Data Processing, will cover DP job titles and a description of each. Also, you will receive a handout of the titles and descriptions. Our final exercise will be a tour of our outstanding computer facilities with an explanation on how the equipment is used and how it relates to the topics covered in the film.

(After The Film)

The film pointed out numerous computer applications, but did not point out that the majority of computer applications are business oriented. In other words, the computer is used primarily to keep business records and produce business reports. By virtue of this, Nashville State Technical Institute is involved in training students to apply the computer in the business areas; therefore, the program is appropriately entitled "Business Data Processing". Many of the technical institutes and colleges do offer a program entitled, "Computer Science" for students who prefer to work in a scientific environment, but, from past experience, we have not seen an appreciable demand for these technicians.

Technical Education in Data Processing is not new to Nashville. The data processing program started in 1964 and was administered by the Metropolitan School System until the Institute was developed by Mr. Weld, the Director, who incorporated the program into NSTI. Because of our previous existence, the program has placed many of the DP managers, programmers, and operators in the local area. I personally know of one of our graduates who is earning a salary of \$16,000 per year and do not know of a graduate in the past four years that did not acquire a job after graduation.

Data Processing has been a wide open field with unlimited opportunities and I believe this will hold true in the future. So, our graduates have a unique position for immediate employment and the potential for unlimited promotion, because they are working in the heart of the companies' accounting systems in computer conversion and maintenance. So, as counselors please advise your students interested in Business Data Processing to take all the business courses available, especially accounting, and at least one year of algebra.

NOTE: See Appendix, Pages 172 - 174 for Handouts.

BUSINESS DATA PROCESSING TECHNOLOGY

Raymond E. Grinder, Jr.
Assistant Professor
Nashville State Technical Institute
Nashville, Tennessee

I would like to direct your attention to the job descriptions that have been distributed to you. These are computer-related job titles that are presently being held by the people around town in the different industries who are doing the computer and data processing work. This classification allows the management of an organization to separate the different functions that are performed around a computer center into job types that are then filled with people of the appropriate level of training and experience. There are three types of beginning programmer jobs and higher level positions continuing through experience, advanced, and senior programmer. These higher positions are ones that our students will work toward after entering an organization at the beginning level. The slot in the company for which we are preparing the students is the beginning, non-college trained programming position.

I have worked in the computer programming area for approximately six years prior to joining the staff here at Nashville State Technical Institute. One of the things that I have found to be most noticeable about the profession is its emphasis on your ability to perform regardless of your background and training. For instance, a college degree may be instrumental in your getting the job initially but once you are accepted into the organization you are expected to produce. This means writing programs, producing reports on time, etc. In this respect, I feel that this field has quite a bit to offer young people because it gives them a chance to be evaluated on performance instead of some pre-conceived idea of what a successful person in the field should be. It has been my experience that people without a college degree fare as well as those with a degree and in many instances do better.

I think the employers are going to be pleasantly surprised with the students that we graduate here based on their ability to begin with very little training and to advance to the status of being a productive employee in a very short time.

One of the additional benefits of the training here that I have noticed is the ability of the students to obtain the lower level jobs in data processing after taking only a few courses here. These students will generally hold these jobs through the duration of their stay here and be in a good position for advancement upon graduation.

We are primarily trying to train our students so that they will have a sufficient background to enable them to enter a data processing center and be familiar with the equipment and computer languages to the extent that they will be productive in a minimum amount of time. In this regard, I believe that we have been successful.

THE EMERGING WOMAN: IMPLICATIONS FOR THE SCHOOL COUNSELOR

Dr. Gilda Greenberg, Associate Professor
University of Tennessee at Nashville
Nashville, Tennessee

In the past few years, many articles have been written about the changing role of the American woman.

Before counselors begin to set procedures regarding the counseling of girls and women, a brief review of some underlying historical and cultural perspectives should be examined.

Although there were women who attempted to change the image during the 18th century, it was not until 1848 that feminism became fully organized in the United States. This occurred during the First Woman's Rights Convention in Seneca Falls, New York. The road ahead was still traversed with many obstacles since there were factions which forcefully verbalized the female's "natural tendencies" rather than her potential attributes. The changing role of women could, therefore, be ascribed directly to the industrial changes of the 19th century. The impact of technology, on the reduction of home chores for middle-class women, increased the amount of time available for activities outside the home environment.

After World War I, dramatic changes became more apparent due to the increase in the employment of women in the labor force. The period of the 1920's can be considered the "superficial mark of a new social equality." It was during this time that women began to smoke and drink in public, participate in new intellectual, economic, and sexual freedoms. The most dramatic revisions, therefore, could be traced back to the early part of the 20th century.

The knowledge that society conditions most of our responses, actions, attitudes, and emotional behavior, should be given serious consideration in an investigation and analysis of the changing image of the American woman. In Margaret Mead's study of primitive societies, we see that male and female do not necessarily assume roles because of maleness or femaleness. Cultural patterns have tended to make the requisite adjustments for both male and female. This is well-developed in the study of the Arapesh in New Guinea where men and women exhibited some similar characteristics. (Mead, 1963).

As the trend toward equal status between men and women in American culture persists, the cries of "unnatural" and the "demise of our culture" are heard occasionally from the barren depths of the voice of the traditionalist. We have seen that many societies have existed and flourished in which the roles of male and female, as viewed in Western culture, were reversed.

Plato foresaw the future perceptively when he said, "no occupation of social life belongs to woman, or man because he is a man, but capacities are equally distributed in the sexes, and woman should naturally bear her share in all occupations."

In the last fifty years, the physical changes in transportation, communication, and conveniences have been unprecedented. Revisions in attitudes toward life have also been observed. Increasingly, women have been outside the home because of economic necessity; the advancement in women's education; the elimination of domestic drudgery; the development of female talent; and the longevity of women.

Whether the idea of more involvement in the labor market appeals to all women or not, the status of women in our society is changing significantly. Those who deny the impending and ongoing changes are basing their conclusions on obsolete ideas of a previous generation. Others, who seek wider range of opportunities, suffer because avenues of self-expression and individual development supposedly open to them are still inaccessible.

Today almost half (49%) of all women 18 to 64 years of age are in the labor force. In 1920, less than one fourth (23%) of all women 20 to 64 years of age were in the labor force.

The reasons for the increase of women working outside the home have become much more complex than the primary economic one. More important, is the fact that it is now socially acceptable for a married woman to work. It no longer reflects upon the husband's ability to support a family.

Today's woman is in the process of "becoming," but the breakdown in outdated cultural concepts of the value of the female still needs revision for her to fully utilize the latent talents that she possesses.

In 1930, women held half of all professional and technical positions. Currently, they hold only one third of such jobs. In March, 1966, about one fifth of the working women who had completed four years of college were employed in clerical, sales, service jobs, or as factory operatives. Only eight per cent are represented as scientists, three per cent as lawyers, one per cent as engineers. Traditionally, women had a major role as teachers; yet, on faculties in institutions of higher education, they represent only 22 per cent today as compared to 28 per cent in 1940. Women comprised 55 per cent of all service workers in 1966 as compared with 40 per cent in 1940. (U.S. Department of Labor, 1967.)

In 1967, women earned 40 per cent of all Bachelor's degrees. At the Master's degree levels, women earned 35 per cent. They earned 12 per cent of all Doctor's degrees in 1967.

By 1965, the pay gap between men and women was wider than it was a generation earlier. On the average, women earned only 59 percent as much as their male counterparts in the same field. Of the 34 million women who worked at some time in 1965, 18 percent were widowed, divorced, or separated from their husbands. (U.S. Department of Labor, 1967.)

Statistically the compiled data indicates a grave situation pertaining to women. As compared to 25 years ago, the female appears to be in a disadvantaged position.

The concept of differential sex roles in our society has been a deterrent to the development of the full potential of the female.

In the postwar period, two American women won Nobel prizes. The National Academy of Science selected five women to membership. Newspaper women won five Pulitzer prizes. Women authors won thirty-eight more. As leaders in society, we can list women like Esther Peterson, Margaret Chase Smith, Maureen Neuberger, Clare Booth Luce, Oveta Culp Hobb, and many others in positions previously thought of as only for male occupancy.

In order to foresee any noticeable change, the learning processes from early childhood should permit and encourage the female to maintain the same equality as the male. Studies of primitive societies gives credence to the knowledge of cultural conditioning. It is, therefore, imperative that the individual be considered for his or her attributes, and that only this should be the basis of comparison, not maleness or femaleness.

The woman requires the same privileges as the man in seeking an education, working towards a career, marriage and parenthood. She also has the right, or should be permitted to enjoy the right, to remain single, childless, or single with an adopted child. In the past few years single men and women have been given the opportunity to adopt youngsters. The results have been quite satisfactory. The present ethic which implies parenthood is a necessary part of marriage is outmoded and of no relevance in today's overpopulated world.

We are presently in a period of re-examination. Perhaps with greater insight, a stronger commitment to the individual's right of choice will be formulated. Equality for women can only be achieved if there is a continuing effort on the part of our total society. To move forward, the following steps should be attempted and implemented:

1. Equal education opportunities for men and women. The only selectivity should be based upon intellectual ability and aspirational drive.

2. Women should be encouraged to attempt full intellectual development and to promote their leadership abilities in all phases of life and work.
3. Elimination of discriminatory practices in industry, business, and the professions so that women may assume an equal role in the so-called "male" positions.
4. Experimentation by industry in providing flexible scheduling for the greatest utilization of female talent. This may involve part-time, full-time, or a combination of patterns.
5. Young women need to be counseled regarding the alternative choices of life styles in our present society. This is of paramount importance in developing an understanding of the changing image of the American woman.

In addition to the need for general support in changing society's attitude towards women, the school counselor has certain responsibilities in counseling with girls.

At the Elementary Level:

1. Exploration of the world of work should be pursued without gearing the materials to female-oriented or male-oriented careers.
2. The role of the woman needs to be portrayed in a manner that permits the young girl to identify with the many life styles that may be available to her rather than the mother role portrayed in the texts.

At the Junior High and Senior High School Level:

1. A continuation of the analysis of self through group counseling is essential in preparing the young adolescent to perceive alternate choices in educational and career planning.
2. Beginning at the ninth grade level and continuing through the senior high school, the counselor should provide opportunities for personal contact with successful homemakers, career women, and women with varied life pursuits.

3. The counselor, as an agent of change and disseminator of current information, needs to place special emphasis on procuring data regarding changes in opportunities for females as she would in working with other disadvantaged groups. Materials are available from the Department of Labor, the Department of Commerce, Health, Education & Welfare, and the President's Commission on the Status of Women.
4. Of great importance is the development of a special Re-education Program for Parents. The research data regarding influence of parents in choice of occupations makes it imperative that group meetings be systematically scheduled to up-date parents on the new role for women in the years ahead.

This procedure implies a responsibility of active involvement on the part of the counselor in promoting greater equal acceptance of women in education, industry, and the professions. We can no longer permit this disadvantaged group to continue, in an era of affluency, without equal opportunity for self-fulfillment.

The role of the American woman will reflect not only the pressures of world economy, but the images we are capable of projecting into the larger social milieu. Each individual, male or female, black or white, can then ask himself how he may make the best possible contribution to the world and humanity. The social climate must permit this change if the image of women is to assume its dignity and purpose in life. Society and school counselors must now assume major responsibility in developing the necessary conditions for creative change.

CHEMICAL ENGINEERING TECHNOLOGY

John R. Hallman, Professor
Nashville State Technical Institute
Nashville, Tennessee

My name is John Hallman. I'm head of the Chemical Engineering Technology Department here at Nashville State Technical Institute. This morning I'd like to talk to you briefly about what we have in mind for our program here.

There are two types of programs in Chemical Technology. Both use equivalent programs but we have tried to distinguish ours as being Chemical Engineering Technology. In Chemical Technology, which you would find in our two sister schools at Memphis and at Chattanooga, the emphasis is primarily on the analytical side of chemistry, that is the analysis, testing and programs like that, and not on the engineering part. Our laboratory is essentially the same. We'll have one more laboratory here than the other two schools will have. Our chemistry laboratories will be identical, except that we'll have a little more room than they will. But the emphasis on the courses at first in the chemistry itself are alike. Where we differentiate is that our work will be primarily toward process orientation. By process I mean in the part of chemical industry where a young man or woman can direct their work in an engineering laboratory or pilot plant which is production on a small scale, or on the main production line itself, manufacturing some chemical.

In the oil industry our people could very well take their place in working as an engineer, or with an engineer, on the big catalytic crackers or any of the large units of instrumentation or other similar pieces of equipment that are in the process. Typically, these plants can occupy a half mile square area, such as those which make gasoline.

I know a couple of counselors; I have been visiting them. But I find that one of the questions that is of most concern is: What studies should a high school student take? Well, for Chemical Engineering Technology, my own preference would be that they have physics first, and not necessarily chemistry. Our course here is taught as if the students have never had chemistry before, and this eliminates some of the problems. Our emphasis is a little bit different, as you would expect, than the regular high school chemistry courses if they have the physics course where they learn a little bit about the metric system and some of measurements. Also, they learn something about the physical world about them, then I don't have to sit down and explain the difference between an inch and a centimeter. That takes time, and time is something that we don't have in our curriculum because of the amount of information that we are trying to make available to the student. We hope that they can comprehend and assimilate as much as possible.

As for math, I would like to see the students take just as much math as they can possibly get in high school. Now in freshman chemistry, algebra is probably the main subject that they learn; they become acquainted with logarithms; they become acquainted with decimal systems, also fractions and ratios. This is probably the first time they have seen a positive or practical illustration of the reasons for studying the mathematics. So that if a student is going into Chemical Engineering Technology, the more math the better. We have one feature here in our courses that they take one more quarter math than any of the other technologies, simply because there is a bit more calculus required in the engineering part. So far, the other technologies have not completely needed the advanced material.

I want to tell you something about these chairs. I noticed some of you remarking about how big those plates are. That chair was made to fit me--plus five inches. I tried several varieties. I wiggled in and measured the distance to be five inches between me and the chair. If you notice the plates on these, you can get a large book on them. Well, my experience has been that it's nice to have a book and a notebook and everything else, so I chose a large one. If they'd made them bigger, I'd have gotten it. But there's only two classrooms like this--physics and ours. You can lay open a notebook and a book and still have room for note writing. And if they'd made them yard size, I think I'd have bought those too.

Now, what do we do at MSTI? The program, the first year, is almost identical to that in the other technologies with one exception--we have chemistry. All students have the same math, the same physics, the same English, the same social studies, economics, human relations, and management systems; and all will take the same FORTRAN Scientific Programming. But where we differentiate again is in the first year. Chem E Techs have two quarters of general chemistry and one of analytical, in this case qualitative. In the second year, we have the additional math courses. We take a course in elementary thermodynamics. Now this scares everybody. And all this word means is that we're going to teach them a little bit about energy balances and a little bit about material balances.

It's the same type of system. If you can remember back to coal fire furnaces, every so often you had to replenish the locker with coal. Well, our fellows will be studying what happens in a furnace. They will have to account for all the coal thrown into the furnace, how much heat comes out, how much ash is left of the coal, and how much gas goes out the flue. Now this is a typical material balance. Energy wise you have to take account of how much energy was in the coal when you threw it in there, how much energy you get in the way of heating, how much energy goes up the stack, and how much comes out in the ash. There is some difference, but they learn to do this balance. One illustration is similar to driving your automobile. If you have a "gas robber" where you have one-inch lines going from the

gas tank to the carburetor and every time you look at the gage it sits on E, you're not getting very much efficiency. So the fellows will be able to make measurements on a car and find out the efficiency of its engine. Again, how much energy are we getting out of the mode of power versus how much you put in. Another thing is, how many gallons you put in for how many miles you get. The boys, again, learn how to use the practical systems and the required calculations. This is thermodynamics.

They will take two quarters of organic chemistry and a quarter of quantitative. Now quantitative chemistry is the one that requires the most work because it is the one which has to be performed in an exact manner. The grades are based primarily upon how accurate you are in your development of procedures. This is the thing that companies are very very explicit about, because depending upon the accuracy of measurements and the accuracy of calculations, the company is going to make a profit or have a loss. And a one percent error in one of the chemical analyses can mean several hundred thousand dollars a month. And companies get real upset when they lose \$100,000 per month.

Engineering wise, we're going to have a system known as a building block, an erector set, a tinker toy, or something of this nature, which is different from the regular schools that teach Chemical Engineering Technology. These latter have a system concerned with the study of one subunit. For instance, what I call a heat exchanger--this is merely an instrument which allows us to heat a fluid or cool a fluid by means of some other mechanism. You can either have a steam to heat it or cold water to cool it.

Well, our idea is not to study this thing by itself, but to take this whole system. What they're going to do is take different pieces of equipment and I'm going to give them a little plan and they will build a chemical plant. And, they're going to have to run it. This means that they're going to learn some plumbing and pipe-fitting. They're going to learn to use a transit to get horizontal lines, because . . . you know you don't like your pipes to curve; you like them straight. Ever look at the pipes in your house? You can tell a plumber by his trade. If the pipes are nice and straight, that means he knows something about threading pipe. But if you find where the pipes wiggle, that means that he didn't do a very good job. Something else we teach them, hopefully, in an all copper system, don't use steel nipples. And incidentally, I bet most of you have them installed. Now many of you have the copper system in your house? OK. The contractors have a nasty little habit of putting in a copper system, but that place between the copper tube and where your epigot turns on is a little steel piece called a nipple. And they can save themselves a lot of money to your detriment, because it takes about four years in the water here for that nipple to wear out.

Now this is something that we're trying to teach them. The practical application--don't mix metals. The practical application that they would find in the chemical plant because, let's face it, we are in a capitalistic system and as such, stockholders like to get some return on their money. If you could save a company a little bit of money, it may take a while, but there is some gratuity that comes back in the way of promotions and raises. So in all of this we're trying to give them an idea, using their ability to think and to use a little bit of common-sense. When in doubt, don't go back and read the directions. You've seen "When all else fails, read the directions" on a piece of equipment. Same thing. Only this time it's for real. Have you ever seen a chemical plant blow up? You lose sometimes several acres, maybe even a quarter of a square mile. And again, chemical companies get rather unhappy when their plant disappears. So do all the people in the plant at the time it disappears. So, another thing we try to emphasize is safety.

Now we have a couple of things around here which all the students come in and take a look at and ask what it is. And I say that's a safety shield. I've got a number of them here. If I'm doing an experiment that is dangerous and may emit some gases that are explosive, like hydrogen, I put three of these in front of the students and one which I work behind so I'm only risking hands instead of me.

Some of the fellows have already discovered that some of the gases we make are explosive, and I'm a little nervous around the explosives. And I'm trying to teach them also to be a little bit nervous about explosives. We have a rule that every chemical that they operate with is treated as if it's nitroglycerine; so that when you set it down on a table, you don't bounce it. You taste it and it may be cyanide and that's the last taste you'll ever make. Then again, it might be just common table salt. So when in doubt, DON'T. The other thing is you don't stick your nose in a bottle. Because when I see a young man doing like that, I give him a bottle of ammonia, concentrated. I guarantee that he'll never smell anything again--because when he gets up off the floor, he's going to walk around in a daze. Have you ever smelled ammonia? It makes your hair stand up. But concentrated it makes your hair stand up and then it falls over when you do. It is potent.

Now when we go to the laboratory, I'll show you some of the items that I'm trying to equate the young men with from my background in industry. In aerospace, when you're working with about 500 tons of liquid oxygen, and 500 tons of RP1, a type of gasoline, and you don't want to mix those two except in the rocket engine. We had an explosion one time when they were mixed, and it took 18 months before we found all the pieces. We rebuilt the complex again because it blew apart. It blew parts of our complex a quarter of a mile. And that's a long way when it's a five ton chunk of concrete. It also made the biggest boom that they've ever seen in Florida. They thought

they'd been bombed; looked just like an A-bomb. This is what we don't want. So again, safety is a big consideration.

Job Opportunities: The laboratory that I came from in Oklahoma called me this spring and said they had an opportunity for one of our Chem E Tech's next year to come and work at this laboratory and be on the staff of the University. His job would be to design and help the masters and PhD candidates build their research equipment. And if this young man would like the opportunity, we will provide the money and the time for him to go to the University of Oklahoma and get his Bachelor's degree in Chemical Engineering. It would take him about four years. There is an opportunity that may come once in a lifetime. I do have one young man in the curriculum that is interested in leaving the state.

We have one man on our Advisory Board who is partner in the company of Waste Water, Inc. It's an anti-pollution company who is sampling and developing anti-pollution devices and systems for chemical plants. One of our young men is employed half-time, and when he graduates next year he will have an opportunity to go into full-time service. We have letters from companies in Chicago and Alabama which said: "We think we like your program from what we have seen. May we send interviewers down to interview your students to work in the design and development area of chemical engineering equipment?" Right now in the state of Tennessee, there are no schools offering Chemical Engineering Technology. In fact, there is only one school in the entire Southeast and that's Southern Tech in Georgia. We don't have much competition; however, considering all of the present unemployment, chemical engineering technicians do have opportunities for employment because there are probably no more than 15 schools that are accredited and which train chemical engineering technology students. The others are all analytical chemists, which is fine; they are needed also. Last year in the state of Tennessee there were 278 jobs for Chem E Techs, but there weren't any Chem E Techs.

In talking to our friends at Tennessee Eastman in Kingsport last fall, they want to send a representative and also stated that they will hire the entire graduating class from this school for their plastics department. So there are opportunities.

Another asset is that Chem E Techs normally will go out from the school some \$50 per month greater in starting salary than the other technicians. One of the reasons is that it probably is the most difficult of all of the technology curricula.

It's six quarters of hard work. There's much homework and there's a great deal of study. One of the reasons is that in our freshman year we are actually studying both freshman and sophomore courses. In the second year of the three quarters, we are giving courses that seniors get at Vanderbilt. That's the difference.

We have so far in our program; it's all technology. There's no humanities, no history, no psychology, no physiology, no philosophy, nothing like that. It's all technology. This is a problem because if a student wishes to transfer, although we are not developing transfer credit, they do have some difficulty. For instance, the English we teach is toward technology, and not the literature type English. They study no literature. If a student should want to transfer, I feel that about 75% of our credits will be acceptable at any school around. The one area that he would be lacking would be in the humanities. We would have to take another course in English, courses of history, a course of literature, and whatever else would be in the first two years.

Now we have kind of a little working arrangement with Dr. Threadgill over at Vandy; he wants to bring some of his students over and use our equipment when we get it built, and we hope to take some of ours over there and let them work on his apparatus. There is quite a bit of difference of emphasis. Our people are laboratory oriented, being the practical side of chemical engineering. Where theirs will be the theoretical. We will actually have by next year a chemical engineering laboratory that will be far greater in extent than anything that they have at Vanderbilt. Deliberately so, because our people have to learn technology. They are not going to be the big designers; they don't have the background in math, the background in chemistry; but they do have the background that they can take the idea from the engineer and put it into a practical application, design it, build it, and operate it. And that's the difference.

All of the emphasis that we have in our Chemical Engineering Technology can be applied to pollution control. On the final test, I asked these fellows: "Now that you've taken this course in qualitative analysis, how would you apply it?" Every one of them said he'd go down to the Cumberland and find out what all's in it because this is what they have learned. They can take any stream coming from any plant and with the techniques they have learned in the lab, they can analyze it for what's in it.

Next year they're going to find out how much is in it. We have in our lab a special technique. The first thing we do is to go back to the old time chemistry where all was done by hand. Then (we had hoped to do it this year, but we haven't got the equipment yet) we're going to take him to the sophisticated equipment that a laboratory would normally have available to do this work. What took him three days to do to find out what was in it, we can do in one hour on one piece of equipment which you see over here. It is called a polarograph. It is our intent that in all of the courses of chemistry, seven of them, the students will do the old-fashioned method of learning technique and learn the mathematics that goes along with it. Then we give him the piece of equipment which shows him what the laboratory does today. We could go strictly to the laboratory or to this nice \$1,000 cabinet and teach him how to do it. I

could take a boy off the street who never went past tenth grade and tell him how to put the stuff in, turn it on, read the dials, write it down, and turn it in to somebody else. Or, they can learn the old-fashioned way and they know what that piece of equipment is doing for them. There's a lot of difference, and they're appreciating the fact that everybody may not have that nice piece of equipment in their laboratory.

Again, the emphasis is on practical engineering. Every laboratory that I've ever been acquainted with or worked with when I did my research and took my sample to be tested, all they did was say, "There's the equipment. You took chemistry; you run it." So this is what we're trying to do. These students are getting a strong background in chemistry to be able to analyze their own materials and know if they're right or wrong or if they've done something wrong. But primarily they will be out in a pilot plant (like we're going to be building over here) making chemicals in small amount. In industry, perhaps it's a 100 gallon per day unit.

Suppose a company is going to be making a new type of gasoline. Well, you can't go out and spend 30 billion dollars and build one square mile piece of plant, have it built, put it on the stream and it doesn't work. Because people get very unhappy with all that sitting out there not working. So before you go to that size, you build a small model that would fit in this room and you find out if you can actually do the process. Now maybe the chemist can do it in the laboratory in some glassware, but that doesn't mean you can make a plant out of it right from there. There's a middle stage. So this is what our fellow will be doing--the middle stage. Or they can go into a chemical plant such as we have at Stauffer, DuPont, and work on the line being in charge of a process, making one of the polymers. They would be the fellows between a craftsman - the one turning all the dials and switches - and the engineer who designed the particular unit of the piece of equipment. They're the ones going to be running processed or they can also be the ones doing the troubleshooting.

Chemical Engineering Technology is really Mechanical Engineering Technology with a lot of chemistry. Because instead of just air, steam, water, Freon of your refrigerants, a chemical engineering technician must be able to handle any kind of the two million chemicals that we've got wandering around the face of the earth--whether they are manmade or natural. And there are such things as sulfuric acid that has a very funny effect on pipes. Some pipes it doesn't attack, but some pipes it will. And if you make the mistake and you put the wrong pipe in there, you're not going to have any pipes very long, I assure you. So they must know how to handle chemicals.

Polyethylene is a great material. We use it . . . any plastic is a part of our life, but not every plastic is good for every application. Now some of these things in here are plastic (I think polystyrene). They're very good, but if I were to use certain solvents in here as a part of a demonstration and any of the fumes got into that light it would get saggy in the middle and fall right out because it dissolved. So, the application. We use plexiglas here mainly because people coming in are real funny. And elbows cut if you run them through glass. You could shatter this if you pushed hard enough, but it sure saves people. Plexiglas has a great many applications, but not all of them will work everywhere. So we try to teach them all the applications we can from a practical standpoint. We're going to try to get the students to where they can use this education as soon as possible to be an asset, not a liability.

INDUSTRIAL ENGINEERING TECHNOLOGY

Roscoe B. Shain, Jr., Assistant Professor
Nashville State Technical Institute
Nashville, Tennessee

I'd like to welcome you to Nashville State Technical Institute. I'm Roscoe Shain, and I teach in the Industrial Engineering Technology Department. We have one instructor and approximately twenty students at this time. We should double our enrollment next fall, and we will have another instructor July 1.

Is there anyone here that's familiar with Industrial Engineering in any way? Industrial engineering is a little different from most of the other disciplines in engineering. We're concerned more with the methods of operation of industrial plants. We get into personnel work, to plant layout in engineering new plants, and also alterations of existing plants that have to be reworked because of product changes. Industrial Engineering Technicians also work as safety technicians and time study technicians. I'm sure you've heard of the efficiency expert, the man who goes out with his stopwatch and makes a time study of an individual doing a particular operation, particular job, then sets a standard time for this job based on the average time it has taken the operator to do this job plus what the technician feels is a leveling factor which means nothing more than the efficiency with which the person is working. Of course, this information is used throughout the company for cost purposes and several other reasons. We also get into production control, production management, and also developing wage incentive programs.

As you see, we cover a large area. All of these areas are concerned with the efficient production of products to the most economic advantage. Most of the work for industrial engineering technicians in the past has been in the field of motion and time study, setting standards on jobs. Recently we have had opportunities for our industrial engineering technology students to go out and work in industry with one of the local companies here. The students were making a work sampling study. The company had some forklift operators who they were anticipating putting on a wage incentive plan, and they used the technicians to go out and make a work sampling study and observe what the operators of these forklifts did.

I have with us this morning one of our students, Bruce Vaughn, who is an Industrial Engineering Technology major. I think he would like to talk to you about this experience and how it relates to his course of study here.

REPORT ON WORK SAMPLING STUDY

Bruce Vaughn
Industrial Engineering Technology Major
Nashville State Technical Institute
Nashville, Tennessee

About a week before spring vacation the head of the IE department at Aladdin Industries contacted Mr. Shain and asked him to find some interested IE or ME majors who would like to work during spring break. I was one who worked and I would like to tell you about what I did and what I think about the experience.

The first day they took us to a conference room to tell us about the study that they were running. Aladdin, as you may know, mainly manufactures thermos bottles and lunch boxes and lunch trays for airlines. They make all their plastic parts; they make glass fillers for their thermos bottles. These parts are put together on an assembly line to get the finished product, and those assembly lines are fed by the line supply department which consists of several lift trucks which are in operation between the warehouse and the assembly line.

Aladdin had previously signed a contract with the union to work up an incentive pay system for the lift-truck operators. That is why we were hired. Each student was given a stopwatch and assigned an operator. Everyone was to follow his assigned operator and to write down each element of operation that he carried out and how long it took him to do the element.

What we have handed out to you is a far cry from what we ended up with. Each shift that we worked, we reported between 300 and 600 elements and times. At the end of the week we had recorded a tremendous amount of material, for about 40 different elements. We quite painstakingly tallied up all our data, breaking it up into different days and different elements. What we handed out to you is the finished product. Let me explain it to you.

The elements run across the top of each page. The first element you see listed says "WH2STGA". This means Traveling loaded from warehouse to staging area. The next one is "traveling loaded from warehouse to line 203." That's an assembly line. Several others are "traveling loaded from plastics to line #223", etc. The next set of data is the traveling empty elements. They run the same way as the traveling loaded.

The next set of data concerns the finding of materials to be delivered by the operator. This includes walking and looking for something to be delivered, riding on a lift truck and searching, and looking through records in the line office to find where something is stored.

The next set of data is the Miscellaneous Elements which is fairly self-explanatory. All numbers are totals for certain elements on a certain day. We also included totals and the percentage of total time

spent on each element. That's the percentage of the overall time that we recorded.

An element of a job: an operator is assigned to take so many parts to a certain line. An element would be part of that operation. He's doing one certain thing at that one time and we recorded the time it took him to do that one certain thing, like to load the lift truck, or it takes him so long to unload it, or it takes him so long to travel from one place to another.

On our last page we included a graphical representation of a comparison of each element--the main elements really. You can see that search is way up there. That's why we also included recommendations on how to improve this search problem.

Shuffling is raising the forks to get something out of a bin and then set it on the floor. He may have an empty pallet, and he'll stack some on the empty pallet. Not needing all he had stacked up, he'd put it back on the shelf. I'd call that shuffling. Or like making 2 or more different operations to load. It's a form of loading, except loading involves merely taking it out of the bin and carrying it. Shuffling also meant that when they were relocating goods in the warehouse, goods delivered--cups for the assembly later on. They had no need for those cups until later on so they stored them in a warehouse. They had no system for where they put it in. So what would happen--the forklift drivers when they were idle, were given the job of relocating these goods so they could maintain inventory cards so that for future use they could know exactly where that piece of equipment is.

This experience was just a chance for us to see what we would be doing when we get out of school and getting knowledge about industrial operations and getting experience in industry before we graduate and to broaden our knowledge, and learn quite a few new things. I really am happy that I worked there because I did learn a lot. Some--several of us have worked there since in a vacuum bottle operation where they were losing quite a few bottles. They couldn't account for them. They had an old process which had been in operation for about 22 years; they're accounting system was showing sometimes losses up to 20%. So they stationed some of us at different points of production to sit there and count the bottles and to count the scrap thrown away and make a few other observations. That was another time we worked there, and I hope we get to go back again.

REPORT ON WORK SAMPLING STUDY

Edward S. Kovach
Industrial Engineering Technology Major
Nashville State Technical Institute
Nashville, Tennessee

Thank you Mr. Shain. I would like to tell you my ideas about the NSTI courses that I have taken. First of all, why did I select NSTI? Well, initially I had thought about attending a vocational school or college, but the state vocational school had a long waiting list and waiting period. Consequently I had to do something besides lying around. I then talked to Miss Rich at NSTI and she administered the NSTI diagnostic tests to me. The tests proved how stupid I really was. As Mr. Shain pointed out, practical experience is good (which I have), but what industry really wants is an individual with technical training. I, too, found this out when I looked for employment upon my retirement from the military; industry wants somebody with a little technical know-how.

I am a high school dropout and lack technical training. So, there are several reasons why I came to NSTI. One, I couldn't get into the vocational school; and two, the tuition at NSTI is nominal. I attend NSTI as an in-state resident for \$55 per quarter. I can take as many hours as I like during day and/or evening classes. For an out-of-state student the tuition is \$135 for a quarter if I am not mistaken, which again is very reasonable for an individual who desires a higher form of education. The third reason I came to NSTI is that I only live about two miles from the school. There are many students going to school at NSTI who work. Fortunately, I don't have to work because of retirement and G.I. Bill benefits. However, it has been such a long time since I have attended any school that it takes me more time and effort to apply myself to learn the different subject material in my desired field.

Now then, something about the industrial engineering course. After talking to counselors, both vocational and high school, I found out a few things. For instance, my son's high school counselor could not or did not assist my son in any way; yet, my son received a four-year scholarship through his own efforts and application. I may be hitting a sore spot. Most counselors I have talked to as a prospective student or formally as an army recruiter don't know how to counsel a student. What I mean is that they don't readily have facts and figures and usually can't or don't advise the student what he should do based upon his achievements. My experience has been that the counselor could not cite a specific incident or when and where to apply for a scholarship. Also, I don't think taking a diagnostic test really helps a student. For example, when I talked to Miss Rich, I didn't know what I really wanted. I knew when I took the diagnostic that I would bomb it--which I did. Miss Rich then referred me to Mr. Moore at the school who further counseled me. I finally ended up with Mr. Shain who aided me in my decision of selecting Industrial Engineering Technology.

I think counseling does not stop with the counselor; I think it has a feedback with the department head. Thus, the individual can be shown and receive explanation of what the department has to offer. This type of counseling gives the student a better picture and helps him make the right choice. I think counselors should be better prepared on statistics in different technologies and should have names and addresses where a student can apply for scholarships, especially at high school level.

As for the Industrial Engineering curriculum, I found out that I had a poor background in math. As I stated earlier, I am a drop-out; and although I have had numerous and varied jobs in the military, I was never required to know any advanced math. My math results were pathetic on the NSTI diagnostic. I did not even know what the dot symbol represented nor the parentheses, brackets, or braces. I had to take the NSTI Math 10 review course when I enrolled. This course consisted of two programmed texts which helped me. The review course is five hours, one hour each day, which helps individuals like myself. Many kids fresh out of high school try to take advanced courses and usually flunk out. Also, being educators, you know that the state institutions must take first quarter students regardless of their ACT scores. At NSTI any individual can attend but he must take the diagnostic for placement dependent on his demonstrated ability. I think you get more attention at this type of institution than you would if you were attending some other junior college or university. In our drawing class last quarter there were only nine students. This gives the instructor time to circulate and help the student on an individual basis. The instructor can evaluate the student's ability plus help him if the student is having difficulty. The same thing applied in my math class which had fifteen students. Here again, the instructor had ample time to help the slow student and show him where he is making mistakes. I don't think this type of instruction takes place in colleges or universities. I was an ROTC instructor at North Carolina State College for three years and an army instructor at Fort Benning for two years and never had enough time to help students on an individual basis. At Fort Benning we also had closed circuit TV for instruction without the benefit of individual attention. I call NSTI a super high school because of the advanced subjects, small classes, and the individual attention the student receives.

I felt by attending NSTI I could bone up on my math, which background is a must when you are looking for a good job. I know I won't be a math whiz, but I will have a better working knowledge of it. I will also have a knowledge of engineering drawing, and will be able to converse intelligently with production managers and supervisors with the aid of my English courses. I hope to get a job as a supervisor based on my personal experience and the textbook theory I learn at NSTI. I'll be able to go and seek a job with confidence once I complete my studies here. I have been talking all day--do you have any questions you would like to ask me?

STUDENT SERVICES

Dorothy M. Rich, Counselor
Nashville State Technical Institute
Nashville, Tennessee

I am sorry to have missed the meeting at the Andrew Jackson Tennessee against Tennessee Education Vocational Counselors meeting. We had one of our teachers here elected vice-president, Mrs. Margaret Wares. I don't know if any of you know her or not. I feel very much at home with Metro teachers, counselors, and the rest of you.

I started out teaching from a formal school at Tennessee, Vanderbilt. From Long Island there I went to Highland Heights and then to North Ireland. I have been away from Nashville off and on. My last teaching was ninth grade English at Franklin High School in the early part of 1969. My counseling of course at Tennessee Tech. I have done counseling at Junior High and last year at Manchester. I came out here last June 15. It has been about one year. The first thing I did was to interview these students, as Mr. Kovach mentioned. I refer them to their departments and first find out where they stand. I always let them talk to someone in the department of their interested field so that they may get first hand information. Most of the counseling situations have been with people who thought it wasn't going to be as difficult maybe as it is. People that haven't had enough math, also. I have talked with them quite a bit. Some have found out maybe this wasn't their place. We tried to find a place for them. Most of the students here work full-time or part-time.

WORK, CAREER DEVELOPMENT AND ATTITUDES

Joseph M. Cozy, Ph.D.
 Assistant Professor
 University of Tennessee
 Nashville, Tennessee

I would like to share with you a few ideas on the subject of attitudes related to work and career development. I have directed my thinking in this matter particularly toward our function as school counselors.

Permit me to start by making some statements you have already heard. When we are talking about work, we are talking about two major dimensions of human life. We are talking about work as a social phenomenon which can only be understood as it exists in a given culture and in terms of the social institutions of that culture. The church, the educational system, industry, political structures, legal structures, all of these, and more, make up the fabric of a society. In the final analysis, however, when we, as counselors, discuss the topic of work, let us emphasize that work is performed by individual persons, not by society. Individuals, no matter what society they live in, everywhere and always must at some time come to terms with a demand to work. The way individuals meet this demand is a problem of individual psychology.

Human work, then, must involve, on our part as counselors, an understanding of the conditions which influence a person's choice of a career, a vocation, a job. Our function as a result is not simply a social and historical concern, but it is at root a highly personal and individual one. We as counselors at this point in our relationship with students take on a special relevancy for the schools in which we work. In one sense it is in large part one justification for our being in the school as guidance people. Our function, in this respect, becomes much more than adequate information-giving service. Adequate information is essential and we must know what we are talking about or at least where to find the appropriate information. But, on a deeper level, when a counselee says, "Mr. Guidance Man (or, Miss Guidance Lady), I don't know what I want to do," or "I can't seem to decide about work," information is not enough. In effect, what the counselee is saying implies one of the most fundamental questions each one of us had to ask, and maybe are still asking, about ourselves. That is, what do I do with my life; what meaning shall I give to it? The most precious commodity we have is our personal lives. And, every counselee, even when he comes in to ask information about jobs, careers, college, or whatever it is - is asking, "Help me, what do I do with my life?" If we think about that for a moment, we will and ought to feel some reaction in the pit of our stomachs for we ought to be recognizing the tremendous responsibility we take on as guidance people. We are entering another person's life with a certain amount of potential influence. What do I do with my life? This comes close to dealing with the meaning of a human being, his needs, his hopes, his fears, his doubts. We are entering into this student's cognitive and emotional perception of his private world as he confronts the world around him.

This brings us to the subject of attitudes. We, counselors, are dealing with much more than a rational process and an information oriented relationship. We are dealing with the whole, often confusing, complex of attitudes that a student brings into our office.

Perhaps, at this point, a working definition of an attitude with which we are probably familiar will be useful. Let me refresh your memory. An attitude may be viewed as a learned, emotionally-toned, predisposition to react in a consistent way, favorably or unfavorably, toward persons, objects, situations, and ideas. So, it is a consistent way of reacting in terms of what a person has learned. But, the important factor is that it is emotionally toned. There is a set of feelings associated with the reaction when a person confronts another person or situation - liking or disliking, hostile or pleasant.

From attitude research two important notions emerge about attitudes. First, all the actions of individuals are governed to a large extent by the attitudes they have learned. Second, an attitude has three components. Bear with me in this bit of preaching. The first component is the cognitive component. This is where we counselors are concerned with accurate information giving. Second, the affective component, the associated feelings the counselee has toward the information he is getting related to persons, objects, and ideas. And, the third component is the action-tendency component. Every attitude involves some tendency to act out the information and associated feelings with respect to the object of the attitude.

Finally, on attitudes, it will be helpful to keep in mind an attitude is rarely an isolated condition of a person. We all carry around a whole complex of attitudes. Our religious attitude affects our social attitudes and behavior. It affects our work attitude, it affects the kinds of friends we make, the kinds of social relationships we establish. It determines in large measure the kinds of responses we are going to use in social situations. Rarely, then is an attitude an isolated factor you will be concerned with. Most often, it will be relative.

This description of the meaning of attitudes is hopefully something you will take back to your work. Perhaps, when you enter upon a counseling relationship, the description will cause you to pause for a moment to think about who is walking into our office no matter what topics are being discussed, whether skills, statistics, economics, social aspects of work, or job, or profession.

Whatever it is, work is a functional, practical, and essential part of the person in our society. There is no way, except by the most radical decision, a person can avoid coming to terms with the demand that he or she must work. Work in our society is pretty much specified in terms of jobs, kinds of skills involved. In most instances, work is fairly clearly delineated. It differs from leisure, from love, and from play in that it demands rather specific performances and has specific rules of behavior connected with it. One cannot work in a factory, business or profession without quickly becoming aware of the behavioral constraints one's job or profession places upon one. Students have to learn this. We all have to learn this.

Work in our society can be described in terms of occupations, jobs, careers, etc., but we counselors must keep in mind that there are factors over and above descriptions which influence both work-choice and work-behavior. Human work is an extremely intricate personal affair. So, we must be cautious of oversimplification.

To illustrate the need for caution and to emphasize the human aspect of our work as counselors, permit me to refer to a bit of classical research. I think you are all familiar with it but perhaps it will serve a useful purpose in support of what we are discussing.

The research is the famous Hawthorne Study (1924). It is a fascinating study - even humorous - as a scientific discovery of the complexity of humans at work. In the end, it was what the study did not set out to observe that proved most important. Let me refresh your memory about some of the details.

The study, set up in a standard scientific way, set out to investigate a wide-range of conditions such as lighting, rest periods, length of working periods, pay rates, number of breaks, hot lunches and so on, which it was assumed would affect work productivity. How would making these factors, favorable or unfavorable, affect the workers behavior in terms of production?

The unexpected result was no matter how the experimenters varied the factors such as lighting, hot lunches, etc., productivity continued to rise -- whether working conditions improved or got worse. And herein lies the tale.

Being honest researchers the experimenters discovered an explanation other than the one implied by their assumption. They discovered that they had made participation in this experiment attractive to the workers. The participants got a lot of personal attention. The experimenters talked to them. The workers were allowed to work in smaller groups, had communication with each other rather freely, and so on. The value of the unexpected discovery is that it showed, while the factors investigated may be important, attitudes and the human condition are even more important. So now we know that worker attitude and morale are more effective determinants of production in a work force than most of the physical work conditions we hear so much about.

Well, so what for us counselors. Whatever the counseling situation, whether concerned with decision-making about career, occupation, academics, social or economic situations, we are in the end counseling a person who is in search of meaning and self-esteem. We are counseling in terms of the attitudes and highly individualized perceptions of this person. If we really believe this we aren't so readily going to say, for example, "Look, according to test results, you can't go to college," or "You want to be a mechanic? Don't. You have too much ability." These kinds of things we have all heard. And, perhaps, if we have said similar things, they have probably come back to haunt us. Most of who have been counselors for a while know of instances where a former counsellee has come back to say something like this: "Hey, remember me? You told me I wasn't too bright and I should not go to college. Well, I just got my Master's degree."

Now, I am going to violate an earlier precaution about oversimplification. I am going to suggest for your consideration that relevant to career choice, we can observe certain types of attitudes toward work. If we, through counseling, can get a pretty sound picture of an individual counselee with a dominance of some of these attitudes, we may better help him explore his work and career goals. There are certain types of attitudes that emerge over the long range in our school counseling. I mention these now so that we might discuss them later.

Let me outline them briefly.* First, there are those students who appear to have a major lack of motivation. They manifest a negative attitude toward the work role. Here they are and this is their attitude. Why work? You work for somebody, and they get the money. Work is for "squares." Stealing is easier. These are attitudes and responses. But, then we meet with a more difficult type of person who is indifferent about work. I don't care, why do it? The general indifference to any kind of work role in society is a most difficult counseling situation. In this case, rather than confront the counselee with some kind of moralizing, I would suggest that we think of this person in his view of the work. Work, as he sees it, does not serve any vital needs of his personality. Here I suggest we can be a little more sensitive to the possibility that the counselee is more likely more concerned with immediate gratification than with the potential rewards of delayed gratification. Getting something now not tomorrow, is the attitude we are more likely to be concerned with.

There is a story about some Indians in the Southwest. A sawmill was built to give the Indians work. The Indians went to work and thought it was great. They were getting paid. They worked from five to ten days. The foreman came one morning and nobody came to work. What happened? Well, the Indians got enough money to do what they wanted to do and they didn't think it was worth coming to work anymore - until they needed more money.

The second attitude is represented by the student whose dominant response to a demand to be a productive work-member, whether it is a profession or job or whatever, is one of manifest fear and anxiety. Now, fear doesn't manifest itself like a sledgehammer, nor does anxiety. It is more subtle, especially when the counselee doesn't, understandably, want to reveal his fears. It will come indirectly to the surface. I counseled with a young man at the University of Wisconsin. He was the so-called "hippie" type, with the beard, long hair, dirty clothes, etc. He was involved in just about every protest that came along. We talked and then I lost track of him. About a year later he came in, a senior about to graduate. He sat down and said: "I want to talk about a 'real' problem. I have to go to work and I am scared to death. I don't know what to do. I don't know how to go out into the world and work." Now, a year earlier, I wouldn't have thought he had any fear or anxiety about work. But, I suspect it was there all the time. He knew deep down the direction he had to go. So, in these cases, we may suspect the person very likely has in fact internalized - made his own - the demands of society. And it has been done in an intense way, whether through parents, teachers, or whoever. Unfortunately, such a person has also learned to believe he cannot meet the

*Adapted from Walter Neff's Work and Human Behavior, Atherton Press. New York: 1968.

standards of a productive person. What we are working with as counselors is the perception and attitude of a person who without clearly describing it feels incapable, non-confident, perhaps even impotent: a poor and self-image. Work is a severe threat to his already inadequate self-esteem. We know he has to do it, but he feels he can't do it. Thus, the fear and anxiety. The attitude is our concern, and not immediately job-selection.

The third typical attitude is one where the student is characterized by a predominant open hostility and aggressiveness. We have all met him or her. Open hostility and aggressiveness doesn't necessarily mean the person is on the verge of physical violence. Open hostility and aggression can come subtly in the form of passive resistance. This form of hostility can be a severe threat to the counselor - especially when the response to the counselor's best effort is a deadly shrug of the shoulders or a cryptic, "I don't know." The counselor says, warmly, "What do you want to do?" The response is, "I don't know." "Well, would you like to be a mailman?" "I don't care." That response really hurts us - our ego, that is. Here we sit, with our fund of wisdom and concern, and the student doesn't care. That may be counselee-hostility - but it is not toward us personally. Rarely, toward us personally. It might be helpful to know that these students most often can make career choices. It is important to note this in the case of hostility. Most likely these persons will get jobs. The problem by reason of their hostility will more than likely be - keeping a job. The student with this predominant characteristic or attitude will have to fit into an organization which the social process of give-and-take will be necessary. This student, long before he enters the world of work needs our help in learning how to cope with his feelings - how to find alternative ways of behaving other than hostility. For, his or her problem will probably be in maintaining a job. They will be, in probability, "trouble-maker," "unable to get along with others." So, when we have a suspicion, I am sure we do not come out and say, "Look, you're impossible - here's what's going to happen to you." We might be more effective if we assist the student to explore some of these feelings of hostility and aggression. What is it that keeps him from making friends and being sociable? We are dealing with an attitude first, and then career choice. We are dealing with the person not in terms of a task to be performed but in terms of himself as a human being who will be going to work.

The fourth attitude is noticed in students characterized by marked dependence. This is one we frequently meet. Having learned their reactions in a context perhaps of overly rigid, dominating parents or other adult figures, they tend to become overly compliant. "Yes ma'am, no ma'am. Yes, sir." If the counselor says, "Would you like to be a mailman. How do I go about being a mailman?" Overly compliant. This may be a tough situation for the counselor, especially because we, as counselors, do not want to act in authoritarian roles. But, for the student with this attitude, an authority's approval is a dominating motivation. You can expect he will react more for someone else's approval rather than for a personal value placed on what he is doing. Such students are now, and likely to be so in the world of work, highly dependent individuals. They tend to function adequately only under close supervision. Independent activity is a threatening demand, and serious difficulty may be expected when they are put into this type of situation. If you stop and think about the world of work, even though it is structured, even though it is supervised, there are still broad areas of operation in which one will have to command one's own actions.

In spite of the number of dependent students perhaps the most frequent attitude we, counselors, will recognize is in the student who displays a marked degree of naiveté. He is just ignorant. Not in any kind of value sense, he just doesn't know. There is little or no understanding on the part of the student about the world of work; no perception of himself as a productive worker. There is little or no knowledge of the demands of reality that he is going to be faced with in different work environments. For example, very few people go into the world of work today as an independent enterprise. The little independent grocery store is practically gone. We are more likely to work for large organizations. We function, like it or not, within organizational categories and definitions, and we have to learn to work under such conditions. This is not necessarily a bad thing, but the type of student under discussion at the moment is naive about it. So, here we are dealing with ignorance, not hostility, resistance, or indifference.

In this type of situation, with this kind of counsellee, information-giving techniques are simply not enough. Values, attitudes, social esteem, economics, skills, kinds and length of preparation, sense of responsibility - all these variables are what we have to help the counsellee learn. In such instances whenever we can provide vicarious or direct work experiences, we should help the counsellee to use them in order to experience what it is doing to be like.

Perhaps, we have all heard before what I have been discussing, but perhaps we need to spell it out for ourselves. Each one of us can look into our own experience as counselors and probably recognize individuals predominantly characterized by one or more of these attitudes. Were we aware of the more fundamental human dynamics when that individual came to see us? Were we aware that the student was working out his needs; that hostility, aggression, indifference, dependence on attitudes with which the person was seeking to be somebody?

Our emphasis as counselors, it seems to me, in this whole business of career development, occupational choice - or whatever, is the individual person as he is here and now. When he walks in and sits down with us, a myriad of influences are working on him. But we have him here and now, and in a sense he is ours and we enter his world. This is our total responsibility at the moment. The records, the files, the principal fade into the background. It is this person and his life that matters. If that is not an ethical concern, I don't know what is. But, if we are going to say, "Just a minute, Louis, we will take care of you just as soon as we get these papers put away," or "Here are a couple of pamphlets, Louis, just shoot through them and find what you need," we have just failed as counselors. Ours is not task orientation in counseling about career development. It is not getting a job for someone. Any list of priorities in terms of work selection tells us as much. The University of Michigan in a recent study shows how consistently people list "money" rather low. Personal satisfaction, social relationships, self-esteem, recognition all rank high on what people are looking for in job selection. Research keeps pointing this out to us. It is up to us to be mindful of it. Work is more than a task. It is a personal enterprise to which the complex organism called a "person" brings all that he has.

Finally, just a few points we might consider for further discussion. What about our bright and very bright students? As counselors, one of the problems that we might discuss is their difficulty, sometimes, in making personal career decisions. They frequently, are ambivalent because they can do so many things well, and because they are often under rather intense parental pressure. Underneath all of this, I suspect there is a kind of attitude-value playing an influential role. That is, perseverance, consistency is a virtue. Young people ought to decide on a career, and having decided must stick to it - no matter how they feel. No wonder we encounter hesitation to make a career commitment. I think we need to help our students deal with the virtue of consistency and the virtue of change. How many jobs are changed in one's life? Perhaps, we can alleviate some of this kind of pressure on our young men and women through our counseling.

Our job is to help them explore and come to their own decisions and to live with the consequences of their choices. We are in the end working for the full autonomy of each of our counselees - his sense of free choice and decision. So, perhaps, our function is to facilitate self-exploration, flexible decisions, and general choices so that as the process of living goes on, the person, himself, can specify decisions and choices to his own satisfaction.

MECHANICAL ENGINEERING TECHNOLOGY

Roland E. White, Assistant Professor
Nashville State Technical Institute
Nashville, Tennessee

Welcome. I am glad to see so many counselors attending this seminar, and I am especially glad to have this opportunity to tell you what Nashville State Technical Institute has to offer the high school graduate. Of course, as you have already discovered, we offer a program which is compatible in every way feasible with the needs of the full-time student, working student, part-time student, veterans, community and business with special training sessions such as the one you are attending here this week.

One area of interest you might have is in knowing the type of student the Mechanical Engineering Technology program is geared to. Our program is geared to a large percent of students with average intelligence. It is geared to students with an intelligence and creative drive which exceeds that of the tradesman, but which is not really such as to guarantee success at a four-year college. This is not just intelligence I am referring to, but the basic nature of the student--how he thinks, what he feels to be important, or his goals in life. Most of these students are not theoretically oriented. Before they are willing to study something, they want to see some reason or practical use in doing so. They are not interested in learning just for the sake of learning. They are not highly motivated to read a text and to turn out a great deal of paper work; they prefer something tangible such as is found in our laboratory experiments.

Our program emphasizes an applied type approach as opposed to a primarily theoretical or textbook approach. We cover theory, but also go into the laboratory to actually see the applications of the theory and to get an idea of what is involved. This technique of teaching makes the information stick and greatly increases the student's understanding and interest. It is fairly common to see a student's face light up during lab with a sudden comment of "so that is how it works" or "I can see it now."

Our school offers a great deal in course content. We cover a high percentage of the four-year engineering curriculum in the number of areas of engineering studies. We do not go as deep into the theory as the four-year program does, but we do expose our students to more equipment, test procedures, and hardware than many do. As a result, our student can jump into setting up tests and using equipment with much more ease and familiarity than many engineering graduates. By the time our students graduate, they should be well aware of the equipment and hardware on the market, how to use it, and how to take data. We are able to do this in two years by omitting history and other nontechnical courses (which most of our students show little interest in anyway.) Of course, these courses do have their place in educational programs, but we just cannot crowd everything into two years. We are forced to be selective with our specific goals in mind.

We cover the basics during the first year. These include the following:

Math -- the most important engineering building block.

Physics -- a brief introduction to the topics to be covered in detail later.

English -- teaching students to express themselves in writing and verbally so they can communicate their ideas.

Economics, management, and human relations are also taught during the first year.

The second year is almost entirely engineering. Here they are introduced to the areas of drawing, static loads on bodies, dynamics of moving parts, strength of materials, manufacturing and production processes, hydraulics and pneumatics, heat transfer, metallurgy, and machine design.

All this ends in a senior research project in which each student gets an opportunity to apply what he has learned. There are twelve courses which have labs. This means there are approximately 130 lab experiments in Mechanical Engineering Technology alone. You can imagine the amount of equipment each student learns to use. In lab they study such things as heat treating of tool steel, strengths of different metals, bending of beams, velocity of moving parts, power transmission, heat exchangers, and control devices -- just to name a few.

The following may be indications of potential students: ability in math, inquisitive mind (Why does something work like it does?), willingness to stick with a job, interest in machinery, creative and analytical ability, perception of how things relate to something else and fit together, working on cars may be an indicator but not necessarily (They need more than just an interest in fixing something. They need the ability to attach a problem, figure out how to go about finding it and solving it).

Mechanical Engineering Technology is nothing like automotive repair only; it is much more comprehensive and demanding. It is a much broader field than this and requires a knowledge in many areas.

The next area of interest is what will be the Mechanical Engineering Technologist's bag? (i.e. What will he be doing?) His main function will be that of a technician. He will be running tests, not only pushing the buttons, but also figuring out what equipment to use to obtain the desired information. He will hook up the equipment, run the test, record the data, and in some cases analyze the data and come up with a conclusion.

The Mechanical Engineering Technologist may also be an engineering aid. An engineering aid helps with calculating, collecting or compiling information, running tests, etc. He may also be a machine

designer or be involved with sales. Machine designing would include trouble shooting and making modifications to equipment. When selling equipment, one needs to understand what the equipment will do and how it works. He also needs to be able to speak the language of the engineers to which he is trying to sell his equipment. The areas which he can enter are almost unlimited. The Mechanical Engineering Technician is the most widely needed. Where you have equipment and manufacturing plants, you will find a need for the mechanical technician.

The salary for a mechanical technician equals that of the other technicians--\$600 per month.

Any questions?

PRETECHNICAL AND RELATED STUDIES

Daniel J. Raiber
 Head of Pretechnical and Related Studies
 Nashville State Technical Institute
 Nashville, Tennessee

I would like to announce that this part of the program is brought to you by the Related Studies Division. My name is Dan Raiber and I am the Head of the Related Studies Division. In short, this is the academic division where we teach such courses as physics, math, English, accounting, and so forth. In the last few days you have seen what the different technology programs are all about, the types of equipment they have, the programs that are offered, probably the type of job that the student would go into after graduating. The purpose of the Related Studies Division is to prepare the student with the skills so he can succeed in his technologies program, and also to prepare him with the skills so that when he is out on a job he can do a good job. Just as in a junior college or even a four-year college, the Related Studies Division rounds out the student's education. In essence we are a two-year college--a two-year college that prepares a person to go directly into a job.

To illustrate the rounding out of the curriculum--each student takes one complete year of English, and each student takes a complete year of math. The Data Processing students take a complete year of accounting whereas, the Engineering Technology students take a complete year of physics. So if you compare our first year with the first year in a college, it is pretty similar. The point that I am trying to emphasize is that when you think of Nashville Tech, think of us actually as a two-year college. So if Johnny's father says Johnny has got to go to college, do not forget Nashville Tech--we fit that category. We teach college-level work. Incidentally, we are very proud of the fact that in Related Studies over twenty percent of our instructors have a Ph.D. This is surprising to us probably as well as it is surprising to you. The instructors in the Related Studies Division are a pretty sharp group of people.

Another question you might have is what kind of student will succeed at Nashville Tech. We have had a year of operation and we are beginning to see what items are good predictors of a student's success. I think a score of 16 or so on the ACT is about the minimum for a good indicator of success. Not that students with a lower score will not succeed, but the chances of succeeding are not very good. A student should have at least one year of math. Now if he has only one year of math he is in a marginal situation. If he had a good one year of math, his chances might be fair. He will get a lot of math here and we move reasonably fast. I would recommend to your students that they have at least two years; four years would not hurt. Also as with college, the student that

has the intestinal fortitude to grind out a heavy class in physics or math is the kind of student that we find will succeed here. I am not trying to give the impression that we are a very difficult school, but by the same token we are not a very easy school either. Students that are willing to try and try hard will generally succeed. They should have a reasonably amount of smarts to begin with.

For students that come here academically disadvantaged, we have some programs where we are trying to give them as much help as we can. Before a student starts any of his classes, we give the student a complete battery of diagnostic tests. Just to show that we have them I am holding them up. One is in reading, one is in English, and one is in mathematics. The purpose of these tests is not to decide whether or not he comes here, but to indicate in which areas he needs help. For each area in the test that the student appears weak, we have appropriate materials that help him in the regular classwork and outside of his regular classwork. So we are trying to diagnose the particular areas in which a student has weaknesses and do something about it. For some students who really need a lot of help we have special pretechnical courses. These are not for credit. They are at a level somewhere between high school and college, and their chief purpose is to bring students up to a level where they can begin college level work. We have pretech courses in reading, English, mathematics, and physics. So if you have a student who is fairly weak and it is questionable as to whether he could succeed here; send him out. We probably do more to help the weak student than any other four year or two year college in Tennessee. We are certainly competitive in that respect. We are trying very hard. One program that we are undertaking, also, is to use a computer to help the students learn. Apparently there is a very good interaction between a computer helping a student and a student responding to a computer. Studies have shown, particularly for the disadvantaged student, that the computer interface with the student is a very good one for getting him to overcome certain deficiencies.

Well, I have talked enough about summarizing the Related Studies Division. The next speakers on the show are all from the division. They will tell you about their specific areas. One last thing that I also want you to note is that all the Related Studies courses try to stress relevance to the particular Technology. We don't teach physics just because we have to teach physics. We try to relate physics to the particular technology that the students are taking. The same in English, the same in reading, the same in all the courses. The frosting on the cake is one which shows relevance to the particular technologies. With that in mind, the first speaker is Mrs. Wares who is in charge of our reading program. She has a very short film for you that she will tell you about.

REMEDIAL READING

Mrs. Margaret Wares
Remedial Reading Specialist
Nashville State Technical Institute
Nashville, Tennessee

Good morning. While I was trying to get the projector threaded and set up, I missed hearing the introduction, and I do not know if Dan told you my name. I am Margaret Wares, and I am a Remedial Reading Specialist here at Nashville Tech. We have prepared a seven-minute film, "Modern Approach to Reading," that I think will explain to you as quickly as possible what the purpose, the idea--the whole idea of the reading program is. I would like for you to watch the film and then when you finish, I will answer any questions that you have. Thank you very much. (At this point, "Modern Approach to Reading" was presented.)

From watching the film, I do hope that you got some idea of the unique approach that we have in helping the student overcome his reading disability. We treat each student as an individual. We teach classes of one whether there are twenty-five students in the class or whether there are seventy. By using the computer, we manage to teach our students on an one-to-one basis. At no time in our reading laboratory are there two students doing the same thing at the same time. We are only able to accomplish this because the computer matches students with materials--not just comprehension materials but also his phonetic disabilities. The student does not understand, for example, division of words. We have a phonics series here that is almost completed, and the computer can tell us "this student needs help in this area" and we teach him and work with him.

It is not necessary for this type of program to have a computer. To handle the volume of students we do, yes, it was necessary to use the computer. But under ordinary circumstances, in ordinary situations, individualization can be accomplished by a classroom teacher.

PRETECHNICAL AND REMEDIAL ENGLISH

Miss Martha Heneger
Head, Public Relations
Nashville State Technical Institute
Nashville, Tennessee

We're not training people for a job. We're training people to move up, or across. They must be able to communicate--to talk to supervisors and managers and to craftsmen. We impress people as we speak, not just with our voices, but all of ourselves.

Speech training is being revolutionized today:

1. Told the student how he sounds and looks.
2. Student could hear how he sounds, but we still had to tell him how he looks.
3. Now: He can hear and see for himself!

We use VTR (Videotape Recording) in speech so the student can be his own critic. He sees what he is doing right and what he is doing wrong. To illustrate how it works, I'll ask Mr. Poole to tape while I give a "little speech".

One career possibility for trained technicians is that of technical writer--writing technical reports, writing articles for industrial house organs, writing ads for company products, writing reports to stockholders, writing for the company newsletter or magazine, writing speeches for the boss to make at the Lion's Club. Not all of our graduates will become technical writers though most will at least write technical reports. A technical writer must have not only technical knowledge but the ability to write as well.

At Nashville Tech students who do have the ability and the desire to write have the opportunity to do so for our "house organ", a monthly magazine called Print-Out. This is Print-Out. We'll be giving you copies to take with you as you end this seminar tomorrow. (O.K., Mr. Poole, if you'll rewind that.)

Most Print-Out articles are written by students. Virtually all of the pix are made and processed by students. This is true too for the Institute yearbook called the Lay-Out. Students take the pictures and write the copy. After the layout for these publications is made showing where copy and pix go, our composing room veritypes the copy and makes a finished layout. This is photographed and a plate is made which is put on the offset press. After copies are run they are trimmed, collated, folded and stapled, all automatically. This whole process is done in our print shop which also prints the bulletin, test materials, brochures, business forms and other printing needs. The whole process is explained in the February issue which you will receive.

Now, back to speech class. The other day in the library, two of you became instant TV stars by staging a counseling interview. Did you notice that everyone watched the playback as attentively, if not more so, than the live performance? This happens in speech class too. No one seems to get bored by hearing each speech twice.

PRETECHNICAL AND REMEDIAL ENGLISH

Arthur J. Poole
 Assistant Professor
 Nashville State Technical Institute
 Nashville, Tennessee

Good morning, I'm Mr. Poole; I'm also with the English Department. I would like to give you a brief review of our English composition courses which include Report Writing. Our basic composition course is EN-114. In this course we emphasize basic skills of rhetoric and usage. It is not a grammar course per se; rather we strive for three objectives: clarity of written expression, acceptable style and usage, and logical organization of material.

The English composition course is actually divided into three courses. We have a basic non-credit course, EN-10, which does deal with grammar. It's a very basic course and deals with such things as subject-verb agreement, pronoun reference, misplaced modifiers and other fundamental principles. It is designed to provide a complete review for the marginal or the submarginal student. However, by the time the student reaches EN-114, we expect him to have the very basic skills under control. That is, he ought to know that a singular subject takes a singular verb; he ought to know the difference between an object and a predicate. In the regular composition course, therefore, we emphasize the principles of rhetoric and style in writing. This is a difficult thing to teach, as any writer would admit. There's no one way to teach writing. But NSTI is a technical school and, therefore, we are interested in certain principles that would apply more to technical writing than to other areas of creative writing.

At this point, one might ask what are some of these properties of technical writing? Clarity, control, dignity, authority, veracity, ethicality, and objectivity are some of the more important characteristics. Objectivity is an especially important virtue that is emphasized in Report Writing. We have five areas of technology and in each of these areas students are required to prepare laboratory reports, case studies, various reports, and term reports dealing with their specific fields. We feel that all their technical knowledge is of no use unless it can be communicated to their peers, to their superiors, and even to their subordinates. So in report writing we try to teach the students to be objective. In fact, we try to define a report and in this regard reports must adhere to at least two rules. First of all, they must be capable of verification. That is, they must deal with facts, data, information that is collected accurately. Second, they ought to exclude, as far as possible, inferences and judgments.

An inference, we try to let the student know, is a statement about the unknown made on the basis of the known. Often times, students will fall into this pitfall. They will make assumptions based on things they see without really knowing the underlying cause. There is really no place for inferences in technical writing. Teaching students to avoid inferences is one means of teaching objectivity to students.

Technical writing also involves qualified judgments on the part of the writer. Judgments also involve opinions, but generally judgments are qualified. That is, the evidence is such that it will support the final opinion or conclusion. And so, we define a judgment as all expressions of the writer's approval or disapproval of the occurrences, persons, or objects he is describing. Scientific verifiability rests upon the external observation of facts, not upon the mere heaping up of judgments, as you will see when Mr. McDow demonstrates his equipment. One has to tabulate the data accurately. You don't make a judgment, a claim, without the support of some type of verifiable data.

I have a sample student report which will illustrate the format of a typical report; and, interestingly enough, the report is entitled "Where To Go--A Comparative Study of Data Processing Schools in the Nashville Area." This report was prepared by one of Miss Menegar's students. It begins with a letter of transmittal. The letter of transmittal is an effective introductory element to a report. It states the authorization for the report and the title, defines the problem, and also contains a brief summary of how the person will tackle the problem and it concludes with the recommendations of the writer. It serves as a cover for the report after the title sheet. The Table of Contents is often the next item in a formal report. Of course, with a technical report one may also have an approval sheet and a distribution sheet indicating to whom the report goes. The body of most technical reports begins with some introductory summary or abstract which essentially summarizes the key points of the report. The report is appropriately broken down into various areas dealing with the various programs of study, the location of the various schools, the evening classes, credit considerations, degree programs, etc. Now any information that would detract from the body of the report (that is, interrupt the continuity of the report) should be placed in the appendix or addendum of the report. Students learn to organize such material that would not belong in the body since the reader might want to refer to it. Here we have such things as charts, tables, breakdowns, statistics, graphs, and even drawings. This is a typical report which represents the results of a quarter's work. It is prepared as a final project and it often counts a good part of the student's grade. In my class it counts one-third of the student's grade.

PHYSICS DEPARTMENT

Dr. Robert S. McDow
Associate Professor
Nashville State Technical Institute
Nashville, Tennessee

Good morning. I feel a little out of place up here behind this microphone, and I am not going to talk behind it very long. Mr. Rubin and I want to demonstrate to you some of the mathematics and physics that the students encounter in their first year at NSTI in a technology program. So I am not going to be doing much talking, I am going to be doing more working with the apparatus up here.

In physics I am sure that you have often heard the phrase "in the absence of friction," or "if it were not for friction, this would happen." To demonstrate experiments in the absence of friction, the Ealing Company has developed an air track, not to eliminate friction, but to get it down to where it is so small that we don't have to pay attention to it. This air track works by blowing in air through the end, and the air comes down the long triangular extrusion and comes out some very small holes that you probably can't see. This continual rushing of air coming out will allow these solid metal or aluminum gliders to sit on a film of air. Once they are sitting on a film of air, you can give them a shove and they will continue to go at a very constant velocity. They only lose about half of their velocity in maybe forty or fifty seconds. I am going to turn it on in just a moment, but first I want to get you oriented to what I am going to do.

It is nice to know the velocity of the cars as they go along the track because then we can calculate momentum, energy and make our experimental determinations in a quantitative manner. To determine the velocity you need to know how far the thing went and you need to know how long it took. You always divide how far it went by how long it took. So let's take a car, say a half a foot long, that is 0.5 feet and 6 inches. I can allow this car to stop a beam of light as it goes through the photocell gate and allow this photocell gate run a clock which I know you cannot see the hands of. If it runs a clock for every second or millisecond, every thousandth of a second really, if it runs this clock while this six inches is going through this gate, you can calculate the velocity of this car. I am going to do that in just a moment and we are going to predict the velocity with the track tilted at a small angle. Mr. Rubin is going to do most of the predicting; I am going to stand up here and try to get it to come to our right. Let me now turn this thing on and show you how it works. The blower is in the back because it makes a lot of noise. It is just a vacuum cleaner back here running in reverse.

I have managed to get the track fairly level and the glider will not take off one way or the other very fast. It does not take very much to make this thing move, and by giving it a shove it will continue

to go for quite some time. Let me see if I can get that clock running--you plug it in and turn it on. It is not working now because I set this up in a special way. You can see it is pretty friction free, it is still going. The students in the laboratory do this experiment, but they use a somewhat smaller track, but they all do their own. I am going to demonstrate very briefly one of the experiments they do.

It turns out that if you look at the law of conservation of energy and the conservation of momentum and you go through about six pages of equations, you will find that for any elastical collision, that's a bouncy collision like these springs, that the approach velocity of two objects will equal the separation velocity. If these two cars are coming together at let us say 4 feet per second, when they bounce they are going to be going 4 feet per second with respect to each other. It also means that if a car is going along like this and another car is catching it at say 2 feet per second that when they bounce apart it will be 2 feet per second that they separate at. Let's watch and see if this works. Let's take one car sitting still and a car of equal mass coming in and hitting it. There is the approach and there is the separation velocity. Those are equal. I can't demonstrate it to you quantitatively because, well, I know it takes the students a couple of hours to do it, and I'm sure it would take me probably two and a half hours. The first velocity does equal the separation velocity. I'll do it kind of slow and I'll wave my hands to see if it comes out right. Here's the approach and there's the separation. Notice that this car is continuing to move and this one is going very fast. But that separation velocity is equal to that approach velocity. Now it works the same way if the Volkswagen hits the Cadillac, the same sort of thing except the Volkswagen bounces off and goes backward.

Now I want to do a real experiment. This is one I hope to be able to do in about two minutes because I know you are getting ready to take a break. And this is an experiment that the students do in the laboratory. What I am going to do is tilt this track. I've got some little blocks here. Each one is a half-inch thick. I'm going to tilt the track and I'm going to let the car go from up here and it's going to go down hill this way. And you know the further it goes the faster it's going when it gets there. We are going to predict mathematically how fast it's going when it gets there. It's going to go six feet. The angle of tilt is going to be very small. Mr. Rubin will mention this, 5 milliradians, or something like that. And it is going to go through this clock. Now let me just demonstrate this clock very briefly. Some of you will be able to see that hand. Anytime that this car is in that gate, that clock is running. Now it took the car .728 seconds to go through the gate. If I divided by half a foot by .728 seconds I would get the velocity in feet per second.

This is a vector diagram of the problem I am going to do, or the experiment that I am going to do. Here's the tilted track. This line represents the line of the track. This angle, theta, which we will be measuring in radians will be very small. A half an inch on that nine

foot track is not going to be a very big angle. Now when that track is tilted like that and that car is sitting on that track we all know that the force of gravity pulls it straight towards the earth. The force of gravity always acts straight down. Well we can resolve this vector force, this is the force due to gravity and is equal to mass times acceleration due to gravity. This force can be resolved into two components. One component is a little bitty short arrow or vector which tends to move the car down the track. It's not a very big force because the track is not tilted very much. The other component is one which is not shown on the diagram but it is perpendicular to the track. It tends to keep the car stuck to the track. We're not going to worry about that one because we've gone to a lot of trouble to keep the car riding on a film of air and we're not going to worry about that force. But there is a little force that tends to accelerate the car. Now Mr. Rubin will take over from here and show you the algebra that students have to go through.

Using the overhead projector and with the aid of a vector diagram and equations, Mr. Rubin explained the mathematics that was involved with predicting the velocity of the glider at the end of its trip down the track. We predicted that the final velocity with one block under one end of the track would be 1.46 feet per second. With four blocks under the track the glider should be going twice that fast or 2.92 feet per second. The experiment was performed and the results obtained were within 10 percent of the predicted values.

INTRODUCTION

Jack L. Sandlin, Superintendent
State Area Vocational-Technical School
Nashville, Tennessee

We are honored and glad to have you people over with us for a while today as well as tomorrow. I have limited the group that is going to be talking with you today to five minutes each, and I know that is difficult when you start talking about "Vocational Education", you don't stop in five minutes. To keep me from getting stopped, I had just better not even start. We are pressed for time and the schedule is tight, but I do sincerely hope that when the week is over you will find somewhere in your schedule whether this summer or this fall, at your convenience of course, a day and will say, "I want to go back out to the Area Vocational-Technical School to see what I can see. You might be surprised!"

We have so many absences with staff members off or in-service schedules, and things of this nature, that it is really rather quiet around here. We would like for you to know who is gone. We do have a "filler-in" and you won't miss a single shop or department. You will miss, however, seeing some student activity which is, I think, something wonderful to see.

This week, in Chattanooga, there is an in-service for machine shop instructors, tool and die instructors, and drafting instructors. (We have two machine shop instructors, one tool and die instructor, and one drafting instructor gone.) Also there is a special clinic being conducted for automotive air conditioning. You know, if your automobile air conditioner doesn't work properly you get awfully unhappy. The people that service them go to factory schools for upgrading; they learn the latest, down to the smallest detail of things. Our refrigeration and air conditioning, auto mechanic, and auto body and fender repair instructors are in this special clinic today and tomorrow. Their classes are, however, operating and capable people are in charge of the departments. Our two RMs, as lots of you know, Mrs. Joan Toney and Mrs. Frances Maines, were absent yesterday and most of today. Some of you know of Mrs. Dycas, who was president of the AVA. She passed away night before last with terminal cancer and was buried yesterday. Mrs. Toney was vice-president elect but she is president now. Mrs. Maines is vice-president of the Middle Tennessee Health Group and she is also there. Their classes, the nurses' classes, are in operation. That makes about nine of our staff among the missing around here.

This morning, for a short time, we are going to visit six departments: Cosmetology, Drafting, Child Care, Unit Record, Learning Center, and Watch Making. Drafting will be explained by Mr. Randy Dayhuff who is the Related Instructor. From there we will go into the Child Care Department with Mrs. Ezell. The Child Care Department is the only program of this type in the State. Here adults are being trained for

employment as instructors, assistant instructors, and employees for pre-school day care centers. Quite an exciting program. Mrs. Ezell will tell you what is happening in her present class.

We will skip the CLA class, Certified Laboratory Assistants, which is on your list, because they are on a field trip today. We will visit the Unit Record Equipment instead. Also, we will go into Mrs. Brandt's Department, the Learning Center, one of the more exciting classes. (It is a department that I will let her describe.) There are 57 students in the Learning Lab today.

Most of you know Mr. Bob Tolbert sitting at the end of the table, and Mr. Lee Rotenberry, who was with us the other day. When we finish here, Mr. Tolbert and I will divide you into two groups. With this, I'm going to hush and start with the lady on the end and work our way down. They wouldn't come up front, but I'm going to introduce them anyway. Mrs. Brandt is in charge of our Learning Center.

LEARNING CENTER

Mrs. Alberta Brandt
State Area Vocational-Technical School
Nashville, Tennessee

I am Alberta Brandt, and I am a colleague of yours. I taught for a "few" years in the Metro Schools. I won't tell you how many, but I have retired anyway. Upon retiring, I decided that I needed something real exciting to do. This is one of the most exciting things that I have done in my life, the job that I have here. It is most rewarding and it is fun. We have our moments, our ups and downs, but we think that we are on the right track now. What I do is to try to motivate and evaluate students' progress. We don't call ourselves "Remedial Lab" because the first time we had "remedial" put in somebody said that is an "idiot room." Well, you know how that goes, so we don't call ourselves that. Something you haven't learned is not remedial. I teach things that people have never learned. We teach basic learnings: Basic reading which starts with about the third grade level and goes through high school; basic spelling, phonics, arithmetic--how to add, multiply, subtract, and divide--and basic communications on how to talk, and good English which they should have learned somewhere down the line and didn't, or were never exposed to it.

I want to welcome you to our school. We are proud of it. We think we are doing a creditable job. Not everyone, as you know, is college material. Let's face it, we have a place right here for those people who do not need to go to college. We want you to encourage these boys and girls to enroll in our school or come out and give us a try anyway.

COSMOTOLOGY

Mrs. Ernestine Morse
State Area Vocational-Technical School
Nashville, Tennessee

We are certainly happy to have you visit with us this morning. I'm Ernestine Morse, Cosmotology Instructor, and I would like to tell you about our class. You must be 17 years of age, have had two years of high school or its equivalent, to enter our class. First, the would be student fills out an application with our school, is interviewed and tested, and placed on our waiting list. Sometimes it takes two to four months to be enrolled.

After enrollment, an application is submitted to the State Board for Student license. This costs \$4. We have a training period of 1,500 hours. (They must have had 300 hours before they actually work on the patron.) We train them to manicure and they practice with each other, and after they have had 300 hours they can work on patrons. As Mr. Sandlin told you, the State employees, the students, friends, and mothers visit us, and the orphans who live nearby come during the summer. Sister Susan said that they would talk all week about coming in.

A bit about myself: I've been with Cosmotology 12 years. I've been teaching four years, and I have started my third year with the Area Vocational School. I have graduated 17 students in the little over two years that I have been here. They have all passed the State Board. I have two going this Monday. There are over 600 all over the State of Tennessee to take the State Board this month. We have two days for the State Board--Monday and Tuesday. We are really glad to have you. When you come into the classrooms, I would like to answer any question that you have. If we can help you, call me for an appointment any Monday or Tuesday, Wednesday, or Thursday. We would be happy to serve you.

UNIT RECORD DEPARTMENT

Mrs. Pam Reece
State Area Vocational-Technical School
Nashville, Tennessee

We are happy to have you here today. I am an instructor in Data Processing, and I have been in the field for a few years. The requirements for students entering is that they be 17 years of age and pass a GATB test. Right now I have two programs. The first is a six to eight week keypunch course. The student learns the keypunch machine and how to verify. They get a certificate when they complete the course for a keypunch operator. The next course they can complete, some of them do and some of them don't, is to learn the three other machines we have. They are the Sorter, 502 Reproducer, and the 402 Accounting machine. This together with the keypunch completes the six months course. Most of the students that I have had have only taken the keypunch because they can get a job quickly. The best ages are from 18 to 25. I find that they are the easiest to place, that is with a high school diploma. However, I have placed students without a high school diploma, but it is much easier if they do have it. It does help them to know typewriting, but I have had students who have never had typewriting before so really that doesn't make too much difference. The salary range for a keypunch operator is anywhere from \$300 to \$375 a month. The machine operator, the one who takes the full course, makes anywhere from \$325 to \$400 a month starting. In job placement, out of the students I have had for over a two year period, I have placed about 85 percent.

CHILD DEVELOPMENT PROGRAM

Mrs. Suzanne Ezell
State Area Vocational-Technical School
Nashville, Tennessee

Eighty percent of the child's intellectual growth takes place by the time he is eight years old. By the time you folks get them and with what you have had to deal with, there is not too much hope of upgrading some of them. That is the reason we feel that only the best trained and best qualified people should work with pre-school children. That is the reason we are here to train people to be better prepared pre-school workers. The graduates from this program are employed as assistant teachers or aides in day care programs or in kindergartens. We have also placed people in private homes in governess type positions; we have people working with people in hospitals and psychiatric centers with emotionally disturbed children and with handicapped children. We have placed people with government agencies that work with welfare children by going into homes and teaching mothers how to take care of their own children, plus the field is open with any number of jobs available for girls who are interested in working in this area. Our curriculum consists of written assignments covering basically these areas; we think it is important to know how a child grows and why he grows the way he does, the pattern of growth, how to guide children, and how to discipline children, the idea that children wander at play that if you sit children down with a pile of blocks and let them play all morning, and the health and safety of a child.

In addition to using movies, filmstrips, tape recorders, cassetts, learning practical theory, we also have laboratory experiences in art, music, science, math and literature for pre-school children. This is where we experiment back in our room with some of the things that children ought to be doing and can be doing. Then the students who are advanced and who have finished a lot of this work go into day care centers three days a week, Tuesday, Wednesday, and Thursday, and actually get practical experience working with the children. Today, when you visit my classroom you will see that there are only two students here. The reason for this is that the rest of the students are out working in day care centers. One of these students is new and is not quite ready to go into the centers yet. One of them is just getting ready to graduate and is back in class finishing some last minute assignments that she had to do in order to graduate. The salaries have traditionally been very low in this field which is very upsetting to us, but they are rising as the boom of child care is beginning to take effect in Nashville. Nashville is a little behind in this. A lot of the other Metro areas are much-in for their child care services boom, and Nashville is coming into this with more every day.

WATCHMAKING

Dean Jenne
State Area Vocational-Technical School
Nashville, Tennessee

I am Dean Jenne, Instructor of Watchmaking. My experience, as far as watchmaking is: I was manager of a jewelry store before going back into the service. I managed Sears Roebuck watch repair here in Nashville. I opened the William Bracker Jewelry Store on White Bridge Road before going into business for myself, and then Mr. Sandlin hired me for out here. I have had a broad field as far as managing and operating my own business. I have had 20 odd years as a watchmaker.

The course here is set up for 18 months. It is set up in such a way that when you finish one step you go to the next step. Some people can do it if they are mechanically minded, or have had a lot of mechanical work. Some people have done it in one year. Others are slow and may take them more than a year. They can finish it as fast as they want or as slow as they want. The main thing is to teach them to do it and do it right. As far as the training part in watchmaking sometimes it is a little more difficult than most vocations to teach. Before you can actually teach them watchmaking or even work on a watch, you have to teach them to use small tools and to work under a magnifying glass. The hardest part is the working under a magnifying glass. For some people, it may take a month or two months or even three months before they can actually start to work on a watch. Next, they start working on time measuring devices. That is all a watch is. Working on clocks are easier because they are larger and easier to understand and to see. From that they are taught to work on parts of a watch, such as putting a hand on, jewels in, main springs in, and straightening the hair spring. After this, you actually start working on the watch. From there on out, the students repair watches all the time. We don't have any trouble getting watches here. They are always behind. The students and the State Office keep us well supplied with watches and clocks. They repair parts for the rest of the course and go back to reviewing all the other parts they have learned. A lot of schools are set up for doing all "dummy work" on old beat up watches. You can't learn too much on that for there is no interest, whereas most of the work done here is on customer watches just like in the jewelry store. They know that they have to get it right because somebody is going to depend on them. In a jewelry store, you don't have any comebacks. You take the watch and work on it or else. A certain percent of comeback is understandable. If you go over that percent, you are in trouble, and if you go under that percent, you are in trouble. As far as the requirements in the course, the student has to be 17 years of age or older. There is no education limit on it. They have to be able to read well enough to understand their textbooks. The next part is the test which is eye-hand coordination, finger

dexterity and the depth of feel. When we started eight years ago, we let anybody in that wanted to come in and try it. We have found that with the lower scores it is practically impossible to become a watchmaker. The main thing you have to have is the desire. If they don't have the desire, but have the mechanical ability it is pretty hard because the work is so close and so tedious that you have to like it. If you don't like watch repair and stay in this field, the largest part of them wind up in a sanitarium or become an alcoholic. It is just too much of a strain. It is a field that if you like it, you will really enjoy working in it. It is rewarding and there is a challenge every day because no two watches have the same problem. Again, I say you must have the desire to work with it. When you come through the class, if you have any questions, I'll try to answer them

DRAFTING

Randy Dayhuff
State Area Vocational-Technical School
Nashville, Tennessee

I am Randy Dayhuff. I am the Industrial Theory Instructor. I came here with a broad background not very deep in any field but rather wide in machine, mechanical engineering, mathematics (certified to teach math, grades 1-12), and I have been a "maverick". I have been in a lot of departments. I was in automotive body and fender this morning before you arrived. The instructor in that department was teaching a class.

Our Drafting Department is what I want to tell you about. We have two classes in drafting, a full-time day class and a part-time night class which meets four hours a night, four nights a week. We have a great demand for draftsmen. Right now, we don't have anyone within a year of graduating. They are hiring them before they graduate. I understand that we have had a call lately for more than we have in classes and we only have 20 in a class. The demands sent to us for graduates is great. We have, basically, five areas of drafting. We try to prepare them for engineers, in mechanical, architectural, electrical and geographic map making. I work with this class two mornings a week for about an hour and one-half. Most of what I teach is mathematics, and math, as you know, is used in most all fields.

I'll be in the Drafting Department when you come by. I don't know if I can answer all of your questions, but I will try. Feel free to ask me any you may have. Tomorrow, I will be in the machine shop in the Tool and Die class. I am basically familiar with both of these.

INTRODUCTION

Jack L. Sandlin, Superintendent
State Area Vocational-Technical School
Nashville, Tennessee

We are glad to have you back this morning. We have another group of our staff to give you a thumbnail sketch of the departments that they represent and the things they do. They are: Mr. Smith Robertson in Bookkeeping; Mrs. Bess Wright in Secretarial, and Mrs. Forrest Ann Clements in Clerical and who heads up the Office Occupations Department; Miss Carol Smith, Certified Laboratory Assistant; Mr. Walker Hood, Basic Electricity Electronics; and Mr. Wallace Hull is our "Welder"; Mr. Bob Tolbert, Assistant Superintendent, and he will be one of the tour guides; Mrs. Joan Toney, our Health Department's RN, is back with us today; Mr. Gordon Harless, Office Machine Repair. We have no formality in this. We will start with Mrs. Clements from the Office Occupations Department.

OFFICE OCCUPATIONAL DEPARTMENT

Mrs. Forrest Ann Clements
State Area Vocational-Technical School
Nashville, Tennessee

I am Mrs. Forrest Ann Clements, Head of the Office Occupational Department. First, before we start, I would like to pass out these listings of the courses that we teach in our area. There are three of us in Office Occupations. There is Mr. Smith Robertson who teaches the Bookkeeping Section. However, we do have an integrated program whereby each of us teach most of the students one particular subject or more. Next to him is Mrs. Wright, who teaches our Secretarial Section and I teach the Clerical. Mr. Robertson has many years of experience in his field and in various duties. He has been with the program here since it was out at Hume-Fogg in 1964. Mrs. Wright has been with the program starting at Hume-Fogg in 1965. I am only a late comer. Both of these people are very well qualified, very good, and have a very good program. I have been here since September of last year. I am one of those who interrupts a college career to go to work. I worked for nine years then I went back as an "old mama" and got a degree last year. So I am one of those who proves that it can be done if you want to.

We are all firm believers in vocational education. We feel there is a place for everyone. During the last year we have had in these areas a total of 145 people enrolled. They have stayed for various lengths of time and we have tried to prepare them for work. Now, we have 55 currently enrolled, which means we have had 90 people that have passed through our areas that are not with us right now. Over sixty-six percent or two-thirds of those are working in jobs that we have trained them for. Again, this may not seem a very high percentage to you but yet with the many qualifications and with all the competition that we have in the Metro area where the jobs are available, we feel that this is a fairly successful percentage. We have about 20 positions that we train our people for. A secretary covers a multitude of sins. She can be anything from a very high level "executive secretary" on down to a "file clerk". We do, however, classify the different positions and the pay is classified according to the training. We have various steps. That is, if a girl or boy comes in and cannot stay to complete the course, the part which they do complete entitles them to a DOT title which the State gives and thus they are qualified to do some phase of work. Not everyone can be an executive and not everyone can be a bookkeeper. There are, however, various jobs and various setups in each organization. We try to train the people that are needed to meet the needs of the community.

We will be glad to go over everything with you when you come to our department and answer any questions you might have.

CERTIFIED LABORATORY ASSISTANT

Miss Carol Smith
State Area Vocational-Technical School
Nashville, Tennessee

I'm Carol Smith, Certified Laboratory Assistant Instructor. Those of us who work in the medical laboratory love to do some bragging and I always enjoy talking about it. The reason we enjoy talking about it so much is that on all the doctors and nurses shows we see we get excited but never get to express what a big roll we play in medicine. Here, we have the opportunity.

The laboratory itself is a complex structure unlike any other department in the hospital. I have worked primarily in the hospital. There are a few people who work in State doctors' offices. The laboratory is structured under a pathologist who is an MD with five years of residency. This is a lot of education. Working under a medical technologist as a medical technician and working after that as a CLA, we are training the bottom level of laboratory workers in our program. The difference in all of these levels is primarily education. The medical technologist has a Bachelor of Arts or better degree, plus a year's training. The medical laboratory technician has an Associate Degree or a junior college degree, plus a year's training. The CLA has only one year's training. The duties of these various levels of training vary from hospital to hospital but are aligned according to degrees of difficulty.

Most people just don't know what goes on in a laboratory. For example, you may not be aware that the average size hospital is around 300 beds and you give around 500,000 tests in a year and anywhere from 20,000 to 30,000 in a month. This is a lot of work. The range of tests which can be given in a laboratory is around 350. Under different departments you may be working with chemistry, bacteriology, urinalysis, parasitology, blood banking, and other special departments. So you can see that it is a complicated field to a certain extent.

I am a medical technologist and I do have a degree. I have received the training program that goes with the medical technology. I do have four or five years experience and I am older than I look. The CLA is doing the routine procedures in the laboratory. That doesn't mean that they are not complicated. They are just routine, done the same way all the time. They have been taught to do laboratory procedures, how to pipet, etc., the very simple work all the way up to computerized equipment. The computer does all the things automatically and has lights flashing and it is exciting. We have enjoyed electronic equipment. However, all of the duties will have a wide range, complicated and sophisticated as they are. They will not be required to actually develop new tests or to do research or to supervise. Most everyone is acquainted with the laboratory when they come to take their tests in the hospital. This is probably the simplest thing that we do and almost the only contact we have with the patient.

Our CLA class has several things that are required. They are required to have a high school diploma and a year's training. When they are finished with a year's training, they have several qualifying examinations they must take. There are two in Tennessee. They are required to pass a State examination given by the Tennessee Department of Public Health. They are also required to pass a registered examination given by the Accrediting Society which is operated by pathologists. As stated, they must pass these two examinations before they will be allowed to work in a laboratory. So they must have a certificate from a certified school, pass a State examination, and pass a national examination. Since you are counselors I might mention the pay level at the present time in Nashville starts around \$450 a month. If they want to go on into other areas their salary may be higher. For example, the medical technologist starts around \$650 a month. The in-between level, the MLT, Medical Laboratory Technician, starts around \$550. This gives us an idea of what the earning power will be.

When I go to look at a prospective CLA student, there are several things that I look for that are important attributes. First of all, they need to be at least semi-academic oriented. In other words, it won't do for a person who is not doing fairly well in his academic studies. We estimate that we will increase the student's vocabulary by a minimum of 10,000 words in one year. The student who thinks that he will just be wearing a white coat and looking important that is just not what it takes. It takes being interested in medicine and being willing to study. We make them study. They will need about \$50 for books and supplies when they start.

Another thing that helps us is that they have done volunteer work in the hospital. By doing the volunteer work it gives the student an idea what they are in for and will give them a chance to look in before they actually go into something. The actual requirement is that they be between the ages of 17 and 55. We do, however, have older people in the program, and they work out marvelously. Also they must have a high school diploma and pass the GATB test and be physically fit.

NURSING

Mrs. Joan Toney
State Area Vocational-Technical School
Nashville, Tennessee

I'm Joan Toney and I'm only half of the nursing team which teaches the nurses Assistant Program here. The other half is Mrs. Frances Maines. She is at Donelson Hospital this morning with some of our students. These students have reached their clinical phase.

I'm a graduate of St. Thomas School of Nursing, and I attended Nazareth College in Louisville, Kentucky. I've been in the business 19 years; in fact, many more years than I like to admit. I've been in Vocational-Technical Education for six years. Prior to this, I was Head Nurse at St. Thomas Hospital in the maternity ward. If any of you have been in the hospital in recent years, you will have noticed that all the bedside nursing care is taught by non-professionals or semi-professional people. This is the name of our game. We teach the Nursing Assistants to help or assist the professional nurses and the LPN nurses. Our class is approximately three to four months in length.

Mrs. Maines and I feel (and I don't know what the administration is going to say about this) like we have a real unique program in that we're the only class in Health Occupations in the State of Tennessee that takes in students whenever there's an opening. Nearly every Monday we get new students. We can take 28 students. We have 26 presently enrolled in our class. Of those 26 students, 12 of them are in the clinical area of their training. We have programmed instruction and these students can progress at their own rate of speed. We do have a set number of hours that these students must complete in theory, and we do insist that they do have 25 days of clinical experience. This provides a lot of patient contact. The entrance requirements are basically the same as the other courses, however, it does not require a high school education. Since July 14, last year, we have had 37 to complete the course, and we've had 99 percent placement.

WELDING

Wallace Hull
State Area Vocational-Technical School
Nashville, Tennessee

I am Wallace Hull. I started in the welding field in 1951 when I went into the Armed Services. I came out and have been welding here, there, and everywhere ever since. The job I had previously before I came with the Nashville Area School was with the Nashville Gas Company on gas pipelines.

Mr. Sandlin says I know all about welding. That is going too far. Nobody can keep up with it really. I guess the welding technology has probably grown more in the past 18 years than any other industrial trade. We take our students and start them in welding oxyacetylene as a basis. The students will stay there approximately five to seven weeks, or a total of 175 hours. We move on from there into arc welding, or stick electrode welding, where they will spend time welding in all positions -- flat positions, vertical positions and overhead -- for a total of 390 hours. This is the base number of hours. However, they may take more time if they need it. We go from arc welding to heliarc, both tungsten inert gas and metal inert gas welding, for approximately 140 hours. Microwire welding is really the going thing today in welding, semi-automatic welding with flux coat wire. This is one of the areas where there is going to be a big manpower demand. The welding industry is growing so fast that they still can't keep men. No one is hurting for a job in welding today. I might say to you, as counselors, that any welding experience that these boys can get in high school is a big help when they come into our program. A boy must have mechanical ability. He has to be able to work with his hands. You may find that your sharpest, brightest students will come in and have more trouble learning to weld than someone who can't even read and write.

I might give an example. One of our former counselors, Mr. Ward Collins, who is now principal at Mt. Juliet Elementary, came to me one day and told me he had a boy he didn't know if we could help or not. He had been in special education all of his life and couldn't even read and write. When he signed a paper he had to get out his Social Security card and copy his name from it. Everybody around here called him my shadow. I couldn't even turn around without him stepping on my heels. But he had as much natural ability as a welder as any student I have ever had. He had more desire to learn than most and tried even harder. He is now employed with the Nashville Bridge Company as a second class welder and doing well. Stayed in school about 8 months, I believe.

Of course, we like to get students who are pretty good in math. When you go into higher welding, you have some trigonometry, figuring your angles, doing your layout work, etc., but it is not mandatory. We have more jobs available now than probably any other skill in the Nashville area. I had a call last week for three people to go to Volunteer Structures, and I could only send two over there.

INDUSTRIAL ELECTRICITY

Harry Kleespies
State Area Vocational-Technical School
Nashville, Tennessee

My name is Harry Kleespies. Most students call me Mr. "K". I teach Industrial Electricity. It goes from changing a light to the very complicated electronic equipment. Now we hope when our students leave here they'll be able to do more than change a light bulb, but also you must realize that they're not going to be able to redesign some of this complicated equipment. There's no way we can go that deep here. However, we do expect a student to go out and do a job under supervision, when he first leaves here. Then he can advance and go out and work on his own without supervision. The point that I'm trying to make is that we are training students to take over at an entry level, not as a trained electrician.

As to what is actually taught, I've divided this class into three basic groups -- the residence electrician, the maintenance electrician, and the construction electrician. I've also tried to draw a line between those three, but that line really doesn't exist. They all seem to overlap. Basically the residential electrician will go into wiring services for houses. He will have to know what goes into a kitchen, what is required by the National Code and local code of how to wire a kitchen. He has to know how to place the lights in a room, how to find the center of the room, how to wire, the size wires, etc. He should also know something about the intercom system and any other signal systems, doorbells, etc. In other words, how to do anything in the house. He has to know where to drill holes for the wire and mostly where "not" to drill holes. He has to know something of the background of how a house is built. In fact, they're building a mock-up house right now, trying to keep it as much like a house as possible.

Now getting into the maintenance, that's more or less plant maintenance and small maintenance on individual companies. He should know how to protect the equipment as well as the lives of the people on the job. That's the first thing. He should have background in how to "track" trouble. We try to keep them on basic ideas so that they can use those in developing their own skills getting into more complicated systems and equipment.

OFFICE MACHINE REPAIR

Gordon Harles
State Area Vocational-Technical School
Nashville, Tennessee

I'm Gordon Harles and I have the Office Machine Repair Shop. In Office Machine Repair we look for young boys possessing good aptitude and dexterity.

Along the education line, they must be 17 years of age and we would like for them to have had at least a fourth grade education. We train these students to repair and clean typewriters and adding machines.

In my class I have had approximately 50 students, and I find that the ones that have been the most successful were the handicapped or rehabilitated people who came through here.

BASIC ELECTRICITY

Walter Hood
State Area Vocational-Technical School
Nashville, Tennessee

I think all of us are glad to be here this morning, and we thank you for your attention. My name is Walter Hood. I teach the Electrician-Electronics Class. I might give you a small area of background. I've been in the electricity-electronics field since 1942. When I came out of the Navy I went with Moore-Hanley, Inc. and was with them 17 years as a television service representative as well as service manager. When I came with the Vocational-Technical School, I had been with Sears only a short time.

As Mr. Sandlin said, I taught Radio and TV when I first came. At the present time, and for the last year or so, I've been teaching Electricity-Electronics. We have had 53 boys and men through this class including the 19 students we now have. We teach the students coming into the school who will be going into Air Conditioning-Refrigeration, Industrial Electricity and Radio and TV. We would normally take 20 students into this class; however, presently we have 23. A spot sketch of what a person should have as he comes or goes into that area -- he should be able to figure math, or have some knowledge, not in great dept but certainly where he can figure from the standpoint of conductance, capacity, and reactance. He should be able to figure with the training that we give him to compute the circuits as we present them to him.

For the Air Conditioning Refrigeration Class we spend approximately 250 hours with the trainees when first enrolled. The Industrial Electrician people are with us approximately 300 hours although this could vary. Radio and TV people have approximately 1000 hours of training. This takes them right up to television itself. I might say this relative to the studies we have, we use three workbooks. The first is the primary components as related to circuitry. The second workbook is directly tube circuitry, and the third one is transistors. The Radio and TV students are taken through transistors and transistor circuitry. They then have approximately 200 hours on regular bench or lab training after this.

APPENDIX

SCHEDULE FOR VOCATIONAL-TECHNICAL SEMINAR

June 7-11, 1971

MONDAY - JUNE 7

- 8:30 - 9:30 Welcome and Orientation - Room C-105
 Mr. Edward L. Weld, Director, Nashville State
 Technical Institute
 Mr. Jack L. Sandlin, Superintendent, Area
 Vocational-Technical School
 Mrs. Dorothy Pease, Supervisor, Guidance, Metro
 School System
 Dr. Gilda Greenberg, Associate Professor,
 University of Tennessee at Nashville
- 9:30 - 10:30 Registration
- 10:30 - 10:45 Break
- 10:45 - 12:15 Motivation, Exit Levels, Learning and Teaching--
 Mr. Harold Gregory, Director, Curriculum
 and Instructional Services, Division of
 Vocational-Technical Education
- 12:15 - 1:00 Lunch
- 1:00 - 2:00 Student Services - Area Vocational-Technical School
 Mr. Lee Rotenberry, Supervisor
 Mrs. Nancy Holshouser, Counselor
 Mr. Cliff Huddleston, Counselor
- 2:00 - 3:00 Student Services, Nashville State Technical Institute
 Mr. Paul Morrow, Director
 Miss Dorothy Rich, Counselor
- 3:00 - 3:15 Break
- 3:15 - 4:15 Follow-up Methods and Procedures--Mr. Jim Judd,
 Supervisor, Area Vocational-Technical School,
 Division of Vocational-Technical Education

TUESDAY - JUNE 8

- 8:30 - 9:00 Speaker--Mr. E. H. Kriel, Director of Industrial
 Relations, Aladdin Industries, Inc.
- 9:00 - 10:00 Educational Resource Center
 Mrs. Diane Groves, Head
 Miss Janet Turner, Assistant Librarian

- 10:00 - 10:30 Speaker--Mr. Harold J. Black, Vice President of
Engineering and Development, AVCO Aerostructures
Division
- 10:30 - 10:45 Break
- 10:45 - 12:15 E.R.I.C. Materials - V.I.E.W. Program, Dr. Gary
Bice, Director, Coordinating Research Unit,
University of Tennessee at Knoxville
- 12:15 - 1:00 Lunch
- 1:00 - 2:00 Electronic Engineering Technology
- 2:00 - 3:00 Business Data Processing Technology
- 3:00 - 3:15 Break
- 3:15 - 4:15 Women in the World of Work - Dr. Gilda Greenberg,
U. T. at Nashville

WEDNESDAY - JUNE 9

- 8:30 - 9:30 Chemical Engineering Technology
- 9:30 - 10:30 Industrial Engineering Technology
- 10:30 - 10:45 Break
- 10:45 - 12:15 Career Development, Dr. Gilda Greenberg, U. T.
at Nashville
Attitude Toward the World of Work, Dr. Joe
Cozy, Assistant Professor, U. T. at
Nashville
- 12:15 - 1:00 Lunch
- 1:00 - 3:45 Tour: National Life and Accident Insurance
Company

THURSDAY - JUNE 10

- 8:30 - 9:30 Mechanical Engineering Technology
- 9:30 - 10:30 Pretechnical and Remedial Programs
- 10:30 - 10:45 Break
- 10:45 - 12:15 Assemble in Multi-Purpose Room of A.V.T.S.
Tour: Cosmetology, Drafting, Child Care,
Certified Lab Assistant, Watchmaking
and Learning Lab

12:15 - 1:00 Lunch

1:00 - 3:45 Tour: Aladdin Industries, Inc.

FRIDAY - JUNE 11

8:30 - 10:30 Assemble in Multi-Purpose Room of A.V.T.S.
Tour: Unit Records, Office Occupations, Health Occupations, Basic Electricity, Welding, Machine Shop, Tool and Die, and Office Machine Repair

10:30 - 10:45 Break

10:45 - 12:15 Assemble in Multi-Purpose Room of A.V.T.S.
Tour: Radio and T.V., Industrial Electricity, Auto Body and Fender Repair, Auto Mechanic, Refrigeration and Air Conditioning, Food Services

12:15 - 1:00 Lunch

1:00 - 3:00 Expectations--Mr. N. A. Crippens (Audio Tape)
Cultural Diversity and Values--Dr. Gilda Greenberg,
U. T. at Nashville

3:00 - 3:15 Break

3:15 - 4:15 Evaluation

Distribution of Resource Materials

COMPOSITE OF TALLY RESULTS OF PRE-TEST & POST EVALUATION
OF GUIDANCE INSTITUTE

(June 7 - June 11, 1971)

(Many of the responses in the comments appeared two or more times)

1. Do you understand the role and function of the Area Vocational-Technical counselor?

	Very	Reasonably	Some	Very Little	Not At All
Pre 1	11	14	4	0	
*Post 23	6	0	0	0	

2. Do you understand the role and function of the Technical Institute counselor?

	Very	Reasonably	Some	Very Little	Not At All
Pre 1	10	15	4	0	
Post 20	9	0	0	0	

3. Do you feel that the development of vocational maturity can be assisted in the typical public school system?

	Very	Reasonably	Some	Very Little	Not At All
Pre 12	5	8	5	0	
**Post 18	7	2	0	0	

4. Do you feel that the development of vocational maturity is being assisted in the typical school system?

	Very	Reasonably	Some	Very Little	Not At All
Pre 0	5	8	6	1	
Post 2	13	11	3	0	

5. Do you feel equipped to help high school youth move comfortably into the training in the Area Vocational-Technical School?

	Very	Reasonably	Some	Very Little	Not At All
Pre 1	16	9	4	0	
Post 19	10	0	0	0	

6. Do you feel equipped to help high school youths move comfortably into the Associate Degree program at the Technical Institute?

	Very	Reasonably	Some	Very Little	Not At All
Pre 1	13	14	2	0	
Post 19	10	0	0	0	

7. Do you feel that you are able to gather occupational information efficiently enough?

	Very	Reasonably	Some	Very Little	At All
Pre	3	13	13	1	0
Post	10	15	4	0	0

8. Do you feel that your ready store of occupational information is sufficient to handle your day-to-day professional needs?

	Very	Reasonably	Some	Very Little	Not At All
Pre	0	6	15	7	2
Post	3	19	5	2	0

9. Overall planning of the seminar.

Very Well	Reasonably	Adequate	Less Than Adequate	Poor
25	4	0	0	0

COMMENTS:

- Best that I have attended.
- Should have had more time to visit A.V.T.S. shops.
- Two hour blocks of time were tiring physically.
- A little too much time on each department.
- Exceedingly well planned.
- Varied activities with presentations both theoretical and practical level.

10. Overall evaluation of the learning experiences provided by the seminar.

Very Well	Reasonably	Adequate	Less Than Adequate	Poor
25	3	1	0	0

COMMENTS:

- Variety to the right degree.
- Mrs. Newton and Dr. Cozy were very good.
- I needed this seminar greatly. I feel that I can help my children more.
- Excellent goals - good implementation - enjoyable and stimulating.

11. Adequacy of staff in lecturing and promoting learning environment.

Very Well	Reasonably	Adequate	Less Than Adequate	Poor
25	3	1	0	0

COMMENTS:

1. Very good - excellent - wonderful.
2. Good balance of theory and practice.
3. It would be hard to suggest how it could be improved.
4. All staff members appeared prepared and competent in their area.

12. Evaluation of Technical School "in-school" tours.

Very Well	Reasonably	Adequate	Less Than Adequate	Poor
22	6	1	0	0

COMMENTS:

1. A little rushed, but since we came back for a visit, not a serious problem.
2. I felt too much time was spent on them.
3. Extensive information and interesting demonstrations of the work being conducted.
4. Informative and enjoyable.

13. Evaluation of Area Vocational-Technical School "in-school" tours.

Very Well	Reasonably	Adequate	Less Than Adequate	Poor
10	12	6	1	0

COMMENTS:

1. Not enough time in the shops, but we have been invited to return for more leisurely visit.
2. Explanations of programs were most interesting and informative.

14. Evaluation of field trip to National Life and Accident Insurance Company.

Very Well	Reasonably	Adequate	Less Than Adequate	Poor
9	10	8	1	0

COMMENTS:

1. Should have been more job oriented.
2. I would like to have talked to agents, etc., as well as data processing people.
3. Too building oriented.

15. Evaluation of field trip to Aladdin Industries, Inc.

Very Well	Reasonably	Adequate	Less Than Adequate	Poor
19	9	1	0	0

COMMENTS:

1. Feel more adequate in talking to students about this type of work.
 2. Informative - a side of the world of work that I had not heretofore observed closely.
16. Considering the objectives of the seminar, how effectively did the presenters contribute to learning experiences of participants?

Very Well	Reasonably	Adequate	Less Than Adequate	Poor
25	4	0	0	0

COMMENTS:

1. Question and answer periods following the lectures did much to produce effectiveness.
 2. Excellent.
 3. All objectives and desired counselor competencies were implemented through experiences provided.
 4. Every presentation was excellent. I enjoyed every minute of the seminar.
17. Taking into consideration the Objectives of the seminar, we would appreciate your candid suggestions concerning areas of weakness. We wish to strengthen the program in every way possible for future efforts. Please use reverse side of this sheet if more space is needed.
1. The best workshop I have attended in my 15 years in guidance.
 2. It has been great, very profitable.
 3. The amount of information has been outstanding.
 4. Thank you for a very pleasant and informative week.
 5. A.V.T.S. counselors were "short changed" time wise.
 6. N.S.T.I. faculty lectures concerning each area was particularly enjoyed.
 7. More contact with students and time to interact with them.
 8. It was great. I feel much more competent. You will be hearing from me.
 9. This has been a very good week! The leadership was excellent and the program just as good.
 10. Excellent. Suggest, however, that the break be at 9:30.
 11. Suggest that workshop be one week later in the summer.
 12. The schedule rushed us a little.
 13. Lack of opportunity for interaction among participants.
 14. Course descriptions could have possibly been less detailed.

15. Many students in my school situation can benefit from the programs at N.S.T.I. and V.A.T.S. and I now feel better equipped to work with these students.
16. A most rewarding experience and about the only way we could really get the needed information concerning the two schools and the opportunities here.
17. More speaker with meat.
18. Personalities of staff created an environment conducive to learning.
19. More student participation. Hands-on experiences should have been provided. More group discussions. Overall the seminar was great.
20. Well organized to meet all needs.
21. Follow the same format and future seminars should be successful.
22. The food and hospitality were great.
23. The seminar was tailor-made for counselors desiring to learn more about vocational guidance.
24. The resource materials cited and distributed were realistic and practical.
25. Developed within me a sympathetic attitude toward Vocational-Technical Education by informing me of the programs available to my students, giving me insight into industrial and business practices and procedures, and altering my perspective on the occupation development of students.
26. We tried to cover too much too quickly.
27. The cordiality and facilities were excellent.
28. It could have been much better if the papers we are required to submit to U.T. could have been completed by the end of the seminar.

*One participant was unable to complete post evaluation due to absence.

**In a couple of instances the participant overlooked a response or chose not to respond to certain questions.

SEMINAR PARTICIPANTS

VOCATIONAL-TECHNICAL SEMINAR

June 7-11, 1971

Nashville State Technical Institute

<u>Participant</u>	<u>School</u>
Shirley T. Becker.....	Hillwood High School
Mary A. Campbell.....	Donelson High School
William E. Crawford.....	Glencliff High School
Paul Dorris.....	Isaac Litten High School
Margaret Douglas.....	Highland Heights High School
Katie Elder.....	Continuing Education Center
Roger Flannery.....	Antioch High School
Martha Geist.....	Neely's Bend Junior High
Mary L. Hamby.....	Waverly-Belmont Junior High
Annette L. Hendrix.....	Maplewood High School
Kathleen Hobbs.....	Apollo Junior High
W. E. Hunt.....	Donelson High School
Jeanette Jones.....	Meigs Junior High
Ruth F. Kilgore.....	West End Junior High
Lola O. King.....	Donelson High School
Genella Markum.....	Antioch High School
Rob McGee.....	Two Rivers High School
Tressa Miller.....	Hillboro High School
Lorene Moss.....	Hillwood High School
Dorothy D. Nelson.....	DuPont High School
Bernidene Pinkney.....	Cameron High School

Dorothy Rich.....	Nashville State Technical Institute

Educational Psychology 5850
Problems in Educational Psychology
and Guidance

Dr. G. M. Greenberg
June 7-11, 1971

In developing this institute, several counselor competencies* were considered. These competencies should become a part of the professional counselor's goals. How do you rate yourself?

1. The counselor needs competence in utilizing and modifying a general perspective regarding the occupational world.
2. The counselor needs competence in understanding the psychological, sociological and economic variables contributing to changing concepts of work as a part of society.
3. The counselor needs competence in understanding the process of vocational development.
4. The counselor needs competence in collecting, organizing and disseminating vocational information.
5. The counselor needs competence in communicating information to students concerning post high school training opportunities.
6. The counselor needs competence in understanding basic principles of business and industrial management.
7. The counselor needs competence in utilizing the talents and services of the business-labor-industrial community in performing the vocational guidance function.
8. The counselor needs competencies in developing working relationships with non-secondary school counselors.

REQUIREMENTS

1. After each day, a one-page typewritten analysis of the learning experiences should be prepared. This will provide feedback needed for any revision of daily planning.

The first paper will be due Tuesday morning, June 8th and the last paper, Friday morning, June 11.

*Adapted from "Conference on Vocational Aspects of Counselor Education", Dec. 12-15, 1965, Warrenton, Va.

2. Each participant is requested to develop a workable project for his or her school based upon the experiences of this institute. On Friday, June 11th an outline of one to three pages should indicate:
 - a. the nature of the project to be undertaken in the fall.
 - b. the methods for pursuing this plan.
 - c. the types of research, library work, etc. that will be used in preparing the report.
3. The final paper must be completed by Monday, July 5th. Please make certain to get these projects to Dr. Gilda M. Greenberg, The University of Tennessee, 323 McLamore Avenue, Nashville, Tennessee 37203 - Room C-5.

Length of paper - maximum 15 typewritten pages. Format - use APA standards. (distributed June 7, 1971)

GOALS OR OBJECTIVES

1. Increased understandings of role and function of the vocational-technical schools and technical institutes by secondary school counselors and of secondary school counselors by vocational and technical personnel.
2. Strengthen counselor competencies in procedures for assisting school youth to move comfortably and purposefully into high school and post high school training in vocational and technical education programs.
3. Assist counselors to gain background experience whereby they can comfortably and confidently counsel with youth who do not wish to pursue the baccalaureate degree program.
4. Make available to counselors realistic, practical, and usable resource materials.
5. Increase knowledge of the developmental pattern in achieving vocational maturity and how development of vocational maturity may be assisted in the typical school.

Questions to be Answered

University of Tennessee
Dr. G. M. Greenberg

1. What distinctions are to be drawn among jobs, occupations and careers?
2. How may occupations be classified so that both their relationship and their major differences become clear?
3. What major trends exist with respect to the changing nature of our occupational structure?
4. What major trends exist with respect to entry occupations?
5. How can practicing school counselors be kept up to date on changes in occupations and occupational patterns?
6. What does "work" mean to those in various subcultures of our society?
7. How are concepts regarding "work" currently changing in our society?
8. Why is some "work" more highly respected than others to most members of a society?
9. What kinds of factors affect occupational choice?
10. What kinds of occupational choices are typically expected of students at various grade levels from various kinds of socio-economic backgrounds?
11. What kinds of vocational choice theories does the practicing counselor feel comfortable with as he seeks to understand occupational choices made by his students?
12. What are the commonly available sources of vocational information? How should a given piece of vocational information be evaluated in terms of its appropriateness for use in high school guidance? In elementary school guidance? In higher education?
13. How can vocational information be meaningfully communicated to students in groups? to individuals?
14. How can vocational information be usefully disseminated through teachers?
15. What training is required for entry into various occupations?
16. How can the "vocational" and "academic" portions of the curriculum and faculty be brought into more harmonious and productive working relationships?

17. What would make one kind of training opportunity more appropriate for a given student than another?
18. What sources of financial aid exist for the needy student?
19. What kinds of education are employers looking for in entry workers--and why?
20. What kinds of student work experience programs might be worked out with the business world?
21. How can and should school counselors work with counselors employed in vocational rehabilitation, veterans administration settings, and technical institutes?

EDUCATIONAL INFORMATION AND GUIDANCE

A SELECTED ANNOTATED BIBLIOGRAPHY

Bloom, A. Martin. Counseling the College-Bound Student: Successful Programs and Practices, Englewood Cliffs, N. J.: Prentice-Hall, 1969.

This is a how-to-do it book for practicing counselors. It describes in detail numerous programs and practices which have proven successful in providing effective pre-college guidance programs in public secondary schools.

Clark, Harold F. and Sloan, Harold S. Classrooms in the Military. New York: Teachers College Bureau of Publications, 1964.

One of a series of volumes by Clark and Sloan which demonstrates the volume of education conducted in non-formal educational settings. Other books in this fascinating project include: Classrooms in the Factories (1960), Classrooms in the Stores (1962) and Classrooms on Main Street (1966).

Computer-Based Vocational Guidance Systems. Washington, D. C.: U. S. Office of Education, 1969.

A collection of papers dealing with client-machine interaction. An excellent summary of the state of "hardware" services in educational and vocational decision-making.

Gannon, Frederick B. The Many Faces of Kevin Michael Pullen: A Guidance Case Study. New York: College Entrance Examination Board, 1969.

A case study which illustrates the complex dynamics of vocational choice and intermediate educational decisions. Also published by CEEB: Preparing School Counselors in Educational Guidance (1967); From High School to College: Readings for Counselors (1965); B. Alden Thresher, College Admissions and the Public Interest (1966).

Guidelines for Improving Articulation between Junior and Senior Colleges. Washington, D. C.: American Council on Education, 1966.

A statement of a joint committee of two professional organizations concerned with junior-senior college articulation. Suggests procedures for development of effective transfer policies.

Guiding the College-Bound Student: An Outline of Suggested Content for a Training Program. Evanston, Ill.: National Association of College Admissions Counselors, 1970.

Prepared by members of the Professional Education Committee of NACAC-counselors, counselor educators, supervisors, and admissions officers--as a guide for pre-service and in-service training of counselor, in educational guidance.

Herr, Edwin L. and Cramer, Stanley H. Guidance of the College Bound: Problems Practices, and Perspectives. New York: Appleton-Century-Crofts, 1969.

Guiding the college bound is viewed within the framework of decision-making theory and vocational development theory. Theoretical emphasis is complemented by practical chapters on groups, the application process, the admissions decision, ethics, and informational sources.

Hollis, Joseph W. and Hollis, Lucille V. Personalizing Information Processes: Educational, Occupational and Personal-Social. London: Collier-Macmillan Ltd., 1969.

Chapters 4-8 of this excellent text offer a comprehensive treatment of the collection, storage, retrieval, dissemination and integration of educational information in the decision-making process.

Looking at Private Trade and Correspondence Schools. Washington, D. C.: American Personnel and Guidance Association, 1963.

This booklet suggests guidelines for evaluating trade and correspondence schools.

Pulcrano, Charles. "The Class of 1960: A Study of the College Survival Rate", The School Counselor, 16, March 1969, pp. 277-280.

A study which demonstrates the need for extreme caution in making predictions of college success.

Reissa, Jean and Fox, Mildred G. Guiding the Future College Student. Englewood Cliffs, N. J.: Prentice-Hall, 1968.

Deals with the question of what is college guidance, discusses patterns of organization, acquiring and sharing information about colleges, and understanding and interpreting the admissions process.

Trent, James W. and Medsker, Leland L. Beyond High School. San Francisco: Jossey-Bass, Inc., 1968.

A follow-up of 10,000 high school graduates which seeks to determine the different impacts of college and employment on values and attitudes.

Venn, Grant. Man, Education, and Work: Postsecondary Vocational and Technical Education. Washington, D. C.: American Council on Education, 1964.

An investigation of education for semiprofessional, technical and skilled levels. Suggestions for the improvement of vocational and educational guidance, counseling and placement.

**AN OUTLINE FOR REPORTING OBSERVABLE
ASPECTS OF A BUSINESS OR INDUSTRIAL FIRM**

I. The business or industry

- A. Name and address of firm
- B. Products or services
- C. Major operations performed

II. Physical features of the environment

- A. Transportation to and from firm
- B. Mobility on premises
 - 1. Location of parking lot, access to buildings
 - 2. Location of cafeteria, washrooms, fire exits
 - 3. Space for movement, condition of floors
- C. Lighting, heat, humidity, ventilation
- D. Sanitation, orderliness
- E. Noise, vibration
- F. Health and accident hazards
- G. Other physical features

III. Psychosocial features of the environment

- A. Characteristics of employees
 - 1. Predominant age range
 - 2. Male vs. female
 - 3. Minority group members
 - 4. Physically disabled
- B. Interpersonal relations
 - 1. Isolated task vs. joint operation
 - 2. Opportunity for conversation
 - 3. Close vs. occasional supervision
- C. Other psychosocial features

IV. Physical demands of work performed

- A. Sitting vs. standing
- B. Limbs required
- C. Visual acuity
- D. Color vision
- E. Other sensory requirements

- F. Finger dexterity
- G. Weight lifted
- H. Other physical demands

V. Psychological demands of work performed

- A. Range of intelligence
- B. Memory and other mental demands
- C. Precision and other pressures
- D. Repetitiveness vs. variety
- E. Adaptability
- F. Other psychological demands

VI. Psychological rewards of work performed

- A. Autonomy, freedom of behavior
- B. Responsibility vs. lack of responsibility
- C. Exercise of initiative, judgment, creativity
- D. Direct or indirect service to others
- E. Other psychological rewards

SEVEN STEPS TO STAGNATION

1. WE'VE NEVER DONE IT THAT WAY.
2. WE'RE NOT READY FOR THAT.
3. WE'RE DOING ALL RIGHT WITHOUT IT.
4. WE TRIED THAT ONCE BEFORE.
5. IT COSTS TOO MUCH.
6. THAT IS NOT OUR RESPONSIBILITY.
7. IT JUST WON'T WORK.

THE CALF-PATH

One day, through the primeval wood,
A calf walked home, as good calves should;
But made a trail all bent askew,
A crooked trail as all calves do.

Since then two hundred years have fled,
And, I infer, the calf is dead.
But still he left behind his trail,
And thereby hangs my moral tale.

The trail was taken up next day
By a lone dog that passed that way;
And then a wise bell-wether sheep
Pursued the trail o'er vale and steep,
And drew the flock behind him, too,
As good bell-wethers always do.

And from that day, o'er hill and glade,
Through those old woods a path was made;
And many men wound in and out,
And dodged, and turned, and bent about
And uttered words of righteous wrath
Because 'twas such a crooked path.

But still they followed—do not laugh—
The first migrations of that calf,
And through this winding wood-way stalked,
Because he wobbled when he walked.

This forest path became a lane,
That bent, and turned, and turned again;
This crooked lane became a road,
Where many a poor horse with his load
Toiled on beneath the burning sun,
And traveled some three miles in one,
And thus a century and a half
They trod the footsteps of that calf.

The years passed on in swiftmess fleet,
The road became a village street;
And this, before men were aware,
A city's crowded thoroughfare;
And soon the central street was this
Of a renowned metropolis;
And men two centuries and a half
Trod in the footsteps of that calf.

THE CALF-PATH (continued)

Each day a hundred thousand rout
Followed the zigzag calf about;
And o'er his crooked journey went
The traffic of a continent.
A hundred thousand men were led
By one calf near three centuries dead.
They followed still his crooked way,
And lost one hundred years a day;
For thus such reverence is lent
To well-established precedent.

A moral lesson this might teach,
Were I ordained and called to preach;
For men are prone to go it blind
Along the calf-paths of the mind,
And work away from sun to sun
To do what other men have done.

They follow in the beaten track,
And out and in, and forth and back,
And still their devious course pursue,
To keep the path that others do.

But how the wise old wood-gods laugh,
Who saw the first primeval calf!
~~Ah! many things this tale might teach,—~~
But I am not ordained to preach.

A CURRICULUM TO MEET THE NEEDS

OR

THE ANIMAL SCHOOL

Once upon a time, the animals decided they must do something heroic to meet the problem of "a new world." So they organized a school. They adopted an activity program or curriculum consisting of running, climbing, swimming and flying. To make it easier to administer the curriculum, all the animals took all the subjects.

The duck was excellent in swimming, in fact, better than the teacher, but he made only passing grades in flying and was very poor in running. Since he was slow in running, he had to stay after school and also drop swimming in order to practice running. This was kept up until his web feet were badly worn and he was only average in swimming. But average was acceptable in the school, so nobody worried about it - except the duck.

The rabbit started at the top of the class in running, but had a nervous breakdown because of so much make-up work in swimming.

The squirrel was excellent in climbing until he developed frustration in the flying class where his teacher made him start from the ground up instead of from the tree-top down. He also developed "Charley Horse" from over-exertion and then got C in climbing and D in running.

The eagle was a problem child and was disciplined severely. In the climbing class, he beat all the others to the top of the tree, but insisted on using his own way to get there, which provoked the teacher.

At the end of the year, an animal cat that could swim exceedingly well and also run, climb and fly a little had the highest average and was valedictorian.

The prairie dogs stayed out of school and fought the tax levy because the administration would not add digging and burrowing to the curriculum. They apprenticed their children to a badger and later joined the ground-hogs and gophers to start a successful private school.

S. Reavis

School of Education

Northwestern University

THE POOR SCHOLAR'S SOLILOQUY

Stephen M. Corey
University of Chicago

No I'm not very good in school. This is my second year in the seventh grade and I'm bigger and taller than the other kids. They like me all right, though, even if I don't say much in the schoolroom, because outside I can tell them how to do a lot of things. They tag me around and that sort of makes up for what goes on in school.

I don't know why the teachers don't like me. They never have very much. Seems like they don't think you know anything unless they can name the book it comes out of. I've got a lot of books in my own room at home — books like Popular Science Mechanical Encyclopedia, and the Sears' and Ward's catalogues, but I don't very often just sit down and read them through like they make us do in school. I use my books when I want to find something out, like whenever Mom buys anything second-hand I look it up in Sears' or Ward's first and tell her if she's getting stung or not. I can use the index in a hurry to find the thing I want.

In school, though, we've got to learn whatever is in the book and I just can't memorize the stuff. Last year I stayed after school every night for two weeks trying to learn the names of the Presidents. Of course, I know some of them like Washington and Jefferson and Lincoln, but there must have been thirty altogether and I never did get them straight.

I'm not too sorry though because the kids who learned the Presidents had to turn right around and learn all the Vice Presidents. I am taking the seventh grade over but our teacher this year isn't so interested in the names of the Presidents. She has us trying to learn the names of all the great American inventors.

I guess I just can't remember names in history. Anyway, this year I've been trying to learn about trucks because my uncle owns three and he says I can drive one when I'm sixteen. I already know the horsepower and number of forward and backward speeds of twenty-six American trucks, some of them Diesels, and I can spot each make a long way off. It's funny how that Diesel works. I started to tell my teacher about it last Wednesday in science class when the pump we were using to make a vacuum in a bell jar got hot, but she said she didn't see what a Diesel engine had to do with our experiment on air pressure so I just kept still. The kids seemed interested though. I took four of them around to my uncle's garage after school and we saw the mechanic, Gus, tearing a big truck Diesel down. Boy, does he know his stuff!

I'm not very good in geography either. They call it economic geography this year. We've been studying the imports and exports of Chile all week, but I couldn't tell you what they are. Maybe the reason is I had to miss school yesterday because my uncle took me and his trailer truck down state about two hundred miles and we brought almost ten tons of stock to the Chicago market.

He had told me where we are going and I had to figure out the highways to take and also the mileage. He didn't do anything but drive and turn where I told him to. Was that fun! I sat with a map in my lap and told him to turn south or southeast or some other direction. We made seven stops and drove over five hundred miles round trip. I'm figuring now what his oil cost and also the wear and tear on the truck -- he calls it depreciation -- so we'll know how much we made.

I even write out all the bills and send letters to the farmers about what their pigs and beef cattle brought at the stock yards. I only made three mistakes in my letters last time, my aunt said -- all commas. She's been through high school and reads them over. I wish I could write school themes that way. The last one I had to write was on, "What a Daffodil Thinks of Spring," and I just couldn't get going.

I don't do very well in school in arithmetic either. Seems I just can't keep my mind on the problems. We had one the other day like this:

If a 57 foot telephone pole falls across a cement highway so that 17 $\frac{3}{6}$ feet extend from one side and 14 $\frac{9}{7}$ feet from the other, how wide is the highway?

That seemed to me like an awfully silly way to get the width of a highway. I didn't even try to answer it because it didn't say whether the pole had fallen straight across or not.

Even in shop I don't get very good grades. All of us kids made a broom holder and a bookend this term and mine were sloppy. I just couldn't get interested. Mom doesn't use a broom anymore with her new vacuum cleaner and all our books are in the bookcase with glass doors in the parlor. Anyway, I wanted to make an end gate for my uncle's trailer but the shop teacher said that meant using metal and wood both and I'd have to learn how to work with wood first. I didn't see why but I kept still and made a tie rack at school and the tail gate after school at my uncle's garage. He said I saved him \$10.

Civics is hard for me, too. I've been staying after school trying to learn the "Articles of Confederation" for almost a week because the teacher said we couldn't be good citizens unless we did. I really tried, because I want to be a good citizen. I did hate to stay after school, though, because of a bunch of us boys from the south end of town have been cleaning up the old lot across from Taylor's Machine Shop to make a playground out of it for the little kids from the

Methodist home. I made the jungle gym from old pipe and the guys made me Grand Mogul to keep the playground going. We raised enough money collecting scrap this month to build a wire fence clear around the lot.

Dad says I can quit school when I'm fifteen and I'm sort of anxious to because there are a lot of things I want to learn how to do and as my uncle says, I'm not getting any younger.

Childhood Education, Journal of the Association for Childhood Education, January, 1944.

ANSWER THE FOLLOWING ACCORDING TO EMPLOYMENT STATUS

EMPLOYED

1. I work for:

Employer
at _____
City State
as _____
Job Title

3. My hourly rate is approximately:

- ☐ \$1.60 or less
☐ \$1.60 to \$2.00
☐ \$2.00 to \$2.50
☐ \$2.50 to \$3.00
☐ \$3.00 or more

2. My employment is:

- ☐ Full-Time ☐ Part-Time

My work is:

- ☐ Related ☐ Not related to the training
I received.

UNEMPLOYED

Unemployed

Military

1. ☐ I am available for employment.
☐ I am not available for employment.
2. ☐ I am attending school.
☐ I am not attending school.

3. ☐ I am in the Military Service
My military assignment is:
☐ Related
☐ Not related to the training
I received.

HAPPY BIRTHDAY

*You entered our school to learn a trade;
You obtained the skills and had it made.*

*You've been out now, for a little while;
And we'd like to know if now you smile.*

*As a result of the training you did receive;
Is your paycheck bigger, as we like to believe?*

*Is employment better? Have you made it pay?
Will you tell us about it without delay?*

*Please complete and return this form, Okay?
And may you have a Happy Birthday!*

NAME _____ DATE _____

To evaluate and improve our training programs, we need and would appreciate your help. Please, answer the set of questions that apply to you.

Thank You

Answer ONLY if EMPLOYED

☐ Full Time ☐ Part Time

1. Since contacted in October 1970 I have:
☐ Not changed employer or job title.

☐ Not changed employer, but have changed job title.

New Job Title

☐ Changed employers _____ time(s).
How Many

Present Employer's Name

City, State, Zip

Payroll Job Title

2. After becoming employed, I received a pay raise.
Within

☐ 1 month . _____ per hour
☐ 6 months . _____ per week
☐ 12 months . _____ per month
☐ Over 12 months . _____ per year

3. I feel the training received at your school has been helpful to my employment and/or advancement in my job.
☐ yes ☐ no

4. I am currently receiving (or have had) additional training.

☐ yes ☐ no
☐ In an Area ☐ Plan to in
School near future
☐ By Employer
☐ Other Facility

5. Additional Comments: _____

Answer ONLY if UNEMPLOYED

1. My last employer since leaving school was:

Employer Name Date left

City, State, Zip

2. I am currently seeking employment
☐ yes ☐ no

3. I feel the training received at your school was helpful in my past employment.
☐ yes ☐ no

4. I am currently continuing my education.
☐ yes ☐ no

☐ In an Area ☐ I have had
School additional
training

☐ Other Facility ☐ I plan to
take
additional
training

SELECTED JOB DESCRIPTIONS

COMPUTER PROGRAMMER--SENIOR

CAPABLE OF GENERATING AND MAINTAINING SOPHISTICATED OPERATING SYSTEMS PROGRAMS. HAS THOROUGH KNOWLEDGE OF BOTH HARDWARE AND SOFTWARE SYSTEMS. IS CAPABLE OF WRITING USER ROUTINES TO MODIFY OR EXTEND CAPABILITIES OF STANDARD PROGRAMMING SYSTEMS. MUST BE SELF-SUFFICIENT IN ALL ASPECTS OF JOB PERFORMANCE. DIRECTS OTHERS IN PERFORMANCE OF THEIR WORK. MUST HAVE DEMONSTRATED OUTSTANDING PERFORMANCE AS A COMPUTER PROGRAMMER--ADVANCED.

COMPUTER PROGRAMMER--ADVANCED

CAPABLE OF DEVELOPING AND IMPLEMENTING SOUND COMPUTER-BASED APPLICATIONS FOR ALL DEPARTMENTS WITHIN THE ORGANIZATIONS. CAPABLE OF MAINTAINING EXISTING COMPUTER PROGRAMS. HAS THOROUGH KNOWLEDGE OF PROGRAMMING SYSTEMS AVAILABLE FOR CURRENTLY INSTALLED SYSTEMS. MUST BE SELF-SUFFICIENT IN ALL ASPECTS OF JOB PERFORMANCE. OCCASIONALLY DIRECTS OTHERS IN PERFORMANCE OF THEIR WORK. MUST HAVE DEMONSTRATED OUTSTANDING PERFORMANCE AS A COMPUTER PROGRAMMER--EXPERIENCED OR COMPUTER PROGRAMMER--COLLEGE, TECHNICAL.

COMPUTER PROGRAMMER--EXPERIENCED

MUST HAVE DEMONSTRATED ABILITY IN PREPARING PROGRAMS, FLOWCHARTS, DOCUMENTATION AND OPERATOR INSTRUCTIONS FOR A MAJOR APPLICATION. MUST HAVE CONVERTED AND IMPLEMENTED A MAJOR APPLICATION SUCCESSFULLY. HAS DEMONSTRATED ABILITY TO WORK EFFECTIVELY WITH ALL LEVELS OF PERSONNEL. GENERALLY WORKS ON A SELF-SUFFICIENT BASIS WITH OCCASIONAL GUIDANCE AND ASSISTANCE FROM MORE SENIOR AND EXPERIENCED PROGRAMMERS. MUST HAVE DEMONSTRATED SATISFACTORY PERFORMANCE AS A BEGINNING PROGRAMMER IN ANY AVAILABLE JOB CATEGORY.

COMPUTER PROGRAMMER--BEGINNING, COLLEGE, TECHNICAL

MUST HAVE BS OR BA IN MATHEMATICS, STATISTICS, ECONOMIC ANALYSIS, INDUSTRIAL ENGINEERING OR RELATED DEGREES. MUST SCORE 60 OR ABOVE ON THE IBM PROGRAMMING APTITUDE TEST. MUST BE CAPABLE OF PROGRESSING IN AT LEAST ONE AREA OF THE OPERATION.

COMPUTER PROGRAMMER--BEGINNING, COLLEGE, NON-TECHNICAL

MUST HAVE BS OR BA IN NON-TECHNICAL COURSE OR STUDY, PREFERABLY BUSINESS, MANAGEMENT, FINANCE, MONEY AND BANKING OR SUCH RELATED DEGREE & MUST SCORE 60 OR ABOVE ON IBM PROGRAMMING APTITUDE TEST. MUST BE CAPABLE OF PROGRESSING IN AT LEAST ONE AREA OF THE OPERATION.

COMPUTER PROGRAMMER--BEGINNING, NON-COLLEGE, TRAINED

HAS COMPLETED A RECOGNIZED COURSE OF COMPUTER INSTRUCTION THAT INCLUDES PROGRAMMING, FLOWCHARTING, DOCUMENTATION, JOB TIMING, BASIC PROCEDURES AND CONSOLE OPERATION ON SYSTEM WITH CPU, READER, PUNCH, PRINTER, MAGNETIC TAPE AND/OR MAGNETIC DISK. HAS SCORED 60 OR ABOVE ON THE IBM PROGRAMMER APTITUDE TEST.

OPERATIONS SHIFT SUPERVISOR

SUPERVISES, TRAINS AND DIRECTS ADVANCED AND BEGINNING COMPUTER OPERATORS IN THE PERFORMANCE OF THEIR WORK. CAPABLE OF OPERATING ALL INSTALLED COMPUTER EQUIPMENT ON ALL DATA PROCESSING JOBS. ASSURES THAT ALL WORK AVAILABLE IS PROCESSED ON AN EFFICIENT AND TIMELY SCHEDULE. ASSURES THAT ALL COMPLETED WORK IS PROPERLY BALANCED TO CONTROLS AND PROPERLY DISTRIBUTED TO SCHEDULED RECIPIENTS. ASSURES THAT ALL EQUIPMENT IS IN PROPER OPERATING CONDITION.

COMPUTER OPERATOR--ADVANCED

CAPABLE OF OPERATING ALL INSTALLED COMPUTER EQUIPMENT ON ALL DATA PROCESSING JOBS. WORKS ON A SELF-DIRECTED BASIS. ASSUMES FULL RESPONSIBILITY FOR ASSIGNED OPERATIONS. RESOLVES ALL PROBLEMS RELATED TO HIS WORK. OCCASIONALLY DIRECTS THE WORK AND TRAINING OF LESS EXPERIENCED OPERATORS AS DIRECTED BY THE SHIFT SUPERVISOR.

COMPUTER OPERATOR--BEGINNING

HAS EXPRESSED AN INTEREST IN THIS TYPE OF WORK. HAS SCORED 50 OR ABOVE ON THE IBM PROGRAMMER APTITUDE TEST. PREFERABLY HAS TRAINING OR EXPERIENCE OR COMPUTER EQUIPMENT OR RELATED EQUIPMENT.

SYSTEM DESIGN ANALYST

POSSESSES WIDE BACKGROUND OF BUSINESS TRAINING OR EXPERIENCE IN MOST MAJOR BUSINESS APPLICATIONS. HAS ADVANCED KNOWLEDGE OF ACCOUNTING AND/OR DATA PROCESSING ACCOUNTING APPLICATIONS. IS CAPABLE OF DOCUMENTING EXISTING SYSTEM, ANALYZING SYSTEM REQUIREMENTS AND DESIGNING NEW OR REVISED SYSTEM TO BEST MEET THE REQUIREMENTS. MUST BE SELF-SUFFICIENT IN ALL ASPECTS OF JOB PERFORMANCE. DIRECTS THE ACTIVITIES OF OTHERS IN DATA GATHERING, ANALYSIS PREPARATION AND IMPLEMENTATION OF NEW OR REVISED SYSTEM. CONSULTS WITH KEY MANAGEMENT PEOPLE TO DETERMINE FEASIBILITY OF NEW PROJECTS.

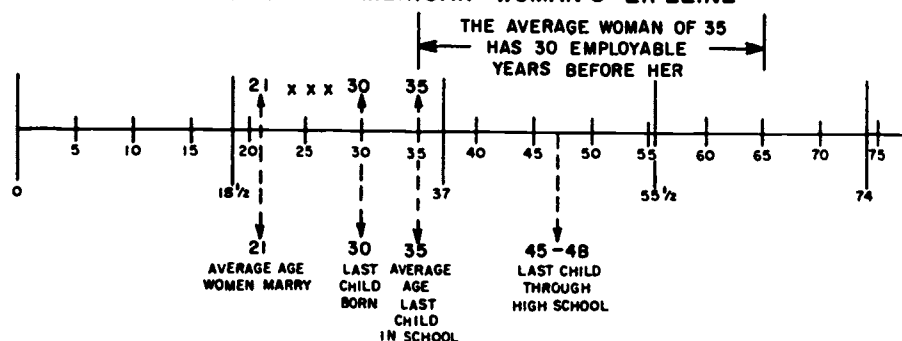

175 *Planning Your Lifeline*

The SPAN PLAN Chart was devised by the office of the Dean of Women at Purdue University to assist women students to think seriously about their long-term plans and to diagram on a Lifeline Chart what she would like her own life pattern to be in terms of education, career, marriage and family. Until recently, "...and she was married and lived happily ever afterward" has signaled the accomplishment of a woman's life goals and the end of any necessity to plan further. From that point, somewhere in her early twenties, she just "went along" with whatever came up. But the patterns of women's lives have been changing.

This chart can help YOU make education, marriage and career plans for your full lifespan--all 74 years of it. How does your anticipated lifeline compare with that of the average American woman today?

SPAN PLAN CHART

AN AVERAGE AMERICAN WOMAN'S LIFELINE

TODAY: The life expectancy of a girl born in 1964 is 74 years; in 1920 it was 55 years;
9 out of 10 girls will work sometime during their lives; they are likely to work at least 25 years outside their home;
Over 5 million students are enrolled in American colleges and universities; 2,621,000, or 40%, are women;
In 1968, 42% of all women were in the labor force; in 1920 only 23% were working

NEW PATTERNS OF WOMEN'S LIVES: THE AVERAGE AMERICAN WOMAN IN 1970

LIFE PATTERNS OF MODERN WOMEN INCLUDE:

School
Work and/or Marriage
Raising a family (and increasingly continuing to work by choice or necessity)
Return to work when youngest child is in school
(This Span Plan Chart information is provided by courtesy of the Office of the Dean of Women, Purdue University, Lafayette, Indiana 47907.)

THE SIGNIFICANT FACTS

21 ... Average age women marry (about half of today's women are married by age 21)
3.3... Average number of children
30 ... Average age last child born
35 ... Average age last child in school
45-48. Last child through high school
Average woman worker is age 39 and married
30 million women (2 out of 5 workers) are in labor force
3 out of 5 working women are married and living with their husbands
Prediction is made that by 1980, 36 million women will be in the labor force

WOMEN'S BUREAU
WASHINGTON, D.C. 20210

PROFILE OF THE WOMAN WORKER
50 Years of Progress

NOW

1980

AGE

39 years old.

28 years old.

MARITAL STATUS

Married and living with her husband.

Single.

OCCUPATION

Most likely to be a clerical worker.

Most likely to be a factory worker
or other operative.

Many other women in service work
outside the home, factory or
other operative work, and pro-
fessional or technical work.

Other large numbers of women in
clerical, private household,
and farm work.

About 500 individual occupations
open to her.

Occupational choice extremely limited.

EDUCATIONAL ATTAINMENT

High school graduate with some col-
lege or post-secondary-school
education.

Only 1 out of 5 17-year-olds in
the population a high school
graduate.

LABOR FORCE PARTICIPATION

Almost half (49 percent) of all
women 18 to 64 years of age in
the labor force.

Less than one-fourth (23 percent) of
all women 20 to 64 years of age
in the labor force.

Most apt to be working at age 20 to
24 (57 percent).

Most apt to be working at age 20 to
24 (38 percent).

Labor force participation rate drop-
ping at age 25 and rising again
at age 35 to a second peak of 54
percent at age 45 to 54.

Participation rate dropping at age
25, decreasing steadily, and only
18 percent at age 45 to 54.

Can expect to work 24 to 31 more years
at age 35.

Less than 1 out of every 5 (18 percent)
women 35 to 64 years of age in the
labor force.

AN ASSESSMENT OF WISCONSIN'S PROFESSIONAL
PERSONNEL DEVELOPMENT PROGRAM FOR VOCATIONAL
EDUCATION.

WISCONSIN UNIV., MADISON. DEPT. OF
EDUCATIONAL ADMINISTRATION.
MF AVAILABLE IN VT-ERIC SET.
PUB DATE - 71 75P.

DESCRIPTORS - *VOCATIONAL EDUCATION;
*PROFESSIONAL PERSONNEL; *MANPOWER
DEVELOPMENT; *PROGRAM EVALUATION; *TEACHER
EDUCATION; ENROLLMENT PROJECTIONS; MANPOWER
NEEDS; TABLES (DATA); CAREER EDUCATION
IDENTIFIERS - WISCONSIN

ABSTRACT - PRESENTED IN THIS REPORT IS A
DISCUSSION OF THE NEED FOR THE PROFESSIONAL
DEVELOPMENT OF VOCATIONAL EDUCATION TEACHERS.
IN ESTABLISHING THIS NEED FOR TEACHER
EDUCATION PROGRAMS, MENTION IS MADE OF NEW
STAFFING AND SCHEDULING ARRANGEMENTS, THE
EFFECT OF CHANGING TECHNOLOGY ON TEACHER
COMPETENCY, AND THE PREPARATION OF TEACHERS
FOR STUDENTS WITH SPECIAL NEEDS. THE REPORT
ALSO GIVES SPECIAL ATTENTION TO MANPOWER AND
ENROLLMENT PROJECTIONS, PROFESSIONAL
PERSONNEL REQUIREMENTS AND SOURCES, AND STATE
PLAN PROVISIONS FOR PERSONNEL DEVELOPMENT.
AMONG THE CONCLUSIONS OF THIS REPORT ARE: (1)
EVIDENCE INDICATES THAT THERE WILL BE A
CONTINUING DEMAND FOR VOCATIONAL TEACHERS AT
BOTH THE POST-SECONDARY AND SECONDARY LEVELS,
(2) THE PRACTICE OF RECRUITING POST-SECONDARY
TEACHERS FROM BUSINESS AND INDUSTRY IS
APPROPRIATE AND SHOULD CONTINUE, AND (3) THE
INTERNSHIP PROVIDED THROUGH THE EDUCATION
PROFESSIONS DEVELOPMENT ACT FUNDS IS HIGHLY
COMMENDABLE. A MAJOR RECOMMENDATION IS THAT
PRESERVICE PROGRAMS SHOULD CONTINUE TO BE
DEVELOPED WITH PARTICULAR EMPHASIS ON WAYS OF
PROVIDING TEACHERS FOR NEW AND EXPANDING
OCCUPATIONAL AREAS. (JS)

STATE ADVISORY COUNCIL

Name	Category
JOHN N. KRAMER, Chairman Fennimore, Wisconsin	Representative of local educational agency.
MRS. WILLIAM A. NIELSEN, Vice Chairman West Bend, Wisconsin	Representative of School Boards.
FREDERICK BRONSON Milwaukee, Wisconsin	Representing state industrial and economic development agency.
WARREN BROWN Hartland, Wisconsin	Familiar with vocational needs and problems of management and labor.
MISS KATHRYN T. GILL Madison, Wisconsin	Person having special knowledge and experience who is not involved in administration of state or local vocational program.
MRS. EDWARD HAERTER New Berlin, Wisconsin	Representative of general public, knowledgeable about the poor and disadvantaged.
GEORGE HALL Green Bay, Wisconsin	Familiar with vocational needs and problems of management and labor.
RAYMOND O. JONDAHL Racine, Wisconsin	Familiar with vocational needs and problems of management and labor.
EDWIN KEHL Madison, Wisconsin	Representative of manpower and vocational education agencies in state and CAMPS.
NORMAN P. MITBY Madison, Wisconsin	Representative of community and junior colleges.
JOSEPH PELLEGRIN Germantown, Wisconsin	Familiar with vocational education programs including comprehensive secondary schools.
C. D. REJAH Madison, Wisconsin	Familiar with administration of state and local vocation programs.
DR. ROBERT RUDIGER Menomonie, Wisconsin	Representative of community and junior colleges.
KEITH STOEHR Kenosha, Wisconsin	Representative of manpower and vocational agencies in state and CAMPS.
KENNETH SVEE Madison, Wisconsin	Person with special knowledge with respect to special educational needs of physically and mentally handicapped.
ROGER WAUKAU Neopit, Wisconsin	Representing school systems with large concentration of academically, socially, economically, and culturally disadvantaged students.
DR. BERNARD WEISS Milwaukee, Wisconsin	Representing school systems with large concentration of academically, socially, economically, and culturally disadvantaged students.

PREFACE

The challenge of preparing professional personnel for vocational education is perhaps greater at this time than at any other point in history. This fact grows out of the increasing expectations of vocational and technical education. Vocational educators can no longer rest with the mission of the past in which they were charged with providing occupational training in a relatively few occupational areas. Rather, they must accept the mission of the present day which spells out the need to prepare people for all occupations of less than baccalaureate level and further to serve the occupational education needs of all individuals. In addition, the cry is being heard to bring about changes in the whole educational system to make the curriculum more relevant to the occupational world where most individuals will of necessity have to find success in order to become economically sufficient. This suggests also a more adequate program of guidance and career orientation in order that both youth and adults will be better able to make realistic career choices.

These challenges suggest a system for preparing professional personnel which must be broader in scope than the system of the past, both in terms of occupational areas and of people to be served. It must be more flexible in that it should make provision for easy assimilation of personnel from the professions and from business and industry into the system.

The writer wishes to acknowledge the complete cooperation received from the Department of Public Instruction, the State Board of Vocational

and Technical Education, the Institutions of Higher Education and local vocational education personnel in providing data. Also, recognition should be given to Professor James Hoeh of the Department of Educational Administration and several graduate assistants who participated in various phases of data collection.

CHAPTER I

INTRODUCTION¹

The adequate training of teachers for vocational education was seen as imperative to the success of vocational education programs by early leaders in the field. Although many accomplishments can be identified in contemporary vocational education programs, the problem of providing adequately trained teachers and other professional personnel remains among the most critical areas of consideration in the expansion of vocational and technical programs.

The problem has become more complex as the role of vocational education has been expanded. Early programs of vocational education, encouraged by the Smith-Hughes Act of 1917, were related to agriculture, home economics, and trade and industrial occupations. The role of vocational education was gradually expanded by succeeding federal legislation until the Vocational Education Act of 1963, which provided that training be made available for all occupations not requiring a baccalaureate degree and emphasized serving the occupational educational needs of all individuals. This emphasis implies the provision of a broader range of programs in terms of occupations and in terms of levels of instruction in order to accommodate the broad range of abilities and interests of youth and adults.

The Vocational Education Amendments of 1968 provided resources for a great expansion in vocational and technical programs and earmarked funds

¹For this introduction the author has drawn heavily from Merle E. Strong, "Training of Teachers," THE ENCYCLOPEDIA OF EDUCATION, 1971, Volume 9, pp. 480-486.

for the expansion of programs for particular groups such as the disadvantaged and the handicapped (until recently these groups were not considered a responsibility of vocational education). Legislation has also placed emphasis on several other program dimensions, including the occupational aspects of guidance and counseling, orientation to the world of work, occupation exploration, cooperative education, work-study programs, job placement, and follow-up.

It should be pointed out that the problem of providing vocational education teachers prior to 1965 was related primarily to the post-secondary level, since prior to the Vocational Education Act of 1963 little emphasis was placed on vocational education at the secondary level.

In response to the need for a more sophisticated labor force owing to expanding technology, the growth of vocational and technical programs at the post-high-school level, particularly in junior and community colleges, has been phenomenal. This growth will continue as the job market continues to require increasing numbers of the labor force to have training at this higher level. Vocational programs have also continued to serve large numbers of adults in need of retraining. This need has been magnified by the introduction of new materials, methods, and equipment into the job market.

The challenge of providing adequately trained teachers for vocational and technical education courses is very great because of the variety of occupations, levels, and types of institutions in which programs are offered and because of the range of abilities and ages of individuals to be served. The problem is compounded by the fact that teacher education programs of the traditional type have not always been appropriate for the kinds of teachers needed in vocational education.

Responsibility of State Boards

The basic vocational education legislation, the Smith-Hughes Act of 1917, which appropriated one million dollars annually for vocational teacher education is important not only as historical background but also because the act established a philosophy and a pattern of operation in vocational education and vocational teacher education which has persisted through the years. Each succeeding vocational education act up to and including the Vocational Education Amendments of 1968 reflected three basic principles that first appeared in the Smith-Hughes Act: first, that the state board must develop a plan to be approved at the federal level, a plan indicating the state's scheme for providing vocational education and including information on instructional personnel; second, that responsibility for the preparation of teachers and other vocational education personnel and the establishment of minimum qualifications are responsibilities of the state board; and third, that federal funds under each of the acts can be spent for teacher-training purposes.

Nature of Training

One of the strengths of vocational education has been its ability to keep open numerous sources of teachers. Full-time teachers of agriculture, home economics, and office occupations (business education) are prepared through baccalaureate programs. Full-time teachers in trade and industrial education, in contrast, are often recruited from the occupation for which training is to be given. The selection criteria for these teachers emphasize competence and success in the occupation rather than the completion of a degree. Teachers for health occupations usually are recruited from the occupations, in which case they have met the degree or other training

requirements of the occupations and hold licenses if such are required. In the case of teachers for highly technical occupations, emphasis is again placed on their success in the occupation. Typically, those recruited have had formal training appropriate for success in their field. This training might include a degree in engineering or an associate degree in a technical field. Often, however, these teachers have not had any courses related to learning theory or teaching methodology.

The challenge of teacher training is magnified by the large number of part-time teachers required, particularly in adult programs, which comprise as much as 50 percent of the vocational education enrollment. In addition, it has been the practice to staff adult programs with specialists recruited from business, industry, agriculture, health, and other related fields. Except for those who enter teaching with a degree in education, the initial thrust of teacher training in vocational education is to provide teaching and other educational skills necessary to meet certification requirements and improve teaching efficiency.

In addition to recruiting teachers from many sources, a second important dimension of vocational teacher education is the upgrading of teachers in terms of the content and skills related to the particular occupations they are teaching. This dimension has become increasingly important as the rate of change in occupations reflects the accelerated rate of technological change.

The general education needs of regular teachers are also important for vocational teachers. Although many vocational teachers who are recruited lack baccalaureate or higher degrees, they are encouraged to complete degrees. As a result, the number of degrees held by vocational teachers who have been in the field a number of years compares favorably with those of teachers in other fields.

Vocational Categories

Teachers of vocational education are usually identified by the service area of their competency--for example, agriculture, distributive occupations, or health occupations. In the writing and implementation of the Smith-Hughes Act of 1917, the early leaders in vocational education sensed an inadequacy in the structure and methods of the training programs of that day and emphasized several categories of vocational teachers, while the states developed certification requirements by service area. Although modifications have been made, certification requirements and teacher education programs are for the most part identified according to a service category.

Agricultural Occupations

Traditionally, all teachers in agriculture have come through the teacher education programs provided in the land-grant colleges. These programs are located within colleges or departments of agriculture and have strong ties to colleges or departments of education. Prior to the Vocational Education Act of 1963 instruction in agriculture was directed toward preparing youth and adults for production agriculture or toward upgrading their skills in this area. Typically, farm boys who had taken agriculture programs in high school were recruited for these programs.

The Vocational Education Act of 1963 brought new challenges to traditional programs. The task of preparing instructional personnel became more complicated than under previous legislation because the act broadened the responsibility to provide training to all persons, including the disadvantaged and handicapped, and for all occupations not considered to be professional. In addition to curriculum changes in college programs, opportunities are now being provided for cooperative experiences in business and industry.

Business and Office Occupations

Programs in the area of business and office occupations became eligible for federal support under the Vocational Education Act of 1963. The system of teacher education in business education at this time was similar to that in general education. Although at present these teachers continue to teach courses that enable youth to become employable, teacher education programs need to expand in order to provide instruction in a broader range of office occupations, including those related to data processing. Several states, in addition to making significant curriculum changes in teacher education programs, have made provisions for recruiting teachers from the business world, particularly for such programs as data processing in post-secondary institutions. Significant efforts have also been made in providing in-service activities for business-education teachers to upgrade their office-related skills.

Distributive Occupations

The Vocational Education Act of 1963 broadened the states' authority to provide preparatory programs in distributive education in addition to the cooperative programs between the schools and distributive businesses (both wholesale and retail) which had been provided previously. This act has made possible and encouraged an expansion in the size and number of distributive teacher education programs. In general, however, these programs appear to be understaffed and underdeveloped to meet the need for teachers in a field with a rapidly expanding labor force. Full-time teachers usually have been provided through baccalaureate programs, many of which are closely allied to departments of commerce in colleges. Part-time teachers have often been recruited from the business world.

Home Economics Occupations

The home economics teacher is prepared through the baccalaureate route. Prior to the Vocational Education Act of 1963, home economics programs were directed at developing students' abilities and understanding in the area of home and family life and at helping them to live as informed citizens. The 1963 act provided that new funds could be used only for employment training in occupations requiring knowledge and skills related to home economics (such jobs as waitress, homemaker aide, child-care aide, and hotel and motel keeper). It was the intent that these programs be added to rather than replace the traditional home economics program. The development of new programs has undoubtedly been hampered by the lack of teachers with appropriate experience and training to develop and teach courses in occupations related to home economics.

Health Occupations

Teacher education for the health occupations was provided in the past primarily as a part of trade and industrial teacher education. Potential teachers were recruited from the various health occupations--for example, registered nurses for practical nurse training programs and dental hygienists and dental assistants for dental assistance programs. The Health Amendments Act of 1956 provided for expanded training in health occupations. These amendments were administered as Title III of the George-Barden Act of 1946, and succeeding vocational education acts have given rise to additional program expansions. Several states are developing teacher education programs specifically geared to the needs of the health occupation teacher.

Technical Occupations

Technical education programs are provided mainly at the post-high school level in junior and community colleges, technical institutes, and other post-secondary institutions. In order to staff these programs, it has been necessary to compete directly with business and industry. Nearly all technical areas of occupational preparation are becoming more specialized, with workers in business and industry requiring training in depth. The challenge to educators is to recruit and retain teachers with depth, breadth, and currency of experience in the technology to be taught as well as with teaching skills. Such a challenge dictates close cooperation with business and industry.

The practice has been to recruit persons from business and industry who have demonstrated competence in the technology and to provide them with the teaching skills through in-service programs. However, this practice does not solve the problem of keeping these teachers current with the technology in their fields. Successful solutions to this problem have included short-term workshops and institutes, often in cooperation with an industry, trade, or professional association or supplier; university courses related to the technology; and return to business and industry for additional experience.

Trade and Industrial Occupations

The traditional approach to securing teachers in trade and industrial occupations has been to recruit skilled craftsmen and then to provide them with general education teaching skills on an in-service basis. One limitation of this method has been that teachers' salaries have not been competitive (particularly at the secondary school level) with the earnings

of well-qualified craftsmen. In addition, there has been increased concern on the part of many school administrators that a degree should be at least one of the qualifications for teaching. A number of approaches have been developed which attempt to recruit persons who have already developed some occupational competence into baccalaureate programs. The problem remains that if a person is well qualified in an occupational area, the school must still be competitive with industry to retain his services.

Implications of the 1968 Amendments

The Vocational Education Amendments of 1968 have been funded and have substantially increased support for vocational and technical education. The need to extend vocational and technical education opportunities exists in every state. It does not, therefore, seem unreasonable to expect that state and local resources will be made available far in excess of funds needed to meet the matching requirements of the Vocational Education Amendments of 1968. The Division of Vocational and Technical Education (U.S. Department . . . 1969) has predicted an enrollment of 14 million in vocational education programs by 1975, which is almost double the 1968 enrollment. This increase will require nearly a doubling of the number of professional personnel.

The task of preparing instructional personnel will be complicated by some of the new categories of personnel and programs identified in the act and by several other factors which will affect all areas of education. First among these other factors is education technology, which is developing at a rapid rate. Sophisticated equipment is already available that greatly increases learning efficiency. The real challenge to education is to identify and develop educational content appropriate to the many occupational areas and to program that content for use with appropriate instructional media.

Included in the newer media and methods is the expanded use of programmed material on an individual basis, which involves not only wider use of programmed texts but also the combination of these texts with other media, such as audiotapes, slides, and filmstrips. Electronic student-response systems will become more widely used, as will closed-circuit television. The computer has already been proved to be an appropriate tool for teaching and learning, and its extensive use should prove financially feasible by the end of the 1980's, if not sooner. The greatest potential limitation to its effective use may be the lack of capability to properly organize and adapt the content for use with this new media.

New staffing and scheduling arrangements will also affect the requirements for the training of educational personnel. The concept that all teaching personnel should be equally competent and the resulting practice of assigning classes of approximately equal size to each teacher is giving way to a differentiated staffing pattern, with teaching teams that include paraprofessionals. Students are being taught in groups of varying size, depending upon the content and media used.

Perhaps the greatest challenge to educators, particularly vocational educators, is keeping teachers abreast of the rapid changes in technology in their fields. New products, materials, equipment, and methods can make occupational skills partially obsolete unless ways are found to update experience.

The Vocational Education Amendments of 1968 identified several aspects either new to vocational and technical education or requiring expansion that will involve new dimensions in teacher preparation. Among these aspects is the provision of occupational guidance, orientation to the world of work, and exploratory occupational experiences at the elementary, middle school, junior high, and high school levels.

Another area of challenge for vocational teacher education is the preparation of teachers for students with special needs. Among such students are those with academic, socioeconomic, and physical handicaps. The serving of these students, until recently, was not necessarily considered as a part of the role of vocational education. The Vocational Education Amendments of 1968 allocated significant amounts of money for programs to serve these groups. It has been projected that by 1975 more than 4,000 teachers will be needed (in addition to those already teaching) with the necessary vocational competence and special training to work successfully with handicapped students (U.S. Department . . . 1969).

The act also emphasized the need to expand cooperative and work-study programs. This expansion will create the need for staffs with the knowledge and skills to coordinate programs with business and industry. The expansion of the school into the community to a greater degree than at present will certainly require new talents and working relationships.

Other aspects of the program envisioned by the Vocational Education Amendments of 1968 include expansion of programs in occupations related to home economics and consumer education. The amendments encouraged home economics educators to give greater consideration to social and cultural conditions and needs, especially in economically depressed areas. This direction will require new emphasis in teacher education programs in homemaking.

The 1968 amendments also stressed the need to serve youth in urban areas and made provision for residential demonstration schools. These residential schools are to be designed for those young people from central city areas and rural poverty areas who can best be served by being removed from their environment. The schools envisage a full range of health,

guidance, and counseling services in addition to providing occupational skills. Staffs for such schools need to have new and different talents than those required of the more traditional staffs.

Career Education

Recently the U.S. Office of Education has given substantial support to changing the focus of all education K-12 to make it more career-oriented, the rationale being that our present college-oriented curriculum fails to meet the needs of a large majority of students. This movement goes far beyond the scope of what was traditionally called vocational education; however, there seems little doubt that vocational educators should and will have the opportunity and the responsibility to provide assistance and direction for this new program.

The program envisions including concepts of work and occupations beginning with the elementary school level. These concepts would be built upon in the upper elementary levels with exploratory experience being included at the middle and junior high school levels. At the high school level further exploratory experience would be provided with the opportunity for education in preparation for a specific job or cluster of jobs during the last year or two in school.

The overall program objective might be thought of as "providing preparation for each individual for a satisfactory next step into the work world and/or further education." Substantial federal funds are being directed toward developing and demonstrating these types of programs. It is too early to tell what the impact will be on Wisconsin's program or specifically the demands which will be placed on teacher education as a result of this new emphasis.

CHAPTER II

MANPOWER AND ENROLLMENT PROJECTIONS

It is not the purpose of this report to develop new manpower projections or to even treat existing projections in any detail. However, in order to adequately plan vocational-technical training programs and estimate the financial, facility, and personnel requirements to meet future manpower needs, projections are needed to identify changing manpower requirements. The importance of the best possible projections cannot be overemphasized. To the extent that vocational education accurately reflects the changing character of manpower needs, imbalances between manpower requirements and labor supply can be reduced, the productivity of the economy and the earning power of workers enhanced, and the structural unemployment minimized.

Manpower Requirements

The vocational and technical education systems in Wisconsin are dedicated to meeting both the needs of individuals and the needs of employers. Theoretically, these two objectives should be quite compatible since for most individuals a job is essential; however, it is often necessary to meet the vocational education needs of some individuals in geographical areas in which employment may be quite limited. To not do this would contribute to individuals either remaining in poverty at home or lacking the skill to compete for jobs in relocating in an area in which employment is available.

The estimating of labor market requirements at best is a very difficult task because of changes in economic conditions, the changes in technology and the flexibility in our manpower requirements which leads to changes in job descriptions and substitutions of labor. In spite of these problems estimates must be attempted as a basis for program development.

Table 1 is presented to depict the twenty largest projected growth industries in Wisconsin from 1968-1975. This table clearly shows that the greatest projected growth will occur in health, service and government industries. These 20 industries are projected to generate a need for an additional 92,300 workers during the seven year interval between 1968 and 1975. Staff of the State Board of Vocational, Technical and Adult Education have attempted to translate labor force requirements to educational requirements which are shown in Table 2. It is obvious that such a translation can provide only a general picture of projected training needs because within each category are included many occupations.

Enrollment Projections

It is quite obvious that teacher and other professional personnel needs for Wisconsin's vocational education programs must be based on program projections. The manpower demand is only one factor that must be considered in making realistic enrollment projections. Among other considerations is the size of the population to be served, the expected demand and the financial and other resources that are anticipated to be available.

TABLE 1

**TWENTY LARGEST PROJECTED GROWTH INDUSTRIES
1968-1975**

RANK	INDUSTRY	PROJECTED 1968-1975 GROWTH

* Reduction of manpower demand.

** Fifty percent of secondary and 90% of post-secondary output enter labor market following graduation.

Source: 1972-1976 State Plan For Vocational Education In Wisconsin

Table 3 provides general population characteristics for Wisconsin. These were considered by the State Board in making enrollment projections. It is of interest to note the ratio of urban to rural population which has very definite implications for program development. Also, shown is the numbers in minority groups. While the percentages are small in comparison to other states, they should be recognized in program planning in terms of special programs or services which can be rendered.

Table 4 provides projections in program enrollments for Wisconsin through 1976. The growth expected is sizeable, for example at the secondary level an increase from 54,240 in 1972 to 71,100 in 1976.

It is also of interest to look at the projected growth by service category at both the post-secondary and secondary levels.

Table 5 provides projections for special types of programs and services. The personnel needs for these programs are often more challenging to acquire than for the more traditional kinds of programs. For example, very little is being done to prepare persons to provide salable skills to the disadvantaged or handicapped.

A dramatic growth in guidance programs is projected. This may represent only a fraction of the need, however, if extensive development of the career education concept discussed earlier should become broadly accepted.

Table 6 provides projections by degree programs. These projections show a growth of 22,000 students in the post-secondary system in a four year period. Past enrollment estimates have been on the conservative side. The writer would suggest that these figures may also prove to be conservative depending upon the ability of the vocational system to acquire the resources necessary to expand programs.

Summary

In this part of the report, labor force projections have been discussed briefly as a part of the rationale for increased program projections. Program projections as developed by the Department of Public Instruction and the State Board of Vocational, Technical Education have been shown, also. The next section will attempt to relate this information to professional personnel requirements.

CHAPTER III

PROFESSIONAL PERSONNEL REQUIREMENTS AND SOURCES

While a number of sources and estimates of professional personnel were identified and considered in the development of this report, only the projections completed recently by the State Board of Vocational, Technical and Adult Education are included. These projections are based on the most recent program projections cited earlier.

Table 7 provides projections by type of program and by occupational category for personnel at both the secondary and post-secondary levels. It should be noted that the columns do not add to the totals apparently because the total represents an unduplicated count.

It is noted that the number of secondary teachers is projected to increase by 469 by the year 1976. Likewise, post-secondary teachers will increase by 430 for a like period of time. The number of teachers of adults will increase by 695.

Table 8 provides information on the numbers of secondary teachers and new positions projected for 1976.

Table 9 provides similar information for post-secondary vocational teachers. It should be noted that the figures in Tables 8 and 9 do not include numbers of teachers needed for replacement.

Table 10 includes information and projections for adult education teachers. Practically all of these teachers are part-time teachers being recruited from business and industry or from other teaching positions to teach adult classes. The teacher education problem for this group is essentially one of inservice education.

TOTALS	2495	3060	565

One of the difficult problems in planning for a supply of vocational and technical teachers is the fact that it is difficult to predict the specific occupational area for which teachers will be needed. For example, in the category of health occupations, the projected needs not only may include instructors with nursing background but dental hygienists, medical laboratory assistants, etc. The range of specific occupational backgrounds required is even greater under the classification of trade and industry.

Another problem in predicting preservice teacher education needs is the fact that teachers for vocational and technical education are recruited from a number of sources other than directly from teacher education programs. This is highly desirable if programs are to reflect the needs of the occupation and employers.

Gibbs¹ in a 1969 study of post-secondary vocational and technical education, looked at sources of teachers. Table 11 lists the four most frequented sources of vocational teachers as identified by Gibbs. In rank order these sources were: persons employed in business and industry, general academic teachers and administrators in public school systems, students in teacher education programs in colleges, and teachers of vocational subjects in high schools.

TABLE 11
TEACHER SOURCES

Source	Number	Percent
Business and Industry	343	32.85
Student in teacher education program	164	15.71
Student in nonteacher education program	34	3.26
Teacher of vocational subject in high school	142	13.60
General academic teachers and administrators in public school	166	15.90
Teachers in another voc-tech system	24	2.30
Military personnel and civilians teaching therein	35	3.35
Teachers in college or junior college	50	4.79
Teacher, student or practicing nurse	57	5.46
Housewife or unemployed	29	2.78
TOTAL	1044	100.00

¹Jeffrey L. Gibbs, "The Education, Source and Recruitment of Wisconsin Vocational-Technical Teachers," (University of Wisconsin, Master's Thesis), 1969.

Gibbs classified those teachers who came from business and industry and found that 85 percent of them were from four industries: the manufacturing (41 percent), the service industry (24 percent), the wholesale industry and retail trade industry (11 percent) and the construction industry (9 percent).

Gibbs noted that vocational teachers recruited from business and industry had spent approximately nine years in their occupation prior to the time they entered teaching. It was found also that these teachers accepted slightly less money upon entering teaching. In total, 70 percent of the teachers indicated that they accepted the same or less monetary reward. This tendency was found to exist in all areas of vocational-technical education.

Gibbs discovered that teachers consistently have averaged approximately 34 years of age at the time of recruitment. Table 12 identifies recruitment age of vocational teachers by their source.

The relatively high average recruitment age indicates that almost all vocational teachers were engaged in other activities either after or during their schooling before entering the vocational system. This information substantiated one of Gibbs' earlier findings, that on the average, Wisconsin post-secondary vocational teachers have had ten years of experience directly related to their assignment.

Vocational teacher source by curriculum area was also analyzed by Gibbs as reported in Table 13. His analysis disclosed that teachers who came from business and industry usually came from the manufacturing, service, and wholesale-retail trade industry. There has been no apparent trend in recruiting teachers from other industries. From Table 13, it is evident that the most common source for trade and industrial teachers was business and industry (55 percent); business and office teachers

TABLE 12
AGE AT RECRUITMENT

were primarily obtained from business and industry (34.62 percent); home economics teachers were primarily obtained from two sources, business and industry plus high school vocational programs (21.74 percent respectively); most agriculture teachers were obtained from school vocational programs (54.55 percent); distributive education teachers were primarily obtained from business and industry (43.75 percent); the majority of health occupations teachers emanated from nursing (59.49 percent); technical teachers were primarily obtained from business and industry (48.51 percent); and the majority of general academic teachers were obtained from high schools (45.50 percent).

An additional finding expressed in Table 13 notes that business and industry supplied about 33 percent of Wisconsin's post-secondary

vocational-technical teachers. Both teacher education programs and high school academic programs supplied an additional 31 percent of these teachers. The fourth greatest contributor of teachers was vocational high school programs with 15 percent. Thus, these four sources accounted for approximately 77 percent of all vocational-technical teachers at the post-secondary level.

It is evident that because of the sources from which post-secondary teachers are recruited that it is difficult to relate needs directly to enrollments in pre-service programs. If one strongly believes that vocational programs should be closely tied to the needs of employers then it follows that it is highly desirable that a sizeable percentage of teachers be recruited directly from employment in the occupations for which they will be teaching.

Adequacy of Education

One section of this portion of the personnel study of post-secondary teachers focuses attention on: 1) an identification of the needs of teachers, 2) the adequacy of preservice training, and 3) the identification of inservice training priorities. The study team decided a questionnaire should be used to obtain the desired information.

The questionnaire design was patterned after one developed by Halfin and Courtney.² Items which comprise the "Staff Development Questionnaire" were obtained from the "Vocational Education Training Needs Study Instrument." The study population included a random selection

²Harold H. Halfin and E. Wayne Courtney, "Competencies of Vocational Teachers," unpublished report sponsored by the Board of Regents of Wisconsin State Universities, May 1970.

of teachers employed at post-secondary vocational-technical schools throughout Wisconsin. These teachers represented the following disciplines:

- a) Trade and Industrial Education
- b) Business Education
- c) Technical Education
- d) Health and Welfare
- e) Vocational Agriculture Education
- f) Distributive Education
- g) General Academic Subjects

A total of 185 questionnaires were mailed and, after a two-week period, a total of 74 (40 percent) of the questionnaires had been returned. Sixty-eight of the 74 returns were found usable and constituted the sample from which the analysis was made. Responses to questions I and II of the instrument were factor-analyzed to identify homogenous clusters. Of the 40 items used to describe proficiencies needed by vocational-technical teachers, 20 items obtained a mean score of 2.478 or better using a three point scale. Table 14 identifies mean scores for each of the 20 items.

A factor analysis of the 40-item questionnaire³ grouped the 20 statements identified in Table 14 into six factors. The first factor contained items 33, 12 and 29. These items emphasized the development of tests to measure achievement. They also emphasized the use of technical terms. Factor two included item 17 which indicated a need to relate the daily lesson plan to the course of study.

The third factor, consisting of eight statements, contained items 9, 11, 36, 29 and 23, each with a mean score greater than 2.478. Analysis

³For details of questionnaire, See Appendix A.

of these statements indicated a heavy emphasis placed on instructional materials and updating the course of study.

Items 38, 13 and 19 were also among those items listed in Table 14 and totaled 75 percent of the statements comprising factor forms. This factor suggested a need for proficiency in stimulating and motivating the student, thereby making his educational experiences more meaningful.

Factor five contained seven statements, five of which were listed in Table 14. Statement 3 suggested a needed proficiency in understanding the goals for vocational-technical education. The remaining statements 4, 5, 8 and 16 emphasized providing appropriate learning experiences by demonstrating skills used on the job and relating technological advances to laboratory instruction.

TABLE 14
MEAN SCORES OF RESPONDENTS DESCRIBING PROFICIENCIES NEEDED BY
VOCATIONAL-TECHNICAL TEACHERS, BY ITEM NUMBER
(N = 68)

Item Number	Mean Score	Item Number	Mean Score	Item Number	Mean Score	Item Number	Mean Score
3	2.687	11	2.716	19	2.836	32	2.507
4	2.896	12	2.557	20	2.612	33	2.597
5	2.851	13	2.716	23	2.582	36	2.791
8	2.582	16	2.806	24	2.836	37	3.478
9	2.746	17	2.582	29	2.612	38	2.776

The final factor included items 37, 20, and 32, which the reader will recall were: the teacher providing vocational guidance information, using tools and equipment found on the job, and breaking the job into its component parts for instructional purposes. This mixture may be attributed

to the grouping of statements which did not relate to the aforementioned factors.

Results of the factor analysis conducted for Part I of the "Staff Development Questionnaire" and designed to identify proficiencies needed by teachers indicated that teachers of vocational and technical subjects need considerable proficiency in the ability to:

- 1) Develop tests which measure achievement;
- 2) Relate the daily lesson plan to the course of study;
- 3) Prepare instructional materials and update the course of study;
- 4) Stimulate and motivate the student;
- 5) Provide appropriate learning experiences in relation to a particular wage earning occupation.

Part II of the "Staff Development Questionnaire" asked respondents to identify the extent to which their formal education provided the proficiency reflected in each of the 40 statements. A four point rating scale was employed which allowed each respondent the opportunity to select the one which most closely approximated his experiences.

Table 15 identifies the mean response for the 68 persons who returned a properly completed survey for each of the 40 statements which comprised the questionnaire. Employing a true interval of 3.50-4.50 for a response of slight, 4.50-5.50 for a response of moderate, and 5.50-6.50 for a response of considerable, one can easily interpret the table.

The mean scores of the respondents indicated moderate preparation through formal education for 38 of the 40 statements contained in the questionnaire. Two statements (4, 17) obtained a mean score higher than 5.50. Thus, respondents as a group, rated "provide appropriate classroom learning experiences" and "relate the daily lesson plan to the course

of study" as two areas in which they received considerable proficiency through a formal education. It can be concluded, based on the population which responded to this study, that these teachers of vocational-technical subjects received considerable benefit from their formal education in two "considerable proficiency" skills.

TABLE 15
MEAN SCORES OF RESPONDENTS DESCRIBING THE ADEQUACY
OF THEIR FORMAL EDUCATION BY ITEM NUMBER

Item Number	Mean Score	Item Number	Mean Score	Item Number	Mean Score	Item Number	Mean Score
1	4.824	11	5.132	21	5.015	31	4.853
2	4.735	12	5.176	22	5.5279	32	5.338
3	5.147	13	4.912	23	5.176	33	5.294
4	5.515	14	4.706	24	5.294	34	5.103
5	5.265	15	4.794	25	5.044	35	5.059
6	5.029	16	5.412	26	5.000	36	5.309
7	5.044	17	5.529	27	5.191	37	5.015
8	5.088	18	4.765	28	5.029	38	5.235
9	5.397	19	5.309	29	5.412	39	4.603
10	5.147	20	5.294	30	4.721	40	4.971

The recognition that proficiency relating to each of the 40 statements can not be provided by one source, i.e., institutions providing a formal education, led to Part III of the "Staff Development Questionnaire." Teachers who participated in the study reacted to each statement with a "yes" or "no" response when asked, "Should this proficiency be improved through staff development programs?"

An overwhelming response of "yes" was indicated for all 40 statements. Analysis of the write-in responses depicted a teacher interest in participating in staff development programs offered by industry.

Recognizing the needs for staff development, The Wisconsin Board of Vocational, Technical and Adult Education sponsored 32 programs which they listed in their "1970-71 Calendar of Called Conferences and Events."⁴ An additional 141 activities were listed in the "calendar" as events which would be held throughout the State between August 23, 1970 and August 27, 1971.

The third sheet of the questionnaire contained questions relating to the personal background of the respondents. Tabulated results are presented as Table 16. It is interesting to note that all except nine of the respondents indicated that they had earned a four year college degree. Also significant is the fact that 85 percent of the respondents felt that their occupational experience was of "considerable value" and not one respondent accorded it "slight" value. When questioned regarding the adequacy of state certification requirements for vocational education, 74 percent of the respondents stipulated that the existing guidelines were "about right" with 13 percent expressing concern about their leniency and 12 percent stating that they were too strict.

⁴ See Appendix B.

too lenient.....(9)

CHAPTER IV

STATE PLAN PROVISIONS FOR PERSONNEL DEVELOPMENT

The Wisconsin State Plan is limited in its detail as it relates to personnel development. This is undoubtedly due to the fact that no formal or financial arrangement exists between the State Board and teacher education institutions. Wisconsin is somewhat unique in the Nation in that the State Board does not support financially the ongoing vocational teacher education programs of any of the universities in a direct fashion. A practice in most states is to support teacher educators through a contractual arrangement in which a portion of the teacher educators' salary would be paid from vocational education funds. On the negative side of such practice is the question of whether these services should not be furnished by the universities without special financial assistance; also, the question whether appropriate controls can be exercised by the State Board staff.

Arguments in favor of the practice would suggest that the State Board can have more input into the curriculum and can secure necessary assistance in inservice educational programs if they are partially supported.

The present practice in Wisconsin is that the various universities make their major contribution through formal courses on campus or through extension while the major inservice task is carried out by the State Board and DPI staffs. In defense of university personnel they are limited usually in the amount of time they can devote to less formal or noncredit

enrollment activities since by practice their loads are determined and measured in terms of formal credit courses.

There is abundant evidence that the State Board and DPI staff have and are presently carrying out a substantial program of inservice work. The question that may arise, however, is whether an even more adequate job might be done by making universities greater partners in the inservice activity thus bringing additional manpower and expertise to the job. It would appear that this can be done only as a result of making financial resources available for this purpose.

Financing Staff Development

Graph 1, based on preliminary figures for FY 1970, offers a comparison of federal expenditures by selected states for teacher education or, as used in this study, staff development. As can be seen, Wisconsin's total of \$104,559 is substantially less than the neighboring states, several of which are less populous. The writer would hasten to suggest that these figures do not necessarily reflect the total effort in that districts invest money in inservice activities.

In an attempt to project a future commitment by the state to provide funds for staff development, Table 16 is presented. A projected total of \$212,800 for staff development represents .3% of the total anticipated funds for FY 1972. Even if the capital outlay figure of \$10,018,800 is subtracted from the total, the percent for staff development is increased only to .4%. Considering separately those funds from federal sources, staff development will account for \$106,400 or 1.4%. When the total of \$7,415,574 is reduced by the \$1,477,329 for construction,

Handicapped.	1,483,115		741,558		741,557	
Contracted Instruction	11,200		5,600		5,600	
Guidance and Counseling.	448,000		224,000		224,000	
Construction of Area Vocational Schools.	10,018,405		1,477,329		8,541,076	
Ancillary Services (Total)	2,060,800		1,030,400		1,030,400	
Administration and Supervision.	(1,803,200)		(901,600)		(901,600)	
Evaluation.	-		-		-	
Teacher Training.	(212,800)	.3%	(106,400)	1.4%	106,400	.18%
Research and Demonstration Projects	-		-		-	
Curriculum Development.	(44,800)		(22,400)		(22,400)	
Total	65,581,663		7,415,574		58,166,089	
Section 102(b) State Programs						
Disadvantaged.	452,530		452,530		--	

Note: Estimate of expenditures as projected in accordance with the policies and procedures in the State Plan.

this percent increases to 1.7%. The projections for state-local figures are even more revealing. Of the total of \$58,166,089 from these sources, only \$106,400 or .18% is earmarked for staff development and this percent increases only to .2% when construction costs are subtracted from the total.

A review of the figures presented in this section clearly emphasizes the fact that staff development programs have been accorded rather low priority in the State of Wisconsin by those professionals who are responsible for budget planning and control.

Professional Development Under Part F, Higher Education Act of 1965

At the time of the passage of the Vocational Amendments of 1968 by Congress, the Higher Education Act of 1965 contained provisions for funding professional development activities, however, it tended to exclude vocational and technical education personnel. The proposed vocational and technical education bill made provisions for professional development which were similar to those in operation administered by a Bureau in the U. S. Office of Education established for that purpose. This fact led to removing the special provisions for personnel development from the vocational education legislation and making it an amendment to the Higher Education Act of 1965. The legislative provision is identified as "Title II - Vocational Education Leadership and Professional Development Amendment of Higher Education Act of 1965." Part F - Section 553 provides for grants to conduct inservice activities for teachers, supervisors, coordinators and administrators.

The State Board of Vocational, Technical and Adult Education is to be commended in their efforts to develop a "Comprehensive Plan for Professional Development" which will serve, when approved by the U. S. Office, as a guide under which projects may be developed by "private business and industry, commercial enterprises, or other educational institutions."

For purposes of administration of this section, the State Board staff has identified a staff committee made up of membership from the State Board staff and the staff of DPI. Also, a higher education committee has been identified with representation from each of the universities. In addition, a committee has been formed with membership from each of the districts. In the case of the district representative, he also assumes responsibility for the staff development program in his district.

It is too early to evaluate the outcome of this effort, however, it gives promise of making a substantial contribution. The fact that the State Board has involved many individuals from across the State in developing the comprehensive plan is not only commendable but represents a leadership posture that may not have been in evidence prior to this time. The success of the effort, however, can be measured only by the success in getting projects approved by the U. S. Office of Education.

A list of problems has been identified. While in tentative form at this time, it seems appropriate to include them in this report as evidence of the effort being set forth and perhaps as being representative of possible future direction and efforts in personnel development.

IDENTIFIED PROBLEMS IN LEADERSHIP DEVELOPMENT

Problem - The rapid expansion of the post high school Vocational, Technical and Adult Education system in Wisconsin, through the development of a statewide system of area vocational districts, has created a serious problem in the development of educational leaders to staff the system at all levels of administrative responsibility. This normal problem of growth is further compounded into a greater difficulty when it is aggravated by the greater social demands, and managerial expertise which is required today to adequately administer an educational enterprise.

An additional concern is the fact that the system traditionally has been occupationally oriented, pursuit of advanced degrees on the part of its leaders has been the exception. There is some legitimate concern that for lack of these qualifications, leadership and policy working positions will be forfeited to educators without specific background, knowledge or interest in vocational education. It is therefore exceedingly urgent that persons concerned in this field qualify themselves to compete for leadership at the policy level.

Objective - To establish an intern program, which will utilize the resources of the State Board of Vocational, Technical and Adult Education, the University of Wisconsin, and local vocational districts to insure an ongoing annual input of two established vocational educators into a doctoral candidate program. The first two interns should be enrolled during the 1971-72 school year.

Problem - To insure that the Wisconsin Vocational system, secondary and post secondary, obtains representative appointments into Doctoral level programs sponsored under Section 552, Part F of Public Law 90-35 (EPDA).

Section 552, Part F of the Educational Professions Development Act, is entitled the Leadership Development Program. This program is designed to increase the supply of qualified high level leadership personnel in vocational and technical education. Universities offering graduate study at the doctoral level in a comprehensive program of vocational education are eligible for grants under this act. Vocational staff members receiving two year grants under this section would assist in alleviating identified leadership problems.

Objective - To insure that a representative number of Wisconsin Vocational Educators annually receive awards sponsored under this section. Representation goals would be based on insuring that minimum allocations provided by the Department of Health, Education and Welfare are filled.

Problem - To establish an advanced graduate study program for Vocational Educators committed to a career as Adult Basic Educators.

Because the Adult Basic Education program is new in conception and implementation, a majority of the professional staff members have entered the program with traditional education preparation which does not reflect an Adult Basic Education background. There is a need for leadership and teacher trainer expertise in this area dealing with disadvantaged clientele.

Objective - To develop an intern fellowship program which will allow one participant to pursue a Doctoral Degree in Adult Education at the University of Wisconsin, for a two year period, and also be employed as a one-half time teacher trainer staff member in the State Board of Vocational, Technical and Adult Education. This program would be conducted during the 1971-72 and 1972-73 school years.

Problem - A leadership conference, of one week duration, should be conducted for 40 post-secondary staff members.

The development of vocational districts, accompanied by enlarged administrative staffs, has created a statewide influx of administrative staff members who do not necessarily have their philosophical roots grounded in vocational education. District problems which they address themselves to are normally related to their specific position. A conference of administrative personnel or potential administrators, covering the broad aspects of vocational education administrative problems would be of value to this group.

Objective - Conduct a leadership workshop during the 1971-72 school year.

Problem - A leadership development program for 20 secondary system LVEC's should be conducted.

The Vocational Education Act of 1963 provided new directions for vocational education, at the secondary level, in Wisconsin. This new emphasis has developed a statewide group of Local Vocational Education Coordinators (LVEC's) who are the administrators of vocational education at the secondary level.

This new educational development has evidenced the need to:
1) further develop the general and special vocational education competence of LVEC's who occupy newly formed positions of leadership and responsibility; and 2) provide special staff direction through the Department of Public Instruction to assist teacher educators in developing needed pre-service courses and in providing for a continuing in-service program for all LVEC's in the state.

Objective - Conduct a leadership workshop to serve a select group of 20 LVEC's during the 1971-72 and 1972-73 school years.

Problem - To upgrade additional nurse educators educationally through full time attendance in masters degree level educational programs.

The expansion of LPN programs and the rapid development of ADN programs has created a need for greater numbers of nurse educators with masters level graduate training. The ADN program requires these kinds of staff members as instructors and the health occupations field in general has a greatly increased need for educators with advanced degrees.

- Objective - To utilize resources available to the State Board of Vocational, Technical and Adult Education, the two university systems in Wisconsin, and the local vocational districts, to further the educational stature of two nurse educators in the Wisconsin Vocational system during the 1971-72 school year.
- Problem - There exists a need to develop in-service programs to serve the specific unique needs of the District Directors. These should be meaningful, rigorous, academic programs to provide administrative expertise not normally provided in their educational and work-experience background.
- Objective - To develop a program during the 1971-72 school year which may be initially implemented for the in-service training of District Directors. To sponsor at least one training program for these administrators.
- Problem - There exists a need to develop administrative evaluation programs which serve as the basis to determine the effectiveness of district administrative staff members.
- Objective - To develop during the 1972-73 school year an administrative evaluation program which may be utilized by VTAE Districts.
- Problem - Exchange of State and/or District personnel with universities should be studied.
- Objective - Personnel exchange programs with universities should be undertaken by the 1973-74 school year.

SUPPORTIVE STAFF DEVELOPMENT

- Problem - Develop seminar programs for High School guidance counselors which will provide them with meaningful programs in career orientation and career development activities for vocational students.

High school guidance counselors lack background information on the values of vocational education training on both the secondary and post-secondary levels. Seminar programs to direct them to vocational education should be established.
- Objective - Establish a pilot program during the 1971-72 school year to direct high school guidance counselors to vocational education.
- Problem - Joint appointments of district personnel with CESA Agencies and secondary schools should be studied.

- Objective -** Personnel exchange programs with CESA Agencies or secondary schools should be undertaken by the VTAE Districts by the 1973-74 school year.
- Problem -** There exists a need to develop workshops for supportive staff personnel directed towards specific timely issues such as: Information Systems Development, fiscal year conversions, and other district/state management relationships.
- Objective -** To establish a minimum of two workshops during the 1971-72 school year for those supportive staff members affected.

INSTRUCTIONAL STAFF DEVELOPMENT

- Problem -** To establish a recruitment program which will provide assistance to the individual districts in the recruitment of professional staff members.

Occupationally competent, certified professional staff members for the Wisconsin Vocational-Technical System are difficult to recruit. This is especially true of occupational instructors employed in the health field and for newly developing programs. The advent of area development has greatly increased the demand for new staff members, this same development has apparently lessened the state staff's capability to assist in staff recruitment, this may be due to the fact that no new staff members have been made available to assist the districts in this matter. A formalized and on-going staff recruitment program is required to assist in solving this problem.

- Objective -** To develop a program of recruitment which may be utilized by the various districts to recruit professional staff members.

- Problem -** To develop teacher preparation programs to meet the unique needs of vocational education. Some of the teacher preparation problems currently facing vocational education are:

1. To meet the teacher preparation needs for new and future emerging occupational programs which will be established in the vocational system and for which there are no teacher preparation programs available.
2. The health occupations field is one of the fastest growing service areas in the Wisconsin vocational system today. There is a need to develop a comprehensive teacher preparation program for the health occupations.
3. There is a need to develop a teacher preparation program for "tradesmen" instructors and other instructors who enter the vocational system with less than baccalaureate degree preparation.
4. There is a need to develop teacher preparation programs to prepare general education teachers with a background which stresses the unique needs of vocational education.

There are very few teacher preparation programs available for vocational education in Wisconsin. Studies should be undertaken and action implemented to correct this situation.

Objective - To establish teacher preparation programs to serve the Wisconsin vocational education systems.

Problem - To establish a formal in-service program for the training of a minimum of 500 part time staff members.

The advent of vocational district development has greatly increased the field services obligation of the Wisconsin vocational system. Presently there are over 4,000 part-time instructors employed as instructors in the vocational system. The vast majority of these staff members have not been provided with the necessary in-service programs which help them identify themselves with vocational education.

There exists a need to establish a formal program of in-service training, throughout the state for part-time staff members. Areas to be covered by mini-courses are:

1. Philosophy and Principles of Vocational Education.
2. Methods and Techniques for Teaching Adults.
3. Methods and Techniques for Serving Persons with Special Needs.
4. Psychology Motivation, characteristics and needs of the adult learner.
5. Counseling and Interviewing Adult Students.
6. Evaluation of Effectiveness and Results of Service.

Objective - To support the Establishment of Formal in-service programs for part-time staff members in 3 VTAE Districts during the 1971-72 school year. Initial programs to train 300.

Problem - To establish an in-service institute for call-staff vocational-technical teachers trainers.

The rapid expansion of vocational districts full-time instructional staff has led to the expansion of collegiate level extension courses to assist these new staff members in obtaining standard certification status. To meet this need extension courses have been established by Stout State University, throughout Wisconsin utilizing selected approved district personnel as instructors.

There exists a need to establish a two week institute for these extension instructors to insure a continuity and cohesiveness of instruction.

Objective - Conduct a two week teacher training workshop during the 1971-72 school year for 20 call staff extension instructors.

Problem - To establish seminar programs for Adult Basic Education instructors, areas requiring emphasis are: evaluation, curriculum development, content area workshops, use of para-professionals in the classroom.

Many Adult Basic Education instructors have background area preparation in elementary instruction. These staff members need upgrading training in professional expertise to work with adults. Specific seminars designed to serve statewide staff members are needed to upgrade these personnel.

Objective - To conduct a seminar program in evaluation for ABE staff members. The seminar will consist of five two day meetings during the 1971-72 school year and will serve a minimum of 20 participants, and will be conducted at the University of Wisconsin.

Problem - To establish workshops to serve general education instructors. One or two week workshops for practitioners of Communications, Mathematics, Science, and Social Science subjects should be established.

New emphasis on general education subjects has created a large influx of general education staff members. Generally speaking, these staff members received a professional training which was oriented to the needs of secondary level, college bound students.

There exists a need for workshops which will serve the purposes of 1) developing a commonality of objectives for general education instructors, 2) provide these instructors with an insight and a philosophy which will allow them to work with adult students with a wide range of background interests, and abilities, and 3) serve as the base for future local in-service programs.

Objective - To conduct a minimum of two general education workshops, for a minimum of 20 students each, during the 1971-72 school year.

Problem - To conduct workshops for Adult Basic Education para-professionals emphasizing classroom effectiveness for these staff members.

A number of para-professional staff members are utilized in the Adult Basic Education program. These staff members are in need of a training program which will assist them in becoming more effective in the classroom.

Objective - To conduct a workshop which will cover two 2-day weekends, and one weeks duration. The workshop will stress classroom effectiveness for para-professionals and will serve a minimum of 20 personnel. The workshop should be conducted during the 1971-72 school year.

Problem - Provide in-service workshop for high school administrators which will provide them with a vocational-technical orientation.

A large number of high school administrators are not familiar with the goals established for vocational education; nor are they aware of the potential program value which can be derived from vocational education programs.

Objective - To establish workshops which will provide school administrators with an orientation towards vocational education. This program will be conducted during the 1971-72 school year.

Problem - Develop workshop programs for High School vocational educators which will provide them with a better understanding of the problems of the urban society and how vocational education might relate to those problems.

Objective - To develop workshops for high school educators to solve the identified problem. The workshop should be established by the 1972-73 school year.

Problem - In-service workshop programs must be developed for high school vocational educators which will help them relate their teaching to the needs of handicapped and disadvantaged students.

Objective - To develop workshops for high school vocational educators. The workshop should be established by the 1972-73 school year.

Problem - Develop an in-service program for high school general educators which will direct them to the benefits which students can derive from a vocational program.

Objective - Establish a pilot program during the 1971-72 school year to orient high school guidance counselors to vocational education.

Problem - A program should be established to determine what skills will be needed by future teachers of technical subjects.

Objective - Projects should be established by the 1973-74 school year to address itself to the problem described.

Problem - A program should be established which will identify emerging occupations which will determine future staff needs.

Objective - Projects should be established by the 1973-74 school year to address itself to the problem described.

Problem - A program should be established to determine what skills will be needed by future teachers of general education subjects.

Objective - Projects should be established by the 1973-74 school year to address itself to the problem described.

Problem - There is a need to design training programs that will help teachers in vocational education and academic related areas to identify alternatives to traditional education programs in terms of serving dropouts and potential dropouts.

Objective - Projects should be established by the 1973-74 school year to address itself to the problem described.

Problem - Formal occupational experience programs for staff members requiring this training should be established by two districts.

It has long been recognized that occupational experience is the "backbone" of the vocational educating expertise. Many staff members require upgrading through additional occupational experience. It is known that the "ideal" situation regarding occupational experience programs is for the local educational unit to arrange agreement with local industries. To date very little has been done in this area of instructor development.

Attempts should be made to establish pilot programs, of occupational training agreements, in at least two of the eighteen vocational districts.

Objective - Encourage two VTAE districts to develop cooperative exchange programs with local industries during the 1971-72 school year.

Problem - There exists a need for the development of courses by universities to prepare post-secondary teachers in the classroom use of educational technology.

Objective - Universities and colleges, within the State of Wisconsin, should be contacted by the 1972-73 school year to determine which institutions may be in a position to offer these services.

Problem - There exists a need for annual on-going sequential nursing educator workshops to upgrade nursing instructors.

Objective - Work with the University of Wisconsin-Madison to insure that an annual program of workshops are established to serve the identified need.

Problem - There exists a need to develop an instructor evaluation program which may be utilized by the various districts to assess staff effectiveness.

Objective - To develop during the 1972-73 school year an instructional evaluation program which may be utilized by VTAE Districts.

Problem - Establish a one week workshop for preparing nursing instructors to meet minimum requirements to teach in ADN programs.

The Wisconsin vocational system is rapidly developing new Associate Degree, Registered Nursing Programs. Additional programs will be developed to meet the needs established by the discontinuance of existing hospital training programs. The technical competence required by staff members to teach in ADN programs is more rigid than that required for LPN programs. There exists a need, now, to upgrade present staff members to meet future needs.

Objective - To support the establishment of a one week workshop during the 1971-72 school year to upgrade nursing instructors to meet ADN requirements. To obtain a minimum of 20 students to attend such a conference.

Problem - A statewide program of cooperation with industries should be established to provide occupational experience for instructors of the vocational system needing this assistance.

Objective - By the 1973-74 school year a statewide program designed to offer occupational experience to vocational educators should be established.

Problem - A cooperative program between districts and industry should be considered to specifically assist general education staff members in determining how their disciplines apply to the world of work.

Objective - By the 1973-74 school year a cooperative program should be established to address itself to the problem described.

CHAPTER V

OBSERVATIONS AND CONCLUSIONS, AND RECOMMENDATIONS

This section of the report presents observations and conclusions of the assessment group. For the most part they have grown out of data reported in previous chapters; however, much more data was collected than reported, therefore not all observations or conclusions are necessarily supported directly by data found in the report.

A last section includes recommendations relative to the personnel development program.

Observations and Conclusions

- . . . Evidence indicates that there will be a continuing demand for vocational teachers at both the post-secondary and secondary levels.
- . . . The practice of recruiting post-secondary teachers, particularly from business and industry, is appropriate and should continue.
- . . . Personnel development has not been a high priority especially in terms of financial support with the State Board; however, there is substantial evidence that the need to provide more resources is now being recognized and that a higher priority is being placed in this area.
- . . . That liaison with universities is being strengthened in order to maximize their resources.
- . . . Perhaps the greatest need is that of inservice education to strengthen present faculties and to build the strengths of individuals who may be recruited.
- . . . A continued effort is desirable to facilitate the movement of individuals from business and industry into the vocational system. This is particularly true in expanding areas like the health occupations where professional preparation for the occupation is provided in a setting other than the traditional teacher preparation program.

- . . . The data concerning secondary vocational programs would indicate that more needs to be done in terms of providing vocational orientation to high school counselors.
- . . . The stated objectives of the post-secondary vocational system to place greater emphasis in the next five years in working with the culturally disadvantaged would seem to relate to an important priority.
- . . . There is evidence at the post-secondary level particularly, that young administrators are being encouraged to further their academic preparation. An increasing number of State Board staff have enrolled at the University of Wisconsin and several District Administrators have been provided the opportunity to pursue further education both at Stout and the University of Wisconsin.
- . . . The internship provided through Education Professions Development Act funds through the State Board is highly commendable.
- . . . The inservice activities conducted by State Board of Vocational, Technical and Adult Education and the Department of Public Instruction staff appear to have been quite effective and represents a major effort of both staffs.

Recommendations

- . . . Preservice programs for teachers should continue to be developed with particular emphasis on ways of providing teachers for new and expanding occupational areas.
- . . . Additional emphasis is needed in the preparation of teachers of disadvantaged, both urban and rural.
- . . . Teacher education institutions should continue to look toward ways to provide students with the occupational competence necessary. It will not be possible or maybe even desirable to build educational programs in a teacher education institution so that the major portion of the occupational content can be included for many of the occupational areas for which teachers are needed. The field experience program at Stout State University and the intern programs at the University of Wisconsin are good examples of one approach.
- . . . Teacher education institutions should continue to move toward more flexibility in evaluation of competence for degree credit purposes gained as a result of professional training and industrial training or experience.

- . . . Policies and programs should be encouraged that would increase the exchange of teachers and other staff members with skilled and supervisory personnel in industry in order to relate the programs in the schools more closely with employer needs.
- . . . Additional financial resources should be made available through the State Board of Vocational, Technical and Adult Education for staff development.
- . . . Consideration should be given to having a staff development position on the State Board staff. The role might appropriately be one of promoting and managing resources as opposed to carrying out staff development functions personally.
- . . . Consideration should be given to supporting selected universities financially for carrying out rather clearly defined inservice activities on a continuing basis.
- . . . The State Board should continue their efforts in making it possible for potential leaders in vocational education to secure further training through internships at the State Board office and through encouraging of policies at the District level which would make the pursuing of additional training possible.

APPENDIX A

May 10, 1971

Dear Vocational Educator:

We would appreciate receiving your assistance in helping us assess staff development needs for vocational and technical personnel in post secondary schools.

Staff development is a major segment of a comprehensive assessment program being done of vocational and technical education for the State of Wisconsin under the leadership of the Wisconsin Advisory Council on Vocational and Technical education.

You can directly assist us by completing the attached form and returning it in the enclosed self-addressed stamped envelope as soon as possible. Your responses will maintain their anonymity and will be treated collectively in the analysis.

The final assessment report will be made public after it is completed. Thank you for your help.

Sincerely,

Merle E. Strong
Merle E. Strong, Chairman
Department of Educational Administration
and Study Director, Wisconsin Advisory
Council On Vocational Education

STAFF DEVELOPMENT QUESTIONNAIRE

DIRECTIONS: Following is a list of proficiency items related to training needs and requirements for teachers of vocational-technical education. For each statement there is one rating scale divided into three parts (1 2 3/ 4 5 6 7/ 8 9). Please circle one rating in each part of the scale which best indicates YOUR FEELINGS about the knowledge or skill with regard to YOUR JOB. The following key should be used for the assignment of the ratings:

1. My job requires slight proficiency with this activity.
2. My job requires moderate proficiency with this activity.
3. My job requires considerable proficiency with this activity.
4. My formal education provided slight proficiency in this activity.
5. My formal education provided moderate proficiency in this activity.
6. My formal education provided considerable proficiency in this activity.
7. The statement is inappropriate in my case.
8. Yes this proficiency should be improved through staff development.
9. No this proficiency should not be improved through staff development.

Please do not leave out any items--there are no right or wrong answers. Even if your exact choice is not found in one of the choices, select the one which comes closest to your true feeling.

NOTE: Each statement should have three ratings.

STAFF DEVELOPMENT QUESTIONNAIRE

	I Profi- ciency			II Adequacy				III Staff Develop- ment	
I. What proficiency must you have in your work as a teacher in the ability to:

APPENDIX B

WISCONSIN BOARD OF VOCATIONAL, TECHNICAL AND ADULT EDUCATION
137 East Wilson Street, Madison, Wisconsin 53703
C. L. Greiber, Director

September 30, 1970

I.L. 71-50
Subject: 1970-71 Calendar of Called Conferences and Events

To the District Directors
Wisconsin Schools of Vocational,
Technical and Adult Education

Dear Co-Worker:

Copies of the 1970-71 "Called Conferences" are enclosed for your information.

The called conferences have been designed to improve the quality of education in our districts. Participation by your district would be of great importance.

In addition, a listing of meetings is enclosed for your information. These meetings have been called by other agencies, such as the U. S. Office of Education, Administrators' Association and State Advisory Committees.

If you should desire further information, please feel free to contact us.

Sincerely,

C. L. Greiber
State Director

ABSTRACT - THE GOALS OF THIS EXEMPLARY
PROJECT WERE TO PROVIDE: (1) AN INTEGRATED
PROGRAM AT THE ELEMENTARY AND SECONDARY
LEVEL, (2) GUIDANCE AND COUNSELING SERVICES
AT THE SECONDARY LEVEL, (3) VOCATIONAL
PROGRAMS TO ASSIST EVERY SCHOOL TRAINEE,
PARTICULARLY DISADVANTAGED AND/OR HANDICAPPED
YOUTH, IN DEVELOPING BASIC JOB SKILLS, AND
(4) EXTENSIVE STUDENT PERSONNEL SERVICES FOR
EACH SCHOOL TRAINEE. DURING THE FIRST YEAR,
THESE RESULTS WERE ACHIEVED: (1) MANY
ELEMENTARY AND JUNIOR HIGH SCHOOL STUDENTS
HAVE BEEN EXPOSED TO OCCUPATIONAL INFORMATION
THAT SHOULD ASSIST THEM IN MAKING MORE
REALISTIC CAREER CHOICES, (2) MANY ELEMENTARY
AND JUNIOR HIGH SCHOOL TEACHERS ARE
DEVELOPING MORE POSITIVE ATTITUDES TOWARD THE
CAREER DEVELOPMENT PROGRAM, (3) MANY
DISADVANTAGED STUDENTS HAVE BEEN PLACED IN
EMPLOYMENT OR WORK EXPERIENCE SITUATIONS AS A
DIRECT RESULT OF THE PROJECT, (4) CURRICULUM
MATERIALS ARE BEING FIELD-TESTED AND REVISED
BEFORE PUBLICATION AND DISSEMINATION, AND (5)
DATA GATHERING FOR THE SUMMATIVE EVALUATION
HAS BEEN INITIATED. BASED UPON EXPERIENCES
GAINED IN THE PROJECT, IT WAS CONCLUDED THAT
THE PROJECT DESIGN IS EFFICIENT AND EFFECTIVE
IN IMPLEMENTING A CAREER EDUCATION PROGRAMS,
AND THE STAFF ARE EXTREMELY COMPETENT AND
SHOULD FACILITATE MEETING THE PROJECT
OBJECTIVES. (5B)

I. SUMMARY OF REPORT

COMPREHENSIVE OCCUPATIONAL EDUCATION PROGRAM FOR THE ELEMENTARY AND SECONDARY SCHOOL

A. Time Period Covered by the Report

The Huntsville, Alabama project, "Comprehensive Occupational Education Program for the Elementary and Secondary School", is a three year project. The project was funded November 10, 1970, and is to extend through December 31, 1973.

The time period covered by the report is from January 1, 1971 through December 31, 1971, which is the first year of operation of the Huntsville program.

B. Objectives

The central purpose of this program is to package and demonstrate in one operational setting those practices found effective in other isolated programs. More specifically, the project objectives are:

1. To provide an integrated occupational orientation program at the elementary and secondary level to broaden the experiences of students.
2. To provide guidance and counseling services at the secondary school level necessary to assist students in appraising their current interest, aptitudes, skills, and personalities in relation to their occupational preferences.
3. To provide vocational programs to assist every school terminee, with special emphasis upon those with academic, socioeconomic and other handicaps, in developing basic understandings, skills and abilities needed for job entry and/or continuing education in the areas of the student's occupational choice.
4. To provide extensive student personnel services, including guidance, counseling and placement, for each school terminee.

C. Procedures

Acceptance of the concepts of occupational choice and vocational maturity as a process which begins early in childhood and continues well into adulthood indicates a need for a comprehensive occupational education program with structure, content, and processes which will provide students with occupational information, guidance, and learning experiences at appropriate times as they move toward vocational maturity and the transition from school to work.

Work experience situations on-campus or in selected establishments in the community are being provided for students who need financial assistance to remain in school, or who can otherwise profit from the experience. Next academic year, students whose proneness to drop out seems irreversible will be provided short-term intensified training in selected occupational areas; therefore providing them with at least minimal employment skills before they sever their connection with the school. Some potential dropouts who complete this intensive training may be induced to remain in school and apply their skills in a work experience or cooperative training program.

Short-term intensive training and cooperative part-time training also provides occupational education opportunities for students who are not dropout-prone, but who have not had previous training and wish to develop salable skills prior to graduation.

D. Results and Accomplishments

1. Many students at the elementary and junior high levels have been exposed to occupational information that should assist them in making more realistic career choices when the time comes.
2. Many teachers in the elementary and junior high schools are developing more positive attitude toward the career development program and many have already integrated the occupational information into their own curriculums.
3. Many disadvantaged students have been placed in employment or work experience situations as a direct result of the project.
4. Observable attitudinal changes have been made in many students involved in the program.
5. Lines of communication have been established and cooperative activities initiated with many other governmental and community action agencies. Excellent working relationships exist with Model Cities, other governmental agencies, social and lay organizations.
6. Curriculum materials are being field-tested and revised before publication and dissemination.
7. Data gathering for the summative evaluation has been initiated.
8. Many students have been held in school already, as a direct result of guidance and counseling by the exemplary staff.
9. The exemplary staff have become accepted members of each participating school. Success in this phase is felt due to the philosophy and approaches taken to insure that the project becomes an integral part of each school curriculum.
10. Excellent plans have been initiated in the utilization of resource persons in the educational process of career development.
11. Personnel with excellent qualifications and attitudes have been selected to work in the program.

E. Evaluation

The staff members of the Occupational Research Development Unit of Auburn University are assuming the major responsibility for directing the evaluation of the program. The ORLJ staff has established evaluative criteria and is coordinating the development of additional tests, developing data collection procedures and instruments, and collecting and analyzing data pertaining to the operation of the program.

The program evaluation model (Figure 2, page 19a) is a graphic representation of the sequence and principal factors which will be considered in the formative evaluative process for the project. Steps 1 through 7 represent the sequence and factors for conventional program evaluation. Steps 8, 9, and 10 adapt the model for use in exemplary programs and provide feedback and corrective action.

Summative evaluation will consist of determining the extent to which students exposed to the proposed program have:

Objective 1 ... increased their knowledge up to or above a pre-determined level as measured by pre- and post-administration of teacher constructed examinations.

Objective 2 ... made realistic occupational preferences as indicated by a comparison of counselor assessment prior to enrollment in programs, counseling and student follow-up activities, and measurement by the Minnesota Satisfaction Questionnaire.

Objective 1 and 2 ... developed greater vocational maturity as measured by pre- and post-administration of the Attitude Test of the Vocational Development Inventory.

Objective 2 and 3 ... developed a salable skill in the occupation of their choice as measured by the Minnesota Employment Satisfactoriness Questionnaire after one month of employment.

Objective 4 ... have had a minimum of four individual counseling sessions before terminating their schooling as measured by 10 percent random selection of 11th and 12th grade program enrollees.

Objective 5 ... have had a minimum of four individual counseling sessions before terminating their schooling as measured by 10 percent random selection of 11th and 12th grade program enrollees.

The Data Matrix for gathering data for the summative evaluation is included as Appendix A.

The third parties progress and evaluation report is attached as Appendix B in this report.

F. Conclusions and Recommendations

1. Conclusions

Based upon the experiences already gained in the project and the local constraints in the Huntsville setting the following conclusions have been drawn, at this time frame, for the project.

- a. The project design is one of the most efficient and effective designs for the implementation of a career education program.
- b. The staff members who have been selected are extremely competent and should facilitate meeting of project objectives most effectively.
- c. A program as massive as the Huntsville Project definitely needs a full-time project-coordinator who has the major responsibility for the project.
- d. A sound foundation has been developed to the present time to further ensure a successful project.
- e. Excellent cooperation between many governmental and social agencies has added many benefits to the project. Opportunities now exist to assist students in career development that would never have been possible and many other opportunities are developing.

2. Recommendations

A major justification for the Huntsville project was to develop and implement a comprehensive occupational education program for the elementary and secondary school utilizing a largely disadvantaged population. This was to be the tooling-up phase for a total career education program that would better serve the needs of the nation and its citizens. At this point in time the following recommendations are made:

- a. Fundings of projects and project starting times should coincide with the academic year in school systems whenever possible.
- b. Strong leadership from the superintendent and other administrators in a school system is necessary for career education to be a success. Vocational educators cannot carry out a total career education program in a school system.

- c. Materials should be thoroughly field tested before they are published and disseminated. Publishing and disseminating for their sake alone may reduce or slow down the transferability process.
- d. The use of consultants can be a valuable motivational tool for staff members and they should be periodically.
- e. To be effective and maintain longevity the changing of the school curriculum to approach a career education concept should never be a forced act in a school system. Proper teacher attitudes are a must and the introduction and initiation phase must be a slow and diligent process.

II. BODY OF REPORT

COMPREHENSIVE OCCUPATIONAL EDUCATION PROGRAM FOR THE ELEMENTARY AND SECONDARY SCHOOL

Vocational education shares with all education the responsibility of assisting youth with the inevitable problem of transition from school to employment. The school curriculum is one of the vehicles by which this transition could be made somewhat easier if effectively organized. The organization and offerings of the present school curriculum do not provide for the fullest development of human potential in that the curriculum does not allow students an opportunity to explore and identify with the occupations. Programs of instruction should be initiated from elementary through the high school to allow for and guide the career development process.

A. The Nature and Significances of the Program

Vocational education shares with all other educational activities in the schools a responsibility for assisting youth with the inevitable problem of transition from school to employment. This transition may occur prior to graduation (as in the case of dropouts), upon graduation, or may be postponed by further educational experiences at the post-high school level. The essential points are that the transition does occur and the schools have a responsibility for making it effective.

The central tenet of this project is expressed in six foundation statements for directing innovated thinking and the adoption of proven practices for more effective vocational education programs. (1965;7)

The statements are as follows:

1. Accessibility to quality vocational education programs;
2. Programs to meet the full spectrum of capabilities of youth and adults;
3. Coupling vocational and general education as integral parts of a common core within a total educational program;
4. Open-ended continuous vocational education and training opportunities;
5. Early orientation to vocational education through exploratory occupational experiences in a setting where the traditional division of education into separate educational subject disciplines is replaced by an educational "mix" starting in the elementary school; and
6. Instructional flexibility to prepare students for adaptation to constantly changing employment patterns.

In view of the diminished opportunities of present-day youth to directly observe and explore the broad spectrum of the occupational alternatives available to them, it should be the function of the schools at all levels to provide experiences that broaden the range of occupational aspirations and opportunities for all youth.

The problem to which this project is addressed is that of designing and implementing in the Huntsville City Schools a comprehensive program of occupational information, vocational counseling, and vocational instruction which will effectively create a bridge between school and work for young people. The proposed services extend from the elementary through the high school level for youth of all ages and abilities, with particular emphasis upon youth with academic, socioeconomic, or other handicaps.

This goal is being accomplished by redirecting some present programs at the high school level and implementing new programs of occupational information, occupational orientation, counseling, vocational preparation, and placement.

The following discussion notes previous studies and experiments and related literature that form the foundation for meeting project objectives while meeting the needs of students.

Traditional programs of occupational education have tended to be designed in view of assumptions that students would remain in school at least until high school graduation and that, somehow, students would make realistic occupational choices when they reached the senior high school level where most occupational preparatory instruction is provided. Even now, in most school systems occupational orientation and guidance activities are concentrated at the senior high school level. There is considerable research to indicate that these activities should also be provided at the elementary and junior high levels.

Probably two of the most imperative reasons for extending occupational orientation and guidance activities down into the elementary and junior high schools in the proposed project are:

1. Occupational choice and development of vocational maturity are long-range processes which begin early in a child's life; and
2. As society becomes more complex and the variety of occupations proliferates, youth have diminished opportunities for observation of and exploratory experiences in those occupational areas.

Occupational orientation and guidance were perhaps less important responsibilities of the schools in an earlier rurally-oriented society where a youth might, in the course of his day-to-day activities, have opportunities for direct observation of and participation in the relatively small range of occupational choices available to him. When the time came to choose an occupation, if he had a realistic choice other than the family farm or family business, he had only to choose from what was already familiar.

The vocational guidance field appears to have retained a similar concept of vocational choice for nearly a half century; however, since 1950 there has been an increasing emphasis upon the concept that vocational choice is a long range developmental process. Vocational psychologists have always recognized the relative bareness of their explanation of vocational behavior. The involvement of economists, psychologists, sociologists, psychiatrists, and educators in the field of research has led to the formation of a framework for theory building and in a more common language in the field of vocational guidance and counseling.

The concept of vocational maturity is a relatively new one having been defined operationally by Super (1953;20). He describes vocational behavior for the early adolescent as (1) orientation to vocational choice, (2) information and planning, (3) consistency of vocational choice, (4) crystallization of vocational tracts, and (5) wisdom of vocational choice. Crytes (1960;21) views vocational maturity more as a construct and suggested that certain of these dimensions could be analyzed into choice competencies. Super (1960;21) characterized the determinates of career patterns as (1) individual characteristics and experiences, (2) individual personal situation, (3) individual environment, and (4) non-predictable factors. These determinates include attitudes toward work, work values, self concepts, and levels of aspiration as well as intellectual and physical characteristics.

Hoppock (1957;11) indicates that the knowledge of the world of work and work experiences have an influence on the level of occupational aspirations. He suggests that occupational material should be prepared and presented differently at different stages of student development and that early presentation of occupational information may facilitate the understanding of the occupational concepts, identification of vocational interests, realism of self concept, appropriateness of vocational choice, and readiness to function as an effective employee. Occupational information provided early may also reach potential early school leavers and thereby reduce the dropout rate in the high school.

Isaacson (1966;14) states that the high school student inevitably moves toward a view of himself as being against a background of the world of work. Occupational information and career activities must be involved with the traditional information phase and also provide the student with an opportunity to try out his self concept. This exploratory phase, then, should be one of the traditional functions of the high school.

Isaacson goes on to say that students are typically several years away from making a firm occupational choice since most of the students are becoming concerned with the occupational world as they move toward it. A large portion of youth have had at least casual work experiences and hopefully these contacts lead to increasing awareness of the importance of wise vocational planning.

The program at Huntsville is providing information about the world of work at the elementary level. This information is incorporated into regular classroom activities to help students relate this information to occupations. Students are encouraged and propelled to think about and seek answers to such questions as:

Why do people work? What kinds of work are there in the community? What kinds of work are there in society beyond the immediate community? What kinds of people do the work in the community and the larger society? Why do people go into various kinds of work? What kinds of work do parents of students do? How do people get their jobs? What are the characteristics of people in different jobs? What are the fundamental tools, materials, and processes involved in the work that people do?

In discussing why and how vocational education activities should be extended to the elementary school level, Franks (1965;7) in Summer Study noted that:

The use of interdisciplinary units, which are rooted in the child's interest and prior experience and by which interest and experience expand, enhance the child's reliance on the use of his own resources and his ability to reason. The child should mainly be answering "How?" and "Why?", rather than "What's", "Who's", and "When?". He discovers the "What's", "Who's?" and "When's?" in trying to explain the "How's" and "Why's". These, by establishing an intellectual framework will enable him to remember the others better.

Orientation, exploration, and relevancy to the world of work for elementary youth was also noted in a program by Hunt (1965;13). She stated after much study and research in the Technology for Children Project that it is a must "that we 'teach' technology in some intellectually honest form" at the earliest possible moment. "The early years are the crucial years." Here, she is suggesting elementary school and maybe even nursery school. The Technology for Children Project was responsible for placing the teaching of technology in many elementary schools in New Jersey today.

Hunt also noted that "research now suggests that children can and are being introduced to concepts at pre-school and school age that were once thought to be strictly the domain of secondary schools and colleges."

The Huntsville project is also providing vocational orientation and exploration throughout the secondary school level. The findings of several studies conducted elsewhere are being incorporated into the program design.

Program activities at the junior high school and high school level, include efforts to provide a smooth transition from the elementary grade level on into the world of work. Additional emphasis upon orientation and exploratory activities in a broad spectrum of the tools, materials, processes, and participants of the world of work is being provided. Learning experiences are being designed to facilitate students' understanding of an industrial and technological society and the occupational, economic, and social consequences of such a society.

The investigator of Project Talent (1968;3) noted that:

...a pilot investigation led us to conclude that to meet the needs of prospective vocational education students a guidance system must help these students in educational and vocational planning, interest them in the exploration of the training opportunities for skilled trades, and motivate them to seek information and perhaps pursue enrollment at such institutions.

It further suggests that this be done at the elementary, junior high, and secondary school levels.

In Summer Study (1965;7) there was substantial agreement on a number of basic issues for program development in vocational education. One of these operational aspects evolving from the issues for the Huntsville program is that the junior high activities will evolve continuously and be connected with activities of education in senior high school. There will be no terminal education goals, but rather the programs will provide foundations for continuing education whether it be on the job or in formal post high school curricula.

A program pattern that incorporates ideas and program elements for the project was discussed by Stutz and Merrell (1967;18). The main objectives of the program were to help students to: (1) make realistic career selections, (2) develop skills and competencies useful in a broad spectrum of careers, and (3) develop specific job entry skills.

Stutz and Merrell made extensive use of individual counseling, community resource people, exploratory experiences, work experiences and on-the-job training. The Huntsville project is developing to obtain maximum benefit from these techniques utilizing the student population with the highest number of disadvantaged students in the Huntsville System.

Ertel (1966;6) noted the necessity of occupational orientation at all levels when he stated:

... occupational freedom involves both informed choice of alternatives and competence to work effectively. The economy needs constantly larger numbers of workers possessing new capabilities. But youth can only evaluate those occupational choices that they perceive. They are free to perform only the kinds of work for which they acquire competence.

Hudak and Butler (1967;12) reported that a pilot program results indicated that students would increase their capabilities to make appropriate educational and vocational decisions by completing the program.

The Huntsville program is utilizing aspects of the "galaxy" approach to the world of work as reported by Turnquist (1965;22). This program operating in the Detroit public schools consists of three phases.

Phase I (primarily for students in grades seven through nine) consists of preliminary exploratory experiences.

Phase II (grade ten) narrows the field of study to a smaller number of occupations chosen according to the student's interests.

Phase III (grades eleven and twelve) consists of a specific "galaxy" of occupations chosen to provide the students with salable skills.

Ideas and methods used in the Huntsville project also take a cue from DeBlassie and Jones (5) in concluding that:

"Occupational information is not just a group of pamphlets and books in the library or in the counselor's office. Rather, it is integration of all available appropriate materials into all aspects of the curriculum and total part of the school. Such integration demands that guidance counselors not limit their activities and influence to the counseling office. Counselors must cooperate with teachers and persuade them to incorporate information in their courses and other school activities."

The Huntsville project is also utilizing several operational aspects of the Paola Pilot Project (1967;24) especially in the area of guidance and counseling. The Paola Project describes the successful development and use of materials and methods to be used in an interdisciplinary and unified program of vocational education for juniors and seniors. Guidance, career information, work attitude development, and world of work investigation were the successful features of the Paola Project that are being integrated into the Huntsville Project.

In addition to the occupational orientation and the guidance and counseling functions for all students the proposed Huntsville project is attempting to provide instruction for the full spectrum of employment opportunities. Most of these are being offered through on-campus and community work experience programs, at the upper junior high level and community work experience and cooperative education for senior high school students. Special programs are being provided for those students who are academic, socio-economic or otherwise handicapped and students not previously enrolled in Vocational Education. Special effort is being made to encourage potential dropouts to stay in school and to get dropouts back into vocational programs and provide them with an opportunity to develop a salable skill, and proper job attitudes to be successful in the world of work.

In the case of the potential dropout a special effort is being made to help the student see the relationship between the academic instruction and occupations. Since these students may be entering the labor markets with a more limited educational background and with fewer basic skills than most other workers the proposal will allow them to capitalize upon whatever assets they have. Proper attitude development is another critical area the Huntsville project is attempting to capitalize on for this type student also.

Elements from pilot training programs for alienated youth (1968;25) are being used as a pattern for the project. Skills necessary for available job opportunities, and activities effect behavioral changes through a program of guidance and counseling, and academic instruction will be provided so that these students may acquire the personal characteristics needed for their role as productive adults and responsible citizens.

Each student's interests and needs will be studied and a program of vocational training suited to his particular abilities hopefully can be developed. This analysis of an individual's attitude, interest, personality is hoped to be a point of departure in assisting the student in analyzing himself in relation to the world of work.

An evaluation report Neighborhood Youth Project by Aller (1967;1) indicates if programs keep youth of low income families in school and encourage out-of-school youth to return to school they should:

1. Provide training-related jobs and fewer of the menial variety; and
2. Increased counseling services.

Kaplan (1967;15) also reported success in a program to design demonstration occupational training centers for 16 and 18 year old potential or actual dropouts. Methods used in the centers were intensified training, work experience, and cooperative education.

Havighurst and Stiles (1961;9) reported that "The work-experience program, as applied to potential dropouts, is a significant education instrument to return "alienated youth", those who "have quit learning and have dropped out of school psychologically two or three years before they drop out physically."

Savityky (1962;17) after much work in many programs observed that:

... There had been undue emphasis on the necessity to structure work-experience programs for potential dropouts for skill training in specific jobs, especially the less demanding, low-level occupations. This has, in part, been responsible for either shunning, or accepting grudgingly, placements which appear unattractive or have no future; e.g., messenger work. This development loses sight of the fact that the potential dropouts in work-experience programs are troubled with problems growing out of maladjustments, many bearing the scars of negative environmental factors such as broken homes. Their confusion and malaise have not, at the point of joining the class, cleared sufficiently to make a decision as to job preference, training and vocational choice. For many, their lack of competency and ambition is not due to innate intellectual inadequacies but to a temporary malfunction for reasons which have already been indicated. Their immediate needs are for large-scale changes which will restore their sense of belonging and for opportunities to experience success, so that they can later transfer to, and rejoin, the normal track of schooling without additional props or enter the world of work far better equipped educationally and socially. The job experience is a tool, one of the tools, to help achieve this rehabilitation. It is a laboratory for learning the dignity of all work, how to hold a job, and how to accept responsibilities. Work habits and attitudes become all important, especially since findings by Menninger and others have shown that more than 70 percent of persons discharged from employment are dismissed because of personality and social inadequacies.

Work experience will not be only for the potential dropout or handicapped in the proposed project. Two hundred and fifty work stations in the Huntsville area had already been identified for work experience and cooperative education programs when the proposal was first developed. Due to economic conditions in the Huntsville area, this is almost nil. However, much effort is being spent to locate training stations for students because this seemed a necessary phase of career development for this student population.

Beam and Clary (2) stated that ... "there is no way for a person to be certain that he has chosen the right occupation until he has actually worked in it long enough to find out for himself." A California Evaluative Study Committee (1969;26) on work experience concluded that the primary purpose of work experience education was to provide a sound basis for an informed career choice. They further suggested that a prerequisite for work experience was adequate vocational guidance prior to placement in the training station.

Aller (1967;1) found in working with the Neighborhood Youth Center evaluation that work-experience programs were an asset in allowing youth to test job interests in an urban environment.

Cooperative education at the senior high level will also be a part of proposed project. Marks (1963;16) notes that cooperative education is a positive means by which we may bring relevancy into the curriculum. He states:

... occupational experiences are a significant part of learning activities planned by the distributive education teacher coordinator. They are school-connected, deriving their educational value from the effectiveness of their coordination with classroom experiences. Their purpose is the development of individual capacities and competencies needed for the ultimate achievement of career goals.

Another planned element of the Huntsville project is specific training for job entry skills for those students not previously enrolled in vocational programs just prior to the time these students leave school. This project element is still in the developmental stages but it is felt that this element can add much to the comprehensive career development program.

Intensive occupational guidance and counseling during the last years of school will be provided. Initial placement and follow-up of all students will be done at the completion of their schooling. Several successful pilot projects associated with the aforementioned elements have been conducted through the U.S. The successful aspects from these projects will be included in the Huntsville project.

Sullivan and Mandell (1967;19) reported much success in a short term education and training program for the operators of automatic data processing machines. Intensive guidance and counseling activities toward the end of the program were beneficial.

The New Careers Development Center (1967;23) reported success in a three-phase program designed for the rapid training of nonprofessionals for entry level civil service positions. Trainees were employed on a part-time basis during the training period by the police, health, and welfare, inspection, and housing and relocation department. In Phase I, trainees were required to perform useful elementary tasks on the job for a four-week preservice period. Phase II consists

of a four-week transition period during which the trainee works one-half day of each day and devotes the other half to discussing his on-the-job experiences and problems. In Phase III, the trainee receives special training one day per week in addition to daily supervision on the job for the balance of the program.

Work Instruction for the Food Services Industry (1963;27) was a program to develop learning media for communicating task methods to employees. The media used consisted of a step-by-step procedures on colored 35mm slides. It was reported that this pictorial type of program was more effective than spoken or written words. It was further noted that it is especially effective for employees with lower levels of verbal and reading skills.

Grissman and Densley (1969;8) when discussing placement activities of programs emphasized that "... placement studies may determine weakness of a program." Therefore, placement is an important element for formative and summative evaluations. Hoerner (1968;10) found in a study that "... the counseling treatment was found to significantly affect (1) the subject's obtaining bona fide and legitimate jobs, (2) the number of weeks it required subjects to get such jobs, and (3) the percent of time subjects held such jobs."

B. Objectives

The central purpose of this program is to package and demonstrate in one operational setting those practices found effective in other isolated programs. More specifically, the project objectives are:

1. To provide an integrated occupational orientation program at the elementary and secondary level to broaden the experiences of students.
2. To provide guidance and counseling services at the secondary school level necessary to assist students in appraising their current interest, aptitudes, skills, and personalities in relation to their occupational preferences.
3. To provide vocational programs to assist every school terminee, with special emphasis upon those with academic, socioeconomic and other handicaps, in developing basic understandings, skills and abilities needed for job entry and/or continuing education in the areas of the student's occupational choice.
4. To provide extensive student personnel services, including guidance, counseling and placement, for each school terminee.

C. Description

1. General Design

Acceptance of the concepts of occupational choice and vocational maturity as a process which begins early in childhood and continues well into adulthood indicates a need for a comprehensive occupational education program with structure, content, and processes which will provide students with occupational information,

guidance, and learning experiences at appropriate times as they move toward vocational maturity and the transition from school to work.

The design for this project is conceived as an integrated vertical structure of three levels of activity which coincide with the elementary, junior high, and senior high school organizational pattern of Huntsville City Schools (Figure 1). There are planned coordination of services within and between levels of this program and with other programs in the seven schools involved.

At the elementary school level, development of an awareness of and acquisition of general information and understandings about the world of work is the most important aspect of development of occupational choice and vocational maturity (Super, 1953;20). This is being accomplished by making occupational information and exploratory activities an integral part of the overall pattern of learning activity in the fourth, fifth, and sixth grades. A resource teacher and a teacher aid assists classroom teachers in developing appropriate content and processes. All occupational information activities are coordinated through the teacher-counselor at this level. The activities are being developed with the intent of changing teacher attitudes in hopes of having the occupational information phase of the project become an established and continuing process in the elementary school curriculum.

At the junior and senior high school levels, a variety of occupational information, exploratory, training, and counseling services are being provided and coordinated within and between levels. For most students, occupational education activities in the seventh grade are a transition from broadly-based activities in the elementary school to progressively more specific activities at the high school levels.

Seventh grade students are participating in an occupational information and guidance program, where they investigate the tools, materials, and processes of a broad spectrum of occupational groupings. Through this activity, supplemented by interest inventories, aptitude testing and counseling, students are being assisted in recognizing their individual patterns of interests, skills, and aptitudes, and are encouraged to relate these to broad occupational groups.

At the end of the eighth grade many students will move into work experience programs. The emphasis here is upon further exploration and definition of occupational interests rather than upon development of specific job competencies. Seventh and eighth students are being exposed to many activities to enhance proper attitudes and develop healthy self concepts.

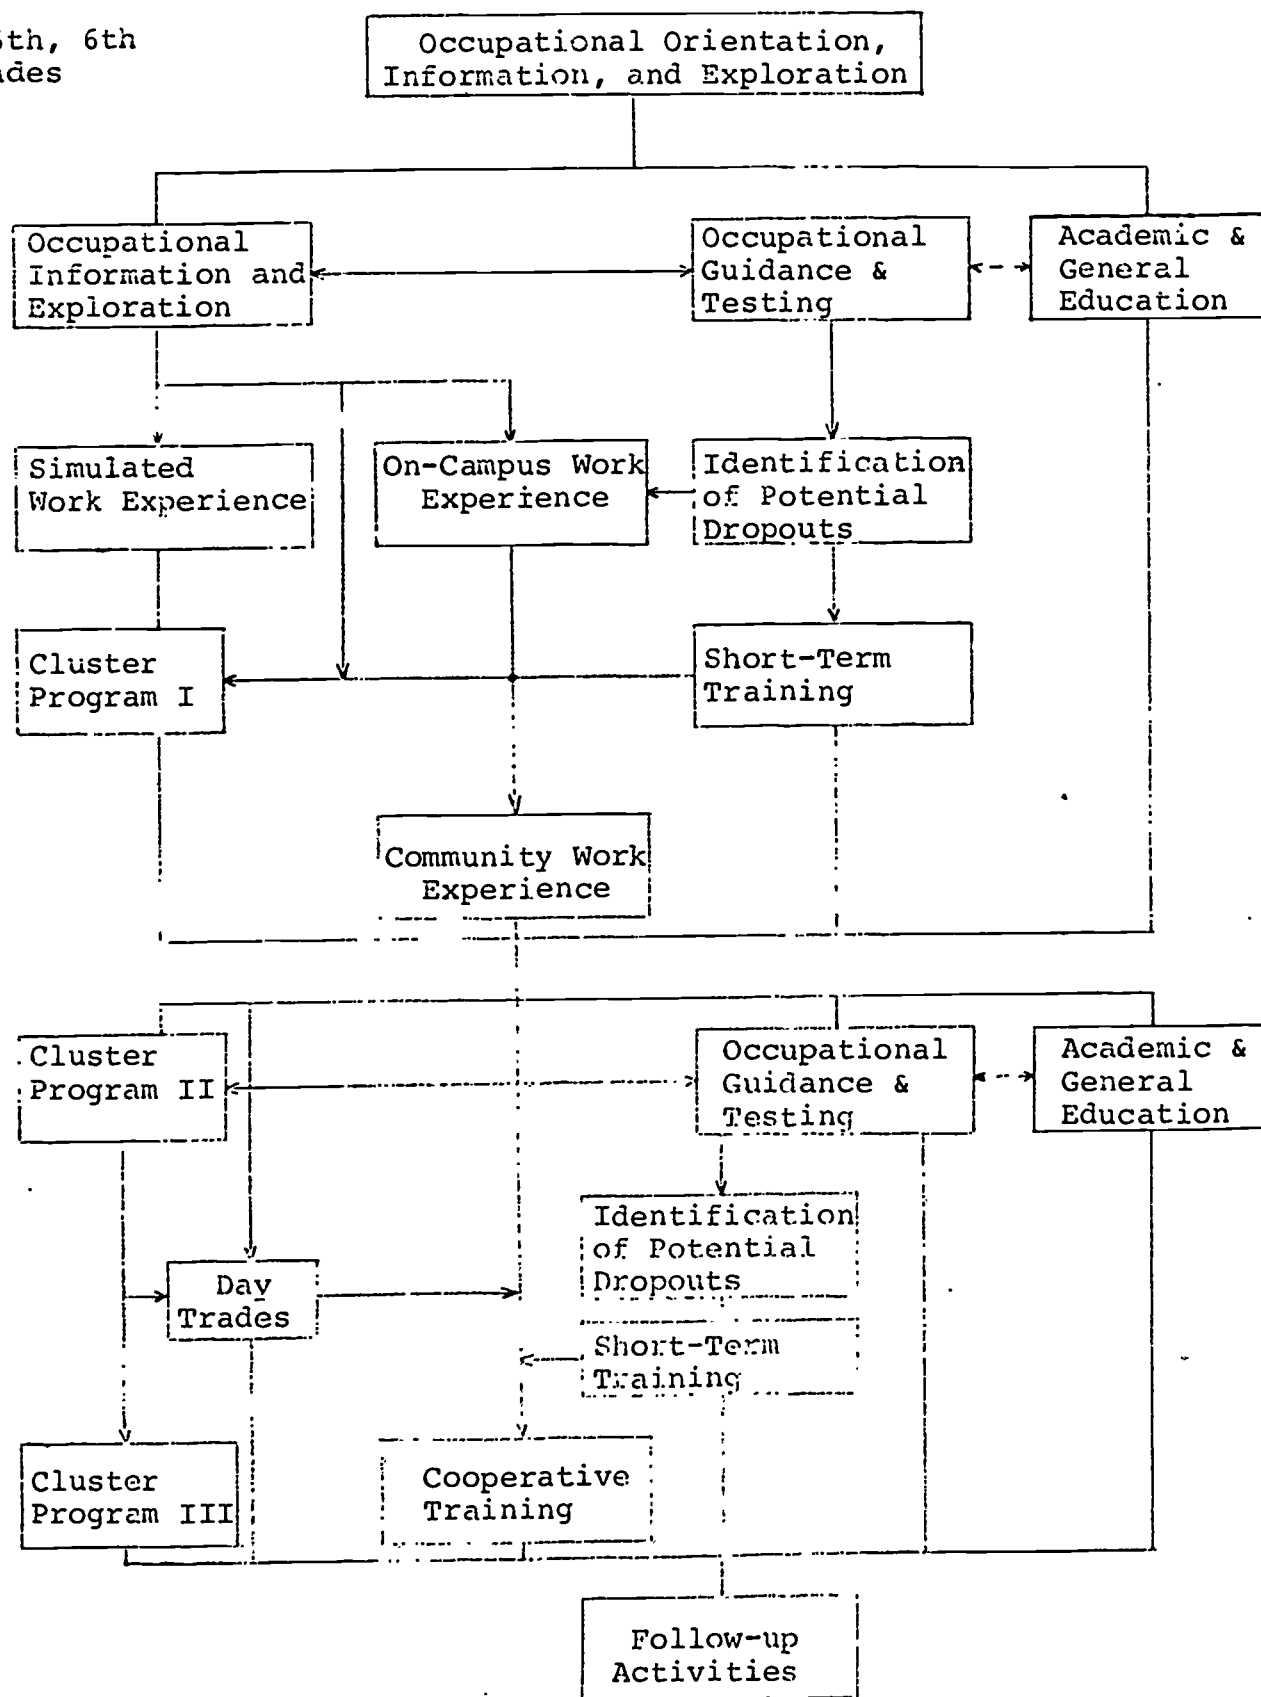

At the senior high school level, students will have an option of intensified training, preparatory training in specific occupational areas, cooperative part-time training or some combination of these.

Early identification of students who are academically or socio-economically disadvantaged, handicapped, and/or are potential dropouts is being practiced; and these students are being provided with additional guidance and counseling services. With the variety and possible combinations of services to be offered within the junior and senior high school levels, it is expected that with special considerations most of these students can be appropriately placed in the regular occupational education course offerings.

4th, 5th, 6th
Grades

Junior High Schools

Senior High Schools

Work experience situations on-campus or in selected establishments in the community are being provided for students who need financial assistance to remain in school, or who can otherwise profit from the experience. Next academic year, students whose proneness to drop out seems irreversible will be provided short-term intensified training in selected occupational areas; therefore, providing them with at least minimal employment skills before they sever their connection with the school. Some potential dropouts who complete this intensive training may be induced to remain in school and apply their skills in a work experience or cooperative training program.

Short-term intensive training and cooperative part-time training also provides occupational education opportunities for students who are not dropout-prone, but who have not had previous training and wish to develop salable skills prior to graduation.

2. Schools or Locations

Four elementary schools, Cavalry Hill, Fifth Avenue, Terry Heights, and West Huntsville, along with two junior high schools, Cavalry Hill Junior High and Stone Junior High, and one senior high, Butler High School, were selected for the Huntsville program. These elementary and junior high schools were selected because they represent the major portion of the student population that feeds into Butler High School. In this Model City area, these schools also represent the largest percentage of socioeconomic, academic, and other handicapped students.

The facilities of the Vocational Technical Center (secondary level area vocational school) are being utilized in the project.

3. Participants

At present most students in grades 4 through 6 are participating in an integrated occupational orientation program (occupational information and exploratory activities). This phase of the program is now reaching approximately 1,088 students, of which 65 percent are classified as socioeconomically handicapped. This percentage varies from 34% in one school to 85% in another school.

All students in the two junior high school programs are participating in the guidance and counseling service programs which include the study of broad occupational groups. Approximately 660 students are involved in several types of exploratory activities in this phase of the program. Many potential school terminees and over-age youth, as identified by the counseling services and teacher referrals, are involved in work experience programs which will lead to job placement or cooperative education programs.

No personnel has yet been assigned to work with students and teachers at Butler High School. A work experience coordinator has been located and will be assigned to this task February 1, 1972.

4. Instructional Staff

Teacher/Counselor - Elementary Level	- Mrs. Nina Hoop
Teacher/Counselor - Junior High Level	- Mrs. Ethel Bradford
Teacher/Counselor - Junior High Level	- Miss Jessie Conn
Instructor - Industrial Arts or Basic Vocational	- Robert G. Bradshaw
Teacher Aide	- Mrs. Pearlle Draper
Teacher Aide	- Mr. Randall Higgins

TO BE HIRED:

Instructor - Industrial Arts or
Basic Vocational

Coordinator - Work Experience

Project Coordinator -

- To Be Designated
(Not Mr. W. M. Clark as listed
in the original proposal. Mr.
Ben Garmon serving part-time.)

5. Methods and Materials

Prior to initiating the instructional program, an in-service training program was conducted for the purpose of faculty orientation and professional development. Planning sessions have begun for planning, discussing problems, and coordinating each facet of the program.

The Technology for Children Projects (1965;13) course of study is being utilized for exploratory experiences at the elementary grade levels.

This project is adapting and utilizing the methods, at all grade levels, discussed by Stutz and Merrell (1967;18). The use of resource people for the guidance information and field trips into community business, as well as visits to the schools, are included in the program.

Job attitude and occupational orientation materials developed in the Paola Pilot Project (1967;24) are being adapted and used in the project. These materials are being integrated into the regular programs already offered and the intensified programs to be developed.

The intensified training methods will be derived from the procedures illustrated in the occupational training centers discussed by Kaplan (1967;15). The New Careers Centers (1967;23) concept for rapid training of non-professionals in Phases will be incorporated into this program. This method will be beneficial in revitalizing student interest and motivating him to re-enter the regular vocational programs.

Individualized instruction as used in the pilot project (1968;25) and the communicate task methods used in the Work Instruction for the Food Services Industry (1963;27) is being expanded and utilized with handicapped students.

The work experience phase of the project is developed to coincide with those developed in the Neighborhood Youth Center (1967;1).

All materials developed in the project are still in the testing stage. Publication and dissemination of materials will not be attempted until all materials have been field tested.

D. Results and Accomplishments

1. Many students at the elementary and junior high levels have been exposed to occupational information that should assist them in making more realistic career choices when the time comes.
2. Many teachers in the elementary and junior high schools are developing more positive attitude toward the career development program and many have already integrated the occupational information into their own curriculums.
3. Many disadvantaged students have been placed in employment or work experience situations as a direct result of the projects.
4. Observable attitudinal changes have been made in many students involved in the program.

5. Lines of communication have been established and cooperative activities initiated with many other governmental and community action agencies. Excellent working relationships exist with Model Cities and other governmental agencies, social and lay organizations.
6. Curriculum materials are being field tested and revised before publication and dissemination.
7. Data gathering for the summative evaluation has been initiated.
8. Many students have been held in school already as a direct result of guidance and counseling by the exemplary staff.
9. The exemplary staff have become and accepted members of each participating school. Success in this phase is felt due to the philosophy and approaches taken to insure that the project becomes an integral part of each school curriculum.
10. Excellent plans have been initiated in the utilization of resource persons in the educational process of career development.
11. Personnel with excellent qualifications and attitudes have been selected to work in the program.

E. Evaluation

The staff members of the Occupational Research Development Unit of Auburn University are assuming the major responsibility for directing the evaluation of the program. The ORDU staff has established evaluative criteria and is coordinating the development of additional tests, developing data collection procedures and instruments, and collecting and analyzing data pertaining to the operation of the program.

The program evaluation model (Figure 2) is a graphic representation of the sequence and principal factors which will be considered in the formative evaluative process for the project. Steps 1 through 7 represent the sequence and factor for conventional program evaluation. Steps 8, 9, and 10 adapt the model for use in exemplary programs and provide feedback and corrective action.

Summative evaluation will consist of determining the extent to which students exposed to the proposed program have:

Objective 1 ... increased their knowledge up to or above a pre-determined level as measured by pre- and post-administration of teacher constructed examinations.

Objective 2 ... made realistic occupational preferences as indicated by a comparison of counselor assessment prior to enrollment in programs, counseling and student follow-up activities, and measurement by the Minnesota Satisfaction Questionnaire.

Objective 1 and 2 ... developed greater vocational maturity as measured by pre- and post-administration of the Attitude Test of the Vocational Development Inventory.

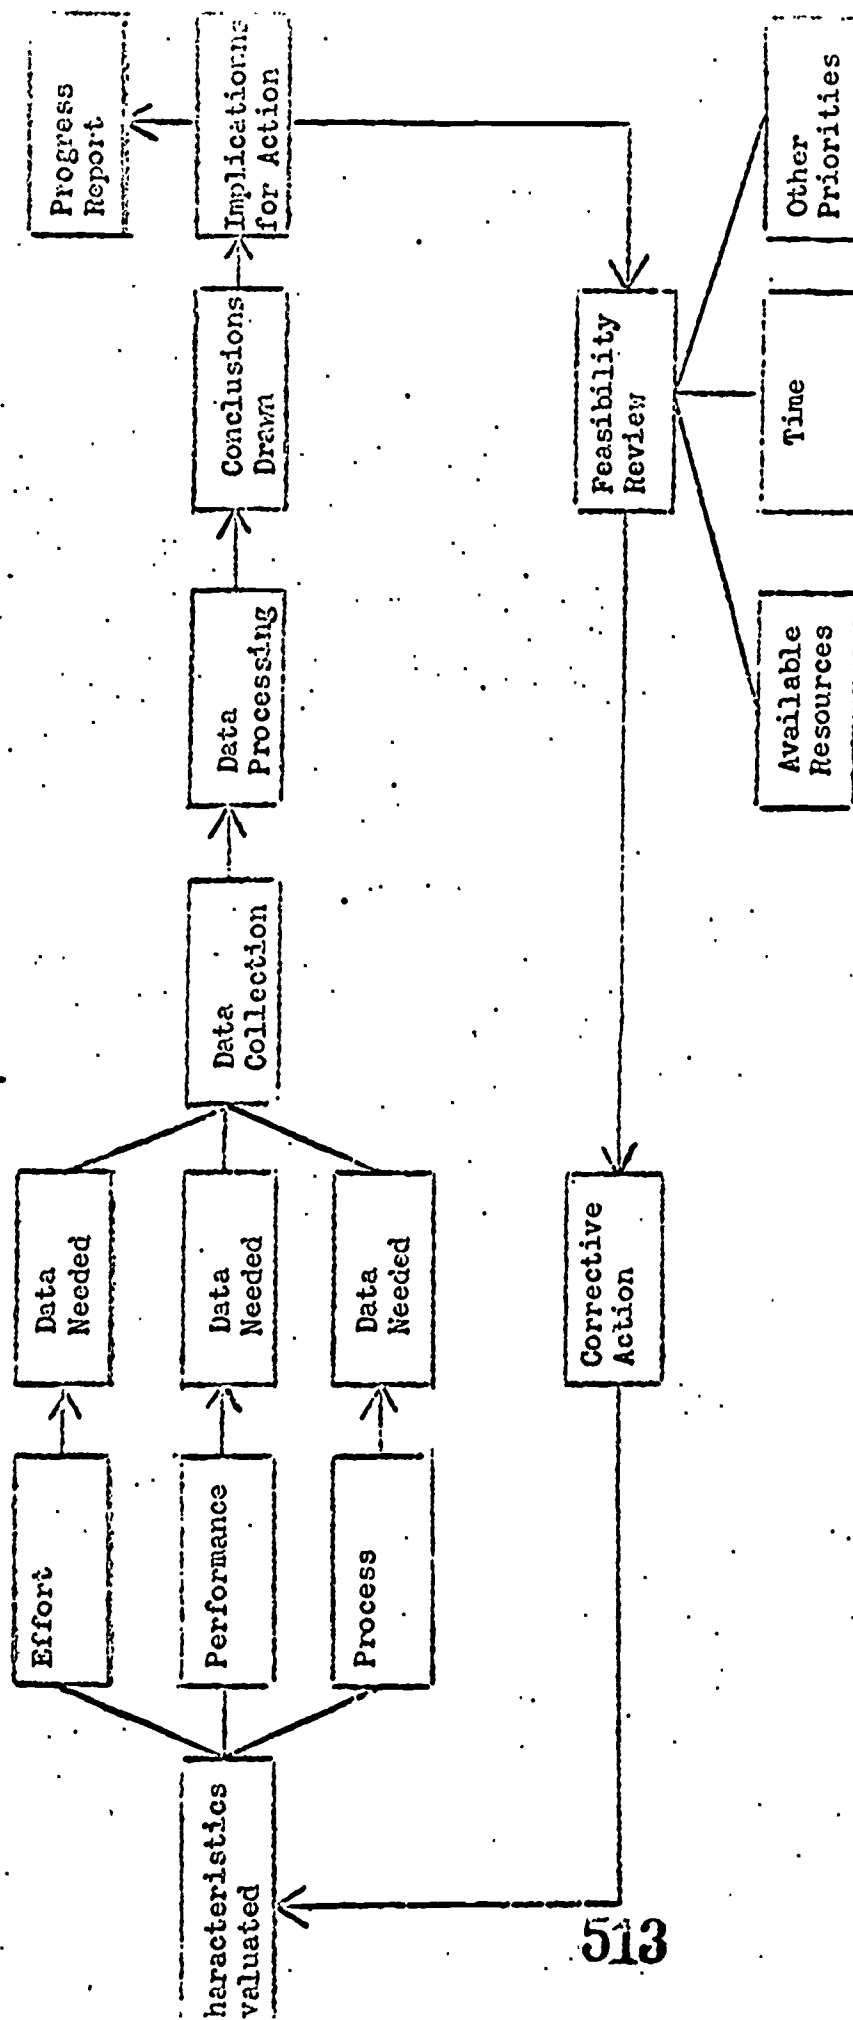

Figure 2 - Program Evaluation Model

Objective 2 and 3 ... developed a salable skill in the occupation of their choice as measured by the Minnesota Employment Satisfactoriness Questionnaire after one month of employment.

Objective 4 ... have had a minimum of four individual counseling sessions before terminating their schooling as measured by 10 percent random selection of 11th and 12th grade program enrollees.

Objective 5 ... have had a minimum of four individual counseling sessions before terminating their schooling as measured by 10 percent random selection of 11th and 12th grade program enrollees.

The Data Matrix for gathering data for the summative evaluation is included as Appendix A.

The third parties progress and evaluation report is attached as Appendix B in this report.

F. Conclusions, Implications and Recommendations

1. Conclusions

Based upon the experiences already gained in the project and the local constraints in the Huntsville setting the following conclusions have been drawn, at this time frame, for the project.

- a. The project design is one of the most efficient and effective designs for the implementation of a career education program.
- b. The staff members who have been selected are extremely competent and should facilitate meeting of project objectives most effectively.
- c. A program as massive as the Huntsville Project definitely needs a full-time project-coordinator who has the major responsibility for the project.
- d. A sound foundation has been developed to the present time to further ensure a successful project.
- e. Excellent cooperation between many governmental and social agencies has added many benefits to the project. Opportunities now exist to assist students in career development that would never have been possible and many other opportunities are developing.

2. Implications

From the one year of involvement in the project the following implications seem apparent:

- a. The project design is transferable to most school systems with a minimum of alteration.
- b. If project is deemed a success it offers much to the education process of career development for the disadvantaged.
- c. Methods and materials developed and utilized in the project can provide a basis for other school systems to initiate career education curricula at a minimum tooling-up cost.
- d. When more continuity is developed in the project and students have the opportunity to complete the program they should be better able to make rational career choices. This should cause reduced anxiety in people which should lead to better citizens, better parents, better neighbors, and more productive individuals.

3. Recommendations

A major justification for the Huntsville project was to develop and implement a comprehensive occupational education program for the elementary and secondary school utilizing a largely disadvantaged population. This was to be the tooling-up phase for a total career education program that would better serve the needs of the nation and its citizens. At this point in time the following recommendations are made:

- a. Fundings of projects and project starting times should coincide with the academic year in school systems whenever possible.
- b. Strong leadership from the superintendent and other administrators in a school system is necessary for career education to be a success. Vocational educators cannot carry out a total career education program in a school system.
- c. Materials should be thoroughly field tested before they are published and disseminated. Publishing and disseminating for their sake alone may reduce or slow down the transferable process.
- d. The use of consultants can be a valuable motivational tool for staff members and they should be brought in periodically.
- e. To be effective and maintain longevity the changing of the school curriculum to approach a career education concept should never be a forced act in a school system. Proper teacher attitudes are a must and the introduction and initiation phase must be a slow and diligent process.

INTRODUCTION

Vocational education shares with all other educational activities in the schools a responsibility for assisting youth with the inevitable problem of transition from school to employment. This transition may occur prior to graduation (as in the case of dropouts), upon graduation, or may be postponed by further educational experiences at the post-high school level. The essential points are that the transition does occur and the schools have a responsibility for making it effective.

The central tenet of this project is expressed in six foundation statements for directing innovated thinking and the adoption of proven practices for more effective vocational education programs.¹

The statements are as follows:

1. Accessibility to quality vocational education programs;
2. Programs to meet the full spectrum of capabilities of youth and adults;
3. Coupling vocational and general education as integral parts of a common core within a total educational program;
4. Open-ended continuous vocational education and training opportunities;
5. Early orientation to vocational education through exploratory occupational experiences in a setting where the traditional division of education into separate educational subject disciplines is replaced by an educational "mix" starting in the elementary school; and
6. Instructional flexibility to prepare students for adaptation to constantly changing employment patterns.

The underlying concept of this project is that vocational choice and preparation is a continuing process which spans a long period of time and requires a concerted effort by educators to develop a process by which a student can realistically select and attain success in a given vocation.

The program involves the utilization of the elementary teachers, grades 4-6, the junior high school teachers, the vocational personnel, counseling services, and facilities of several schools in the Huntsville School System.

¹Frank, N. H., The Summer Study of Occupational Vocational and Technical Education, (Cambridge, Mass.: Massachusetts Institute of Technology, 1965).

The results of this project have implications for the implementation of similar approaches in solving vocational problems at the local, state, and national levels.

OBJECTIVES

The central purpose of this program is to package and demonstrate in one operational setting those practices found effective in other isolated programs. More specifically, the project objectives are:

1. To provide an integrated occupational orientation program at the elementary and secondary level to broaden the experiences of students.
2. To provide guidance and counseling services at the secondary school level necessary to assist students in appraising their current interest, aptitudes, skills, and personalities in relation to their occupational preferences.
3. To provide vocational programs to assist every school terminee, with special emphasis upon those with academic, socio-economic and other handicaps, in developing basic understandings, skills and abilities needed for job entry and/or continuing education in the areas of the student's occupational choice.
4. To provide extensive student personnel services, including guidance, counseling and placement, for each school terminee.

GENERAL DESCRIPTION

Acceptance of the concepts of occupational choice and vocational maturity as a process which begins early in childhood and continues well into adulthood indicates a need for a comprehensive occupational education program with structure, content, and processes which will provide students with occupational information, guidance, and learning experiences at appropriate times as they move toward vocational maturity and the transition from school to work.

The design for this project is conceived as an integrated vertical structure of three levels of activity which coincide with the elementary, junior high, and senior high school organizational pattern of Huntsville City Schools. There is and will be further planned coordination of services within and between levels of this program and with other programs in the seven schools involved.

At the elementary school level, development of an awareness of and acquisition of general information and understandings about the world of work are the most important aspects of developing occupational choice and vocational maturity. This will be accomplished by making occupational information and some exploratory activities integral parts of the overall pattern of learning activity in the fourth, fifth, and sixth grades. A resource teacher assists

classroom teachers in developing appropriate content and process. The resource teacher also does some demonstration teaching to assist the other teachers in adopting these new approaches. Most of the exploratory phases of the program had to be dropped due to a reduction in funds.

At the junior and senior high school levels, a variety of occupational information, some exploratory training, and counseling services are to be provided and coordinated within and between levels. For most students, occupational education activities in the seventh grade will be a transition from broadly-based activities in the elementary school to progressively more specific activities at the high school levels.

Seventh grade students will participate in an occupational information and guidance program, where they will investigate the tools, materials, and processes of a broad spectrum of occupational groupings. Through this activity, supplemented by interest inventories, aptitude testing and counseling, they will be assisted in recognizing their individual patterns of interests, skills, and aptitudes, and encouraged to relate these to broad occupational groups.

It is anticipated that by the end of the eighth grade most students will move into broadly based cluster programs or work experience programs. The emphasis here will be upon further exploration and definition of occupational interests rather than upon development of specific job competencies.

At the senior high school level, students will have an option of advanced preparatory training in specific occupational areas or cooperative part-time training or some combination of these.

Early identification of students who are academically or socio-economically disadvantaged, handicapped, and/or are potential dropouts is being practiced; and these students are provided with additional guidance and counseling services. With the variety and possible combinations of services to be offered within the junior and senior high school levels, it is expected that with special considerations most of these students can be appropriately placed in the regular occupational education course offerings.

Work experience situations on-campus or in selected establishments in the community are being provided for many students who need financial assistance to remain in school, or who can otherwise profit from the experience.

In summarizing, the problem to which this project is addressed is that of designing and installing in the Huntsville City Schools a comprehensive program of occupational information, vocational counseling, and vocational instruction which will effectively create a bridge between school and work for young people. The proposed services will extend from the elementary through the high school level for youth of all ages and abilities, with particular emphasis upon youth with academic, socio-economic, or other handicaps.

This is being accomplished by redirecting some present programs at the high school level and implementing new programs of occupational information, occupational orientation, counseling, vocational preparation, and placement.

REPORT SUMMARY

The Huntsville School System has had constant interruptions in all of its educational programs. In complying with desegregation guidelines many schools have been closed and faculty and students have transferred from one location to another causing overcrowding in most cases. Some disruptions have occurred as a result of student disorders. Many students were transferred to as many as four schools the past academic year.

The death of the superintendent during this time added to the loss of continuity in the total education program.

At present, few long range plans can be made by the vocational personnel there because schools, school zones, students, and faculty are constantly changing. One of the participating schools with an extremely high percentage of disadvantaged students has had transfer requests from 80 percent of its faculty and finally had a 50 percent turnover during the summer months.

This project was not funded until November, 1970, and the first personnel was not hired until January, 1971. Location of qualified personnel for the project has been a major problem for the Project Director and as yet all personnel have not been hired.

With this setting in mind, the most significant evaluative findings by the review team from the Occupational Research and Development Unit at Auburn University were as follows:

1. Personnel with excellent attitudes and qualifications have been employed for the project.
2. The additional qualified staff, especially the Project Coordinator, for the project need to be employed as soon as possible.
3. Teacher-Counselors seem to have developed good rapport with teachers in the schools in which they are to coordinate activities. The elementary Teacher-Counselor has taught several demonstration classes, conducted some inservice training programs for other teachers, and developed many materials for teachers to incorporate into their programs.
4. The services of a Project-Coordinator, as identified in the proposal, could not be obtained because the City Board would not agree to pay the salary suggested in the proposal since it was some higher than the regular salary schedule. A project-coordinator has still not been hired.

5. Business and industry needs to become more involved in program development.
6. One complete industrial arts facility that was scheduled for use in the project was closed to meet desegregation requirements and is now sitting idle. No space exists at any other participating school to utilize the industrial arts equipment.
7. The Project Director and Teacher-Counselors have made excellent plans for administering the program and had begun to initiate those plans at the end of the academic year. Little skepticism is evident about the possibilities of success for the program.
8. Many materials have been developed for use by the teachers in the participating schools.
9. The junior high Teacher-Counselors are doing an excellent job in working with other community action agencies in the placement of many disadvantaged students in work experience situations. Much time has been devoted to this phase of the program in hopes of having the school looked at as a place one goes to obtain employment.
10. Teacher-Counselors are constantly searching the literature for new and tested approaches to solving educational problems.
11. Teacher-Counselors should be provided with some additional inservice training in assisting students and teachers in the evaluation of test batteries to be given in terms of occupational choices. An inservice program has been planned in early fall for this purpose.
12. Little evidence exists that the Exemplary Project has been actively publicized and promoted locally and statewide.
13. The Project Director and Teacher-Counselors have developed the philosophy that if the Exemplary Project is to be a continuing success teacher attitudes and teaching methods must change. They realize that with such a small staff they cannot make an impact on the student population unless they assist all the other teachers in adopting new techniques. It is their hope that these new techniques for dealing with educational problems will continue long after the funds for the Exemplary Project have ceased.

PROCESS COMMENTS OF PROPOSAL OBJECTIVES
ACCOMPLISHMENTS AS RELATED TO PROGRAM OBJECTIVES

Objective I --To provide an integrated occupational orientation program at the elementary and secondary level to broaden the experiences of students.

Comment -- An excellent beginning has been made in the development of an integrated occupational program at the elementary and secondary level. At present, the elementary phase of the program is more advanced than the secondary phase. The Teacher-Counselors have spent considerable time in developing rapport with other teachers in the participating schools. This will greatly assist them in working toward the program objectives early in the next academic year. As yet, only a few students have been exposed to the occupational information but an excellent foundation has been developed to meet the criteria for Objective 1.

Objective II --To provide guidance and counseling services at the secondary school level necessary to assist students in appraising their current interest, aptitudes, skills, and personalities in relation to their occupational preferences.

Comment -- A commendable start has been made in providing guidance and counseling services at the secondary school level necessary to assist students in appraising their current interest, aptitudes, skills, and personalities in relation to their occupational preferences. Most tests for the testing program have been selected. An inservice training program has been planned for the winter to assist the Teacher-Counselors in aiding teachers and students to better interpret the test battery in terms of career choices. Many materials have been developed to assist the teacher-counselors with their guidance activities. The Teacher-Counselors have spent considerable time with school records to learn about the student population in each school. At the end of the academic year the Teacher-Counselors had begun to make many student contacts. The testing schedule to complement the counseling activities is being planned and administered.

Objective III--To provide vocational programs to assist every school terminee, with special emphasis upon those with academic, socio-economic and other handicaps, in developing basic understandings, skills and abilities needed for job entry and/or continuing education in the areas of the student's occupational choice.

Comment -- The Huntsville System is continually seeking funds to provide a comprehensive vocational program in the system. Much time is spent in identifying youth with academic, socio-economic and other handicaps in hopes of assisting these youth in developing basic understandings, skills, and abilities needed for job entry and/or continuing education in the areas of the student's occupational choice. The Huntsville Vocational Center offers a comprehensive vocational program and each student in the system visits the school at an early age to illustrate the many career choices in which training is available to them. The Teacher-Counselors are assisting in the identification and special recruitment of disadvantaged students for the vocational programs.

Objective IV --To provide extensive student personnel services, including guidance, counseling and placement, for each school terminee.

Comment -- The Teacher-Counselors at the secondary level have spent considerable time with many other community action agencies in searching for and placing of students, especially disadvantaged students, in work experience situations for the summer. This is a well-planned and coordinated phase of the summer. This is a well-planned and coordinated phase of the student personnel services. Guidance sessions have been conducted to assist the students in filling out interview forms and explaining work expectations on the job. Many counseling sessions have been held to encourage students, who have not developed work values, to remain in their work experience programs. The staff has a commitment to place every school terminee in permanent employment.

REVIEW TEAM EVALUATION INSTRUMENT

**EVALUATION INSTRUMENT FOR EXEMPLARY
PROGRAMS IN VOCATIONAL EDUCATION**

School or School System Huntsville System

School year 1971 Year of operation First

Program Title: Comprehensive Occupational Education Program for the Elementary and Secondary School

Function	Appraisal Factor	Scale							Findings and Stipulations
		Does not apply	Nonexistent	Ineffective	Needs improvement	Acceptable	Commendable	Outstanding	
A. Administration and Supervision	1. Responsibility for the program is functionally assigned to one individual.	X	0	1	2	3	4	5	The Vocational Director has full responsibility for the program at present.*
	2. Teachers and counselors have completed self-appraisal instruments for their respective programs.				X				
	3. Students are following their planned courses of study.		X						
	4. Teachers have teaching plans for each unit of instruction included in programs.				X				
	5. Program is being promoted with school faculty, students, parents and community groups.								Project Director and Teacher Counselors have discussed the program with many faculty, civic and other social agency groups. One local television program has given

Comments by administrators, teachers and/or students:

time for discussing the program.

The services of the Project Coordinator, identified in the proposal, could not be obtained because the City Board would not agree to pay the salary suggested in the proposal because it was somewhat higher than the regular salary schedule. No project coordinator has yet been hired. Along with excellent personnel that has been hired a project coordinator could contribute greatly to the success of the project. The Assistant Superintendent has promised to give assistance in securing a project coordinator.

Function	Appraisal Factor	Scale							Findings and Stipulations
		Does not apply	Nonexistent	Ineffective	Needs improvement	Acceptable	Commendable	Outstanding	
		X	0	1	2	3	4	5	
A. Administration and Supervision (Cont'd.)	6. Program results are being coordinated and disseminated.								
	7. School is involving business and industry in program development.				X				Several business and industrial groups are involved in different phases of the total vocational program. Excellent working relationship exists with business and industry. Possibility more involvement of business and industry in this project could lead to a more effective program especially in the placement of students.
	8. Cooperative arrangements have been made with other school systems or non-profit private schools.	X							
	9. Advisory committees are properly constituted and active.					X			One major program advisory committee is properly constituted, and acts as the advisory committee for the Exemplary Program also.

Comments by administrators, teachers and/or students:

Function	Appraisal Factor	Scale							Findings and Stipulations
		Does not apply	Nonexistent	Ineffective	Needs improvement	Acceptable	Commendable	Outstanding	
		X	0	1	2	3	4	5	
B. Facilities	10. Adequate classroom space is available for all phases of the program.					X			Schools are crowded due to court order closing some schools to meet integration requirements.
	11. Basic laboratories and equipment are provided for the exploration and orientation functions.	X							Funds for the original proposal were reduced and most all exploratory phases were eliminated. Almost no basic laboratory equipment exist.*
	12. Specific skills laboratories and equipment are available and current with business and industry practices.				X				Almost no laboratories and equipment existing in the participating schools except in the Vocational-Technical Center. Their equipment is outstanding.
	13. Safety is prominent in the design and operation of the classrooms and laboratories.					X			Most participating schools are fairly new and safety features were incorporated in the design.
	14. Arrangements have been made in the community for the use of specialized equipment and facilities not available at school.				X				No evidence exists.

Comments by administrators, teachers and/or students:

*One of the original schools scheduled for involvement in the exemplary program contains a complete Industrial Arts facility. This school was closed due to court action concerning integration. No space exists at any of the other participating schools for the Industrial Arts equipment.

Function	Appraisal Factor	Scale							Findings and Stipulations
		Does not apply	Nonexistent	Ineffective	Needs improvement	Acceptable	Commendable	Outstanding	
		X	0	1	2	3	4	5	
C. Curriculum	15. Activities and experiences are being conducted to enhance self-understanding in relation to the world of work at the junior high level.						X		Staff members were not hired until January or later and much time the past academic year was spent in planning, coordinating and preparing materials for this academic year. Due to the character-
	16. Provisions have been made for exploratory and preparatory instruction at the senior high level.								istics of the student population most activities have centered around attitude development.
	17. Provisions are made for work experience, cooperative education and similar programs for all students during the school year and/or in the summer, making possible a wide variety of occupational offerings.						X		<u>Most all exploratory and preparatory activities except where related to the regular academic program had to be dropped due to a reduction in funds.</u> The Teacher-Counselors are working with numerous other community action agencies many disadvantaged youth particular in work experience programs for the summer.
	18. Provisions are made for potential dropouts, general and academic students, not previously enrolled in vocational programs to receive specific intensive training in job entry skills just prior to leaving school.	X							This phase of the project was dropped due to reduction in funds from original proposal. However, plans are developing to initiate the intensified training in the near future.

Comments by administrators, teachers and/or students:

Function	Appraisal Factor	Scale						Findings and Stipulations
		Does not apply	Nonexistent	Ineffective	Needs improvement	Acceptable	Commendable	
		X	0	1	2	3	4	5
C. Curriculum (Cont'd.)	19. Provisions are made for intensive occupational guidance and counseling for students before they terminate, generally increased just before student's termination and for initial job placement.						X	Provisions are made and plans are being developed for this program phase.
	20. Provisions are made for releasing young workers from jobs on part-time basis to increase educational attainment.	X						
	21. New approaches and tested innovations which have emerged from recent research and demonstrations are utilized.						X	Most new approaches and innovations identified in the proposal are being utilized in the planning and implementation stages. The Teacher-Counselors are constantly searching for successful approaches and innovations to incorporate in the program also.
	22. Provisions are made to motivate and provide pre-professional preparation for potential vocational teachers.	X						

Comments by administrators, teachers and/or students:

Function	Appraisal Factor	Scale							Findings and Stipulations
		Does not apply	Nonexistent	Ineffective	Needs improvement	Acceptable	Commendable	Outstanding	
		X	0	1	2	3	4	5	
C. Curriculum (Cont'd.)	23. Provisions are available for student movement between academic and vocational instruction.						X		Provisions already existed for this program phase.
	24. Provisions have been made for broad occupational orientation for all students at the elementary and secondary levels to increase student awareness of range of career options.						X		Outstanding plans have been made and action taken at the elementary level. Teacher-Counselors appear to have begun to make an impact by working with other elementary teachers in the adoption of materials and methods for this program phase.*
	25. Compensatory education for vocational students is an integral part of the program.								

Comments by administrators, teachers and/or students:

- *A. Many materials have been developed at the elementary level and Teacher-Counselor has done considerable demonstration teaching for the elementary teachers. Teacher-Counselor has also demonstrated the use of the teaching materials to elementary faculty groups. Materials have been developed for several reading levels and color coded by grade levels so students do not lose status by being identified by a grade level number system. Only teachers will know the grade level of the color code. Resource persons are being utilized and list of resource persons is being distributed to all teachers.
- B. Many activities are being utilized at the junior high level for orientation purposes. One school is using all English classes to provide much occupational information. The school paper is using career development as its theme.
- C. No persons have been hired as yet for the secondary phase of the project.

Function	Appraisal Factor	Scale							Findings and Stipulations
		Does not apply	Nonexistent	Ineffective	Needs improvement	Acceptable	Commendable	Outstanding	
		X	0	1	2	3	4	5	
C. Curriculum (Cont'd.)	26. The curriculum is accepted by the student body.							X	The Teacher-Counselors are becoming accepted. This is an outstanding point in the project especially with the student population utilized for this project.
	27. The program is designed to develop in students vocational maturity and positive attitudes toward work.						X		Project director and Teacher-Counselors are constantly planning and working toward this end. All methods and activities are planned to assist students in developing positive attitudes toward work and becoming vocationally mature.*
	28. Staff members are providing occupational information in their area of specialization.					X			At the secondary level regular vocational personnel are providing occupational information in their area of specialization. At the elementary and junior high levels, the Teacher-Counselors are beginning to coordinate and provide assistance to teachers in planning and carrying out an occupational information program.
	29. The program is designed to broaden and improve the vocational education curriculums.								When program results are in all materials will be published in hopes of improving other vocational curriculums.

Comments by administrators, teachers and/or students:

*The junior high teacher counselors are spending most of their time and are developing most activities to promote positive attitudes at present. It is felt that this must be done because of the characteristics of the student population. The Evaluation Team fully agrees with this approach at this time.

Function	Appraisal Factor	Scale							Findings and Stipulations
		Does not apply	Nonexistent	Ineffective	Needs Improvement	Acceptable	Commendable	Outstanding	
		X	0	1	2	3	4	5	
D. Instruction	30. Teachers are employed and assigned to instructional duties within their area of competency.							X	Teacher-Counselors have varied backgrounds and work in areas closely related to their backgrounds. Teachers seem to be working to gain competencies in other areas particularly
	31. Teacher loads are adjusted to levels which allow for preparation, student personnel services, and curriculum development.							X	in the area of providing occupational information. Personnel employed in the proposal devote full time to preparation, student personnel services and curriculum development.
	32. Outside consultants and specialists other than professional educators are being utilized.		X						No evidence exists of any involvement of outside consultants other than professional educators.
	33. Exchange of personnel between schools, industry and school, school and other agencies, institutions or organizations is practiced.		X						
	34. Program is developing positive faculty and student attitudes toward vocational education.								Too early in program to make a judgment.

Comments by administrators, teachers and/or students:

		Does not apply	Nonexistent	Ineffective	Needs improvement	Acceptable	Commendable	Outstanding	
		X	0	1	2	3	4	5	
D. Instruction (Cont'd.)	35. Program is being served by a central library in which a career in them is prevalent.	X							
	36. Specialized department references are available for all majors.					X			Teacher-Counselors are beginning to assemble many reference materials that will be available to all teachers.
	37. An organized and systematic program of instructional evaluation is present and students are performing at a predetermined level.				X				Discussion has been given to and some unit guides are being developed around the use of behavioral objectives.*

Comments by administrators, teachers and/or students:

*Standardized exams will be given for program evaluation purposes whenever possible.

Function	Appraisal Factor	Scale							Findings and Stipulations
		Does not apply	Nonexistent	Ineffective	Needs improvement	Acceptable	Commendable	Outstanding	
		X	0	1	2	3	4	5	
E. Student Personnel Services	38. Provisions are made for obtaining information about students.					X			The school system has an adequate testing program for providing most information about students, additional test batteries (aptitude, interest, and personality) will be given. No provisions exist for visiting each students homes to obtain additional critical information.*
	39. Provisions are made for the maintenance and use of the information about students.								Teacher-Counselors plan to discuss with teachers how the information gathered may be of use to them in helping students in their programs. Teacher-Counselors also plan to discuss with students information that will aid them in appraising their current aptitude, interest, personalities and skills in relation to their occupational preference.

Comments by administrators, teachers and/or students:

*The aptitude, interest, and personality test will be used as a point of departure in helping the student to analyze himself in relation to the world of work.

Function	Appraisal Factor	Scale							Findings and Stipulations
		Does not apply	Nonexistent	Ineffective	Needs improvement	Acceptable	Commendable	Outstanding	
		X	0	1	2	3	4	5	
E. Student Personnel Services (Cont'd.)	40. Well developed, active guidance program for non-college bound youth is functioning.						X		The Teacher-Counselors at this point in time have spent most of their time working with teachers and other community action groups in order to get them to initiate many guidance activities in their programs. The Teacher-Counselors at the secondary school level will administer a testing program and explain the results to each student so he may be able to appraise himself in light of his expected career choice.
	41. Students are selecting vocational courses that relate to their interest, aptitude and personality.				X				Plans have been initiated to assess to what extent students are selecting vocational courses that relate to their aptitudes, interests & personalities*
	42. Placement of graduates is considered a school responsibility and is functionally coordinated by one person.								Project Director presently is coordinating this function. Teacher-Counselors have spent considerable time in the placement of students in summer employment. Teacher-Counselors are placing a limited number of students at present.

Comments by administrators, teachers and/or students:

*In the evaluation section of the proposal "Objective 2" attempts to assess this appraisal factor when it notes that students will make realistic occupational preferences as indicated by a comparison of counselor assessment prior to enrolling in the program, instructor assessment during the program findings during placement counseling and student follow-up activities, and measurement by the "Minnesota Satisfaction Questionnaire".

Function	Appraisal Factor	Scale							Findings and Stipulations
		Does not apply	Nonexistent	Ineffective	Needs improvement	Acceptable	Commendable	Outstanding	
		X	0	1	2	3	4	5	
E. Student Personnel Services (Cont'd.)	43. The vocational faculty and staff are committed to placement and follow-up of every school terminee.						X		Each Teacher-Counselor expresses a concern to place every school program dropout or graduate. Their effort to place many students in summer employment offers evidence of this commitment.
F. Public Relations	44. The program is being actively publicized and promoted locally and statewide.				X				One newspaper article has been written about the program. One discussion on a local T.V. station dealt with the program. Many talks have been given by the Project Director and Teacher-Counselor to civic groups.

Comments by administrators, teachers and/or students:

Function	Appraisal Factor	Scale							Findings and Stipulations
		Does not apply	Nonexistent	Ineffective	Needs improvement	Acceptable	Commendable	Outstanding	
		X	0	1	2	3	4	5	
F. Public Relations (Cont'd.)	45. The program is being actively publicized and promoted locally and statewide.								
G. Evaluation	46. Plans are in existence for planning, modification, and development on a continuous basis.					X			Meetings are held periodically for planning, coordinating, modifying, and developing the program. Much time has been spent in the development of the program thus far.
	47. Plans are in existence for evaluating and monitoring the program.								The ORDU* staff has visited the program periodically for evaluating and monitoring purposes.

Comments by administrators, teachers and/or students:

STATE ADVISORY COUNCIL

Name	Category
JOHN N. KRAMER, Chairman Fennimore, Wisconsin	Representative of local educational agency.
MRS. WILLIAM A. NIELSEN, Vice Chairman West Bend, Wisconsin	Representative of School Boards.
FREDERICK BRONSON Milwaukee, Wisconsin	Representing state industrial and economic development agency.
WARREN BROWN Hartland, Wisconsin	Familiar with vocational needs and problems of management and labor.
MISS KATHRYN T. GILL Madison, Wisconsin	Person having special knowledge and experience who is not involved in administration of state or local vocational program.
MRS. EDWARD HAERTER New Berlin, Wisconsin	Representative of general public, knowledgeable about the poor and disadvantaged.
GEORGE HALL Green Bay, Wisconsin	Familiar with vocational needs and problems of management and labor.
RAYMOND O. JONDAHL Racine, Wisconsin	Familiar with vocational needs and problems of management and labor.
EDWIN KEHL Madison, Wisconsin	Representative of manpower and vocational education agencies in state and CAMPS.
NORMAN P. MITBY Madison, Wisconsin	Representative of community and junior colleges.
JOSEPH PELLEGRIN Germantown, Wisconsin	Familiar with vocational education programs including comprehensive secondary schools.
C. D. REJAH Madison, Wisconsin	Familiar with administration of state and local vocation programs.
DR. ROBERT RUDIGER Menomonie, Wisconsin	Representative of community and junior colleges.
KEITH STOEHR Kenosha, Wisconsin	Representative of manpower and vocational agencies in state and CAMPS.
KENNETH SVEE Madison, Wisconsin	Person with special knowledge with respect to special educational needs of physically and mentally handicapped.
ROGER WAUKAU Neopit, Wisconsin	Representing school systems with large concentration of academically, socially, economically, and culturally disadvantaged students.
DR. BERNARD WEISS Milwaukee, Wisconsin	Representing school systems with large concentration of academically, socially, economically, and culturally disadvantaged students.

PREFACE

Parallel with the public's interest in the availability of health services is the requirement for well educated health manpower in adequate numbers to meet employer demands. In addition to this concern is the goal of the Wisconsin State Board of Vocational, Technical and Adult Education to make educational opportunities available to all youth and adults that will qualify them for productive and satisfying employment. The field of health care is among our fastest expanding industries with projected demands which should provide satisfactory careers for many additional persons who can qualify.

Wisconsin can be proud of its educational system for supplying health workers as well as the relatively high quality of health care being provided. The demand for health service both in terms of quality and quantity are expanding, however, which calls for a recommitment of all agencies and groups to meet these new demands.

The State Advisory Council on Vocational and Technical Education recognize that many other governmental, professional and lay groups have a prime concern in the area and therefore address the question of how to meet health education needs in a spirit of cooperation and support rather than one of competition. The fine work of all agencies involved is recognized and commended; therefore, it is the committee's desire to make recommendations helpful to the State Board of Vocational, Technical and Adult Education which will be supportive of the total State effort to provide well qualified health workers in adequate numbers in all geographical locations to meet needs.

In conducting this assessment of allied health occupations training in Wisconsin, currently available information related to the manpower needs, educational opportunities, and the regulations governing training and/or practice in the health fields have been utilized whenever possible. The research of primary data was limited by the resources of the study; therefore, the attempt has been made to bring together existing data in a systematic manner. Personal interviews were conducted with the staff personnel at the various state agencies concerned with the health occupations. These interviews have supplied much of the information contained in this report. Current surveys and studies relating to the programs and/or health occupation manpower needs were obtained from both public and private institutions including the various departments of state government.

Information and opinions of the district Vocational, Technical and Adult Education personnel were obtained through a survey of the eighteen VTAE districts. Finally, a two-day meeting on allied health occupations training programs was held in Madison on May 13 and 14 with a number of specialists from the health occupation education field, both from Wisconsin and from several other states, to review the data related to Wisconsin's current allied health occupation programs and needs with the purpose of making recommendations as to how Wisconsin might meet health occupations educational needs more adequately.

The report has been organized around the central issues related to educational planning for the allied health occupations. Chapters are devoted to the following areas: (1) health manpower needs, (2) current health training programs, (3) health occupations survey of the eighteen VTAE districts, (4) regulations and licensing, and (5) recommendations.

ACKNOWLEDGMENTS

The writers of this report are indebted to many individuals and organizations for their assistance in providing information. In spite of the risk of omitting persons that should have been acknowledged, the writer wishes to recognize the following for their assistance:

Dr. L. C. Alexander
Professor of Endodontics
Marquette University

Mrs. Margaret Apel, Consultant
Home Economics
Department of Public Instruction

Dr. Russell V. Brown, Dean
School of Dentistry
Marquette University

Dr. Robert Coy, Associate Dean
Student Affairs & Curriculum
Medical School,
University of Wisconsin

Mr. Frank Drew, Coordinator

CHAPTER I

HEALTH OCCUPATIONS MANPOWER NEEDS

The Report of the Governor's Task Force on Medical Education, initiated by Governor Warren P. Knowles in 1967, comments on the rapidly increasing consumer demand for health services. These comments seem viable in the year 1971.

Wisconsin's Medical Manpower Needs

Wisconsin, like the rest of the nation and the world, has witnessed rapid advances in medicine as new knowledge, increasing skill, new techniques, materials and medicine have led to practical ways of influencing health problems which were unknown only a few years ago. In the past several decades, the demand for health care services of all kinds has increased at a rate well in excess of both the gain in gross national product and the gain in population. The nation's total expenditures for health and medical care increased more than three-fold between 1950 and 1965, from \$12.9 billion to \$40.8 billion. While per capita expenditures increased somewhat less than three-fold, private health expenditures rose from 3.26% to 4.12% of gross national product--an increase of 26%. In addition, hospital admission rates increased from 96.6 per 1,000 population in 1946 to 138.9 in 1966. In the same period, hospital patient days rose from 879 per 1,000 population to 1,097 per 1,000 population. Every other indicator of demand for health services has increased at the same or greater rates: visit to physicians, out-patient visits, emergency department visits, nursing home patient days, home nursing visits, and many others. There is every indication that the end of this rising trend in the rate of demand for health services is not in sight.

At the same time, it has become increasingly clear that if medical service continues to advance, and it will, and the demands and needs for health care continue to grow, and they will, Wisconsin's ability to provide quality care to all those who seek it will be severely strained. Even if there were no difficulties to be foreseen in the effective utilization of our current resources, finding ways to produce and deliver an expanded level of health care services demands immediate and farsighted attention.¹

¹The Report of the Governor's Task Force on Medical Education, Madison, Wisconsin, December, 1967, p. 1.

The health care crisis in Wisconsin, forecast by this report, was brought into the public spotlight again on May 18, 1971, when Governor Patrick J. Lucey in a special message to the Legislature on "Health and Health Care in Wisconsin" described the status of the state's health care delivery system:

Today in health we have reached a state of crisis. Too many of our citizens do not enjoy equal access to health care....

It is indeed paradoxical that at the very time when we are experiencing dramatic breakthroughs in bio-medical science and research, we are still unable or unwilling to provide adequate health care for all of our citizens.

I can think of no field where there is more being done, by more people, than in health, and of no field where there is greater fragmentation of effort. This lack of clear responsibility and planning has produced disparities in the quality of care available to our various citizens, a manpower shortage in health and health related professions, inefficient use of facilities and services, staggering cost increases and ignorance on the part of health consumers.

In fact, as we review the many health related activities initiated by both the public and private sector during the last several years, it would almost appear that individuals and groups have worked in isolation from one another and often at cross purposes.

It would seem that planning has been done only on behalf of an individual practice, a group, a hospital, a medical school or a state agency. And under this type of strategy it has been inevitable that many in need of health care, indeed often those most in need--the poor, the minorities, the isolated rural--have not been included in the solutions proposed by the plans.

As part of this message, Governor Lucey announced the appointment of two major groups to deal with health problems in Wisconsin: the Health Planning and Policy Task Force and the Health Policy and Program Council. During the next 18 months, these groups will be charged to develop a comprehensive health plan and policy for the state. This will include health priorities, legislative recommendations and possible administrative reorganization. This group will also seek to identify responsibilities of the government, the providers, the educational system and the consumers.

In the Wisconsin Manpower Projections published in April, 1970, by the Wisconsin State Employment Service, health was cited as Wisconsin's greatest growth industry from 1970-75. The report noted that 40,300 new jobs will open in medical and other health services, an increase of 62.2 percent over the 97,300 persons employed in health fields in 1970.

These Wisconsin projections closely parallel the national increase forecast for health workers by 1980 released in March, 1971, by the U.S. Department of Labor. According to the report in the Occupational Outlook Quarterly, the needs for health workers is expected to increase 62.9 percent, from 3.9 million in 1960 to 6.35 million in 1980. In addition to this number, the report states, Many new workers will be needed each year to replace those who retire, die or leave the field for other reasons."

A number of factors have influenced rising need, both in Wisconsin and on the national level. These include population growth, increased coverage under health insurance plans, and the rising scope of medical services. These same factors will be the driving force behind the continued expansion in employment of health service workers during the 1970's.

Technological developments also contribute to the rise in demand for health workers, according to the U.S. Department of Labor. "The broader scope of medical services now available through advances in medical science and technology, combined with the public's awareness and demand for such services, will continue to expand needs for new and existing types of health workers. Currently, there are more than 125 health occupations that have some 250 secondary or specialty designations," explains the Occupational Quarterly.

This rising need for specialty workers in the health occupations is also reflected in the Wisconsin projections. Although workers included in

the category designated as "medical and dental technicians" is not precisely defined by the State Employment Service report, the need for such personnel is expected to increase 110% in Wisconsin by 1975. Other forecasts relate to the more traditional types of health workers with needs for general duty nurses increasing 60%, licensed practical nurses 60%, physicians and surgeons 48%, psychologists 47%, dentists 35%, medical technologists 23%, and dietitians and nutritionists 22%.

Although State Employment Service projections cover only the period through 1975, national statistics indicate that the pattern of growth in the health occupations will continue through the decade of the 1970's. It also is clear that the task of pinpointing this health manpower shortage, in terms of specific health occupations and/or of sharply defined local geographic areas, i.e. like the WVTAE districts, is a difficult task.

During the compilation of the information contained in this report, several interesting facts concerning the current status of health manpower information emerged. Before considering a number of the existing health manpower studies, some general characteristics concerning the level of the art of health manpower demand estimating should be noted:

1. There is a critical need in Wisconsin to establish a permanent system for the collection and dissimulation of health manpower information, particularly supply versus demand. Wisconsin needs a computerized, on-going data gathering system capable of supplying up-to-date manpower information, both for specific local areas and on a statewide basis, and one which covers the entire spectrum of health occupations.

The existing health manpower data is extremely limited as to the scope of the health occupations to which it pertains. Data

generally reports only statewide statistics, usually two to three years old by the time its research is finally distributed to the decision makers within the health industry. Such limitations in a field rapid by changing transformation as a result of medicine discoveries, new paraprofessions emerging, new treatment techniques, and new equipment, seriously impedes health-education planning.

2. There is a need to generate some acceptable criteria for determining health manpower demands. Since the health industry is very prone to base decisions on labor substitutions (such as the necessity for using a pair of nursing assistants instead of one R.N.), it is difficult to find agreement among employers relative to the need for trained workers at a given level. Some health experts tend to view demand in terms of ideal or recommended standards for proper patient care, such as so many nurses per 100,000 population; while still other health officials view demand with a sharp eye toward current economic conditions, or actual budgeted positions. This is particularly true in hospitals where rising costs are a major concern and where the salary differentials between LPN's and nurse assistants can make a significant difference in a hospital administrator's perception of health manpower demands.
3. The over-reliance by health education planners on existing health manpower data would seem to be imprudent and unwise at this time in view of the limitations of that data. This is not to say that planners should ignore existing manpower data, rather it suggests that planners should not accept such data as being unquestionable.

The result of such a decision in a time of a tight labor market would be to greatly curtail or eliminate educational opportunities. Such action

dramatically militates against the concept held by vocational educators that opportunities for education should be available to all.

In planning for future health education training development, Wisconsin educators must concede they may have to plan with less than optimum information and, therefore, should not unduly limit expansion simply based on this one indicator of need.

With these restrictions concerning the health manpower data in mind, the currently available studies related to Wisconsin's health manpower needs are now described.

Review of Existing Manpower Studies

State Comprehensive Health Manpower's Study²

Included in this report are portions of the State's Comprehensive Manpower Study as it concerns: medical record librarians dieticians and food and nutritionists, sanitarians, public health engineers, sanitary engineers, nurses, and L.P.N.'s.

The major findings related to manpower needs in the above mentioned health occupations are shown in table 1. This study not only treats the qualitative question of gross supply versus gross demand, but also considers the vital ancillary issues of distribution of health workers, and public policy and professional opportunities as related to salaries and promotions. The overall tone of the findings seems to support the need for expanded health-education programs, at least in selected areas and/or occupations. Current supplies of trained health workers do not appear to meet all the demand for educated health personnel.

²Department of Health and Social Services, Health Division of Comprehensive Health Planning, 1969.

TABLE 1

REPORT OF THE HEALTH PROFESSIONS

Health Profession	Present Number	Needs - 1969	Distribution	Trends of Practice	Needs to 1980 Est. pop. - 4,617,000	Remarks
Nurses	1968: 16,800 Active Total - 20,864 83.8% Active	As community health programs expand, more vacancies for personnel educated at the baccalaureate and higher levels will be required.	In 1968, 28 counties were found to have no Home Care Services for lack of qualified supervisory personnel.	The Commission reported only fleetingly its concern about recruitment, but that element is vital to the attainment of the 1978 goal established. In some way high school and college guidance workers must be alerted to the expanding needs and opportunities for women and men in the field of nursing.	20,700 450/100,000	The numbers of persons prepared as nurse assistants in programs of less than one year will and must increase. Use of greater numbers of nurse assistants and L.P.N.'s will permit better utilization of R.N. personnel in Administrative, Supervisory, and General leadership positions --better utilization of all personnel is a major goal to be sought.
L.P.N.'s	1968: 5,396 - Active 539 - Inactive	1 L.P.N. to 2 R.N.'s			11,000	It should be expected that Wisconsin can achieve this number

TABLE 1 (continued)
REPORT OF THE HEALTH PROFESSIONS

Health Profession	Present Number	Needs - 1969	Distribution	Trends of Practice	Needs to 1980 Est. Pop. - 4,617,000	Remarks
Medical Record Librarians		Smaller hospitals are having difficulty in recruiting Medical Record Librarians. One reason may be salary.	Too few people know about the Medical Record Librarian field	In hospitals where there are older Medical Record Librarians, they are not too eager to hire a younger individual. Any-one with more education seems to be a threat to them.		Could take care of the needs of many hospitals, insurance companies and clinics by teaching a course in medical terminology and typing skills.

Health Manpower
needs in the field
of Dietetics and
Food and Nutrition.

A rough estimate of the manpower needs in the field of dietitians indicates there has been a favorable response to recruitment programs over the past several years. At present, approximately three-fourths of the general hospitals in the state are being served by full-time, part-time or consultant dietitians. Nursing homes now show about one-third having services of a dietitian or other suitably trained personnel, and approximately three-fifths of the county institutions have acquired qualified dietary persons. This, in no way, includes any attempt to evaluate the adequacy of service provided.

With the major number of qualified dietitians located in the southeastern part of the state, it appears the greatest need is to develop some means of providing adequate dietary supervision for those less populated areas of the state where it has not been possible to secure trained personnel. These areas are noticeably in the northern one-third of the state and a small section of the southwestern corner.

TABLE 1 (continued)

REPORT OF THE HEALTH PROFESSIONS

Health
Profession

Health Manpower
needs in the field
of Dietetics and
Food and Nutrition.
(continued)

The present trend in institutional food service administration shows a strong development in the training of the non-professional food service worker, both at the supervisory and worker levels through vocational school based courses. It is felt this is a good trend which will strengthen the quality of food service and at the same time facilitate the work of consultant, shared and part-time dietitians.

The apparent needs which might be projected over the next ten years would include:

1. Continue support and encouragement to approved courses in the training of food service workers and supervisors.
2. Continue recruitment of the non-employed qualified dietitian to return to active professional work.
3. Continue in-service education programs to provide the returning dietitian and those already on-the-job with practical current knowledge, skills and procedures.
4. Consider programs which might be developed to assist the Home Economics trained person secure the necessary additional college level academic courses and experience to equip her for dietary consultation work in nursing homes.
5. Consider other ways in which the institutions, located in isolated areas, might plan to meet dietary department standards.
6. Development of an awareness on the part of institutional administrators and dietary personnel to the need for qualified dietary supervision above the minimum level established by Medicare and other regulatory programs.
7. As larger and more complex nursing homes are being planned, attention will be needed to a more adequate quality and quantity of dietary supervision by qualified personnel.
8. An active program to recruit individuals into the field of dietetics will be needed to maintain, if not increase, the number of dietitians available in the state.

TABLE 1 (continued)
REPORT OF THE HEALTH PROFESSIONS

Health Profession	Present Number	Needs - 1969	Distribution	Trends of Practice	Needs to 1980 Est. pop. - 4,617,000	Remarks
Sanitarians		As vacancies occur, there is no reserve to draw from. Low pay scales make recruitment difficult.	Concentrated in southwestern part of State and along eastern shore. For remainder of state distribution is spotty.	It is difficult to recruit a fully trained sanitarian. At state level, we will accept an individual with basic education requirements, engage him at a lower level and train him.	175	
Public Health Engineers and Sanitary Engineers		If positions requested in Div. of Health 69-71 budget were allowed, the Public Health Engineering staff would have to be doubled.	No local levels of government currently engage a Public Health Engineer.	There are no Sanitary or Public Health Engineers at local government level except those engaged by the state in its district offices.	30+	If there is a press for Air Pollution Control, etc., it will be difficult to get Public Health or Sanitary Engineers.

Source: State Comprehensive Manpower Study, 1969

Marshfield, Wisconsin's Report on Manpower Needs³

Marshfield is the largest medical community per population in the state. Health facilities include St. Joseph's Hospital (400 beds, 1,064 employees), the Marshfield Clinic (96 physicians, 380 employees), the Marshfield Clinic Foundation (4 research scientists, 20 employees), St. Joseph's Hospital School of Nursing (12 professional staff, 165 student nurses), Marshfield Convalescent Center (120 beds, 75 employees) and Norwood Hospital (180 beds, 80 employees). Conservative estimates of the health manpower demand for 1973 are 2,038 trained health workers as compared to the currently 1,730 employed. The clinic care needs for allied health personnel in the above listed institutions are not now being met by the health education programs currently available in the district or surrounding areas of the state.

Some six months ago, a survey was conducted of the six medical institutions in Marshfield. As a result, it has been determined that an acute shortage of allied health workers will begin developing about 1973. The Marshfield Clinic now has 96 physicians, and existing plans call for an expansion of this group to 150 by 1975 and approximately 200 by 1980. St. Joseph's Hospital currently a 400 bed hospital, will have to plan to accommodate the increased number of patients who no doubt will be attracted to Marshfield as a result of increased concentration of medical talent. The figures below are based on the survey of the six medical institutions and the need projections up to 1973.

	Total Medical Personnel Employed	Total Allied Health Personnel Employed	Projected 3-Year Manpower Demand
Marshfield Clinic	475	150	600
St. Joseph's Hospital	1,064	542	1,200

Total 3-Year Projection Allied Health Personnel Needed -		1,200	

³ The following information was related to the research team by the Director of District 16, in a letter to Dr. M. Strong on March 18, 1971.

It appears that the most acute shortages will be in the following areas: registered nurses, licensed practical nurses, laboratory assistants, operating room assistants, medical secretaries, physical therapy assistants, and occupational therapy assistants.

St. Joseph's Hospital and the Marshfield Clinic are in the early planning stages for the expansion of the medical complex of Marshfield covering the time period to at least 1980. A very important part of the consideration is the availability of manpower to staff these facilities, with particular emphasis on allied health personnel.

It would seem that the district has an obligation and responsibility to become partners in the development of a comprehensive health occupations program to meet the needs so positively evident. (For additional information, contact Frederick J. Wenzel, Executive Director, Marshfield Clinic Foundation, Marshfield, Wisconsin.)

Survey of Present and Future Health Occupation Employment Needs, District 18

This local study illustrates that a health manpower shortage exists in several allied health occupations. The study is limited to the four county area of District 18. It serves as an additional example of how rural health manpower needs can be obscured in statewide statistics. It is noteworthy that this study includes manpower information for other health occupations in addition to the nursing cluster. See Tables 2 and 3.

The Milwaukee Area Technical College Survey⁴

In 1970 personnel of the Milwaukee Area Technical College conducted a survey of the health occupations labor demand for District 9 with a particular interest in estimating the impact of the phasing out of several hospital diploma nursing programs on the supply of nursing manpower. This report has at least three specific areas of interest for the purposes of this assessment:

1. It identifies local health manpower shortages.
2. It illustrates the changing nature of nurses training education, i.e., hospitals rapidly phasing out of nurses training and thereby creating a vacuum in the nurse manpower supply.

⁴Survey of Health Manpower Needs, Milwaukee Technical College, 1971.

3. It demonstrates that even in the State's largest urban center current health occupations education programs are not meeting the total demand for skilled labor.

The reader should note that Table 4 indicates a yearly manpower need of approximately 63 operating room assistants while Table 16 in Chapter II shows that currently the courses for operating room assistants at Milwaukee Area Technical College graduate about 22 per year.

Table 5 illustrates the increases that will be needed in the Milwaukee Area Technical School nursing program in order to offset the loss of nursing personnel formerly trained in hospital school nursing programs. Subsequent to the Milwaukee survey, two additional hospital nurses training programs have announced they will phase out their operations by September, 1971 (see Table 13, Chapter II). This will result in even greater shortages in nursing personnel than Tables 6 and 7 indicate. These two hospital diploma nursing programs accounted for 42% of the total number of students admitted to hospital school programs in the greater Milwaukee area.

Health Manpower Summary by State District of 155 Acute Short-Term General Hospitals in Wisconsin as of September, 1969⁵

Included are preliminary statistical data of surveys taken of nursing services, technical services, therapeutic services, qualified dietitians, home economists, food service manager, registered record librarian and pharmacist services. See Tables 8-11.

This survey was conducted by the Bureau of State Planning in 1969, and included only general hospitals with no attempt to consider the health manpower needs of nursing homes, public health agencies, clinics or physicians offices.

Map A is included to assist the reader in relating information to specific geographical areas.

WISCONSIN STATE DISTRICTS

26

MAP A

The data in Table 8 indicates a strong labor demand for nursing personnel throughout the state with the area of greatest need being R.N.'s (need = 980). When the manpower need for RN's is compared to the WVTAE production of RN's (Table 14, Chapter II) it is seen that WVTAE schools graduated only 62 associate degree nurses in 1969-70. This represents only six percent of the needed production of registering nursing personnel. Coupled to this limited WVTAE training capacity is the rapid phase out of hospital school diploma programs. The conclusion one derives from those two facts seem to support a need for expanded associate degree programs throughout the WVTAE system in order to compensate for the phase out of hospital schools and to meet additional demands for nursing personnel.

In looking at the labor demands in other health fields, the x-ray technician stands out as an occupation of need that is not being served by the vocational system. Two programs are projected to start in 1971. This health occupation now employs more than 700 workers in Wisconsin and has an unsatisfied labor demand for 69 technicians.

This statewide health manpower survey indicates that the WVTAE schools are meeting many of the needs in most health fields but in others manpower needs continue to exist.

The Report of the Commission on Statewide Planning for Nursing Education⁶

During 1968-69, at the request of the Governor, a commission on statewide planning for nursing education was charged with conducting an in-depth analysis of Wisconsin's nursing personnel needs for the future (the next five years). The membership of this commission reflected the various public sectors concerned with nursing care, i.e. professional associations, educators health officials, representatives of government health agencies and the general public. The work of the commission is to be commended; the following brief

⁶Nursing for Wisconsin's Future, Commission on Statewide Planning for Nursing Education, 1970.

summary of its report is offered for the information of the reader of this assessment.

Commission Conclusions, Goals and Recommendations

In formulating its recommendations, the Commission on Statewide Planning for Nursing Education has considered current trends, health needs, changes occurring in the health care system, availability of nursing manpower, types of practitioners needed, and resources. Since accurate projecting of precise needs over a ten-year period are difficult to determine, the Commission recognized that its recommendations should not be rigidified. The Commission also suggested that a continuing agency be established to annually review its recommendations, ascertain progress, and make any revisions warranted by changing circumstances.

Nursing Education Programs

Wisconsin needs general nursing practitioners prepared at all levels (baccalaureate, diploma, associate degree and practical nurse) for staff positions in hospitals, nursing homes and other health agencies and to function as members of nursing teams and/or as team leaders. To assure adequacy of nursing service, a great need also exists to prepare more nurses for teaching, leadership and administrative positions.

In considering the need for nurses in relation to educational preparation and in harmony with established principles of accreditation, the Commission recognized the importance of establishing educational qualifications for specific positions and recommends as aspirational goals over the next decade:

1. Baccalaureate degree for nurses holding positions as: head nurses, team leaders, staff nurses in community health nursing (public health, occupational health, school health), assistant instructors who work with a master teacher, directors of nursing or nursing service in small hospitals under 100 beds, and directors of nursing in nursing homes giving skilled care;
2. Master's degree in nursing for nurses holding positions as: faculty in nursing education programs, master teachers and "clinical specialists," administrators of nursing education programs on the undergraduate level, in-service education directors, supervisors, coordinators of patient care, and consultants, directors and assistant directors of nursing service in hospitals over 100 beds and in community health agencies.
3. Doctorate for nurses in positions as: administrators and faculty of collegiate programs and in research.

The Commission recognized that the employment picture is fluid, and that the effectiveness of educational programs will impinge upon the supply and demand of persons possessing these educational credentials.

Improved practices in nursing undoubtedly will affect educational preparation required by practitioners. These goals, therefore, ought to be examined and modified, if necessary, in light of innovations in the delivery of nursing service.

With respect to nursing education programs in the various categories, the Commission:

Diploma Programs

1. Recognizes that present hospital schools of nursing, which prepare the largest number of R.N. graduates in the state, are needed and should be continued, though no additional diploma programs should be established.
2. Urges that diploma schools not only continue their own self-evaluation, but with others in the community, ascertain their future role in the preparation of nurses. Consultative assistance available from the Board of Nursing and the follow-up agency for the Commission should be utilized in shaping the destiny of diploma schools in the light of evolving trends. The Commission offers to hospitals for consideration these alternatives;
 - a. Expansion of presently viable schools;
 - b. Cooperative programming or consolidation with other schools where indicated and feasible;
 - c. Changing the nature of their participation in nursing education by making clinical facilities available to other education programs.
3. Suggests that diploma schools evaluate their curriculums and consider the modifications of the length of their current program efforts in light of general societal changes, changing concepts of health care, changing roles and responsibilities of the registered nurse and developments in technology and teaching methodology.

Associate Degree Programs

1. Recognizes that the associate degree program lends itself to being the quickest and most practical route toward relieving the supply-demand imbalance in Wisconsin;
2. Looks to the state's vocational-technical institutions, presently being organized along viable district lines, as the prime vehicle for providing the educational experiences relevant to A.D. education;
 - a. Recommends that the A.D. program in nursing education at the Milwaukee Technical College increase its enrollment immediately;
 - b. Recommends A.D. programs in nursing education be established in qualified technical institutes and other institutions of higher education, those moving toward a state of readiness including Green Bay, Kenosha-Racine area, Madison and Wausau (program initiated in September, 1969, following preliminary report of the Commission);

3. Recommends that in communities where appropriate educational opportunities exist at University of Wisconsin, Wisconsin State University or private institutions of higher education, a cooperative relationship be established between such institutions and the technical institute to enlarge offerings in nursing, to conserve faculty and to reduce cost and duplication of programs through the use of available resources;
4. Recognizes that the development of associate degree programs in nursing education in the emerging vocational-technical system offers a new direction in the preparation of nurses both to the State and to the rapidly forming vocational-technical districts. The Commission, therefore, offers the following guidelines in order to assist in the development of quality programs;
 - a. Desirability of "recognized candidate for accreditation" status with the North Central Association of Colleges and Secondary Schools;
 - b. Desirability of A.D. programs in other fields;
 - c. Preparatory programs in other health occupations;
 - d. A qualified registered nurse with a minimum of a master's degree has the authority and responsibility for the development and direction of the associate degree program in nursing education only;
 - e. Adequate clinical facilities are available for student experience.
5. Urges that the director of an associate degree program be employed at least one year prior to admission of students to allow for adequate planning of curriculum, recruitment of faculty and for arranging clinical facilities;
6. Suggests that the desirable preparation for principal, or lead, faculty in associate degree programs in nursing be a master's degree in nursing.
7. Alerts vocational-technical leaders at the state and local levels to the necessity to provide adequate supervision for nursing students in the clinical setting.

Practical Nurse Programs

1. Believes that the existing twelve (12) practical nursing education programs need to be augmented only by the addition of a new program at the Eau Claire Technical Institute, with the use of clinical facilities at Chippewa Falls and Menomonie, to provide a sufficient base of supply into 1978 (This would avoid erosion of clinical facilities of the existing baccalaureate program at WSU--Eau Claire);
2. Supports the expansion and strengthening of existing programs at LaCrosse, Neenah, Sheboygan, Stevens Point and Superior, as opposed to development of new programs (other than at Eau Claire);

3. Suggests that schools of practical nursing explore further team teaching techniques, improved utilization of faculty and joint planning with other agencies for the cooperative use of clinical units to assure proper balance among the various levels of nursing education programs in the utilization of available community or regional facilities;
4. Recommends that educational institutions study the feasibility of career mobility for licensed practical nurses through establishment of criteria and an examination for granting credit for knowledge and experience acquired which will be applicable to practical nurses seeking admission to associate degree programs in nursing;
5. Recommends that refresher programs be made available for licensed practical nurses who have been inactive in nursing. It is suggested that terminology for refresher courses and continuing education programs be differentiated.

Nursing Assistant Programs

1. Recommends that vocational schools be encouraged to offer and to expand pre-service education programs for nursing assistants on an area basis and to collaborate and cooperate with hospitals and other agencies relative to the preparation of nursing assistants for health agencies. It is further recommended that health agencies supplement education with introduction to the specific job within the employment setting;
2. Recommends that vocational schools in urban areas expand their programs to accommodate larger enrollments.

While the survey of nursing manpower is the most comprehensive study of its kind conducted, several factors may reflect on its findings:

1. The data used in the report is generally 1969 data, and since then, several significant changes have taken place in Wisconsin's nursing education--most notably the increased rate at which hospital diploma school programs have been phasing out.
2. The figures cited in the commission manpower statistics are statewide figures based on sample survey techniques. These statistics do not reflect specific local health manpower needs as do some of the regional manpower studies previously cited.

3. The commission's recommendation that no more LPN programs be started does not seem to be consistent with the fact the ratio of LPN's in Wisconsin is far below the recommendation of the Surgeon General's Report.
4. The recommendations that qualifications for nursing faculty be raised, requiring the M.S. degree by 1975 seem to be unrealistic in view of the current difficulty schools encounter in hiring qualified staff under present standards.

Summary

Analysis of the manpower data compiled for this assessment, as well as discussions held by the Wisconsin Advisory Council for the purpose of ascertaining the health occupation needs in the state, point to the fact that shortages do exist in the state for health manpower services. The real question concerns which areas of the state have the most critical shortages and the magnitude of the shortage.

Wisconsin's health occupation manpower shortages are predicated upon the consideration of the locality being discussed and the economic trends of the country as a whole. An article published in the Milwaukee Journal on May 9, 1971, illustrates this fact. According to this newspaper report, hospital officials in Milwaukee noted that the economic pinch has begun to affect hospitals, easing the demand for beds and the chronic shortage of nurses; but administrators expect that the effect will be temporary. The news release also stated that at Milwaukee County General Hospital the greater availability of nursing has made it possible to change rules on full-time and part-time for more efficient scheduling. However, in the advertisement section of the Journal, numerous advertisements appeared

TABLE 12
 PERCENTAGE DISTRIBUTION OF NURSING PERSONNEL
 EMPLOYED IN WISCONSIN HOSPITALS
 JANUARY 1, 1969

The Surgeon General's Report recommended as a desirable national average that the proportion of nursing personnel for giving direct patient care be 38% registered nurses, 30% licensed practical nurses and 32% nursing assistants. The following table shows the mix of staffing in Wisconsin hospitals in 1968 and 1969 as compared with the recommended reasonable goals of the Surgeon General's report:

Staffing in Wisconsin Hospitals			Recommended Reasonable
	1966	1969	Goals
Registered Nurses	35.4%	36.4%	38.0%
Licensed Practical Nurses	10.2%	11.7%	30.0%
Nursing Assistants	54.4%	51.8%	32.0%

Source: Report of the Commission on Statewide Planning for Nursing Education, December, 1970.

for all types of health manpower workers. A count of these advertisements for a period of time showed a continuous demand for health manpower needs on the part of hospitals in the Milwaukee area.

This Spring the Wisconsin State Advisory Council on Vocational Education conducted two symposiums regarding health manpower needs in Wisconsin. At one of these sessions reports were received from hospital administrators concerning the shortages of health manpower services in West Bend, Fennimore, New Glarus, Neilsville, Racine, and other more rural areas of the state. At the other symposium representatives from the states health agencies and the major health professions seemed to infer that overall, the current health regulations and training programs were substantially meeting Wisconsin's health manpower needs.

This apparent inconsistency points both to the ambiguity and inadequacy of current health manpower data and also to the present need to re-evaluate how well existing health programs are serving the various areas of the state. The question of equity of access to Wisconsin's health education programs and/or equality of health care available throughout the various geographic regions of the state is paramount in any analysis of future health education planning.

Undoubtedly the many formidable barriers that presently prevent people in some Wisconsin cities and towns from sharing the benefits of first class modern medical services are not easily eradicated. What is needed however is a commitment on the part of health educators and health professionals to creatively attempt to find solutions.

CHAPTER II

EDUCATIONAL OPPORTUNITIES IN ALLIED HEALTH OCCUPATIONS

Generally speaking, four principle types of training opportunities are available to a person interested in pursuing a career in allied health occupations in Wisconsin:

1. On-the-job training programs conducted by hospitals and clinics;
2. Hospital schools' diploma programs in certain health occupations;
3. Health occupations training programs offered by Wisconsin Vocational, Technical and Adult Education Schools;
4. Health occupation programs offered by universities.

Not all of these alternatives are available for any single allied health field, and for many geographic areas opportunities are quite limited since most opportunities are available in the most heavily populated area of the State.

Presently, one or more of the above mentioned types of educational facilities include training programs of less than bachelor degree level in the following health occupations: dental assistant, dental hygienist, dental laboratory assistant, inhalation therapist, medical assistant, medical laboratory assistant, technical nursing (R.N.), practical nursing (LPN), occupational therapy assistant (OT), operating room assistant, optometric assistant, ward clerks, nursing assistant, environmental health aide, physical therapist assistant, hospital food service, radiation technician and medical records (See Appendix A).

The following tables illustrate the various kinds of allied health occupation training programs available today in Wisconsin and where such programs are offered. Due to the rapid expansion in the number of emerging new health occupations, even this rather extensive listing does not represent the entire field of related health occupations. Thus, while Wisconsin can justly pride itself on past growth in the field of health education, the ever-increasing challenge of change is very great.

Health occupations educational opportunities will need to expand greatly if the requirements for qualified people are to be met, as well as educational opportunities for youth.

Several hospital diploma programs have been terminated during the last few years, and at least three of the diploma programs listed in Table 13 will be terminated by the end of 1973. High program costs and the difficulty in securing qualified teaching personnel (who can be spared from other duties directly related to the hospital's primary mission-- dispensing health care) have generally been cited by hospital administrators as reason for phasing out nurses training programs in hospitals.

In order that a picture of the potential of the Wisconsin Vocational, Technical and Adult Education systems for serving the State geographically can be visualized, Map C provides the location of full-time schools. Although each of these has a potential for offering health occupations programs, from the standpoint of both administration and cost, it is often more practical to group or concentrate programs in fewer number of schools.

Map D provides information on programs approved for operation in VTAE schools as of July 1, 1970.

Tables 14 and 15 provide a complete picture of health preparation programs in VTAE schools. The projected growth in numbers of programs can readily be seen. Also, enrollments in 1969-70 can be compared with actual and projected enrollments for 1970-71. Projections in enrollments are shown through 1973. While there are some omissions in the tables because information or projections were not available, the tables clearly reflect a pattern of growth and a projection of additional growth through 1973.

Source: Staff of WVTAE

A survey of the 18 VTAE districts was conducted in an attempt to determine the number of students served by occupational areas in each district. Districts were also asked to provide the ratio of applicants to those accepted. While no attempt was made to determine the qualifications of the applicants, it can be assumed that in most cases a large percentage of them did meet minimum standards.

In planning programs in vocational and technical education, the philosophy that the program should serve the needs of all people who can profit by the instruction is quite broadly accepted in principle. Also, as a general principle in American education, it has been believed that a student, within some practical limits, should have the opportunity to pursue education for any occupation for which he is qualified. Facts provided by each of the districts quite clearly seem to indicate that in some districts and in several of the occupational areas, opportunities for many seeking health education programs were not available (See Table 16).

Source: Health Occupation Survey of the 18 WVTAE Districts conducted by CERS in March-April, 1971.

There is no way to determine the actual number of on-the-job training programs, but these are usually confined to those health occupations requiring the least amount of formal preparation. The registry and licensing procedures described in Chapter IV dictate that most of the more sophisticated health professions require accredited formal training preparation.

In addition to the four types of educational programs previously discussed, there also exist three other categories of training programs. While still relatively small, they do contribute to the total production of the State's health occupation manpower and include: (1) the recently inaugurated high school programs in health occupations; (2) the U. S. military's medical corps programs for training service personnel in health fields; and (3) the apprenticeship program.

The first high school program in health occupations began in Wisconsin about three years ago. These programs are offered in a very few high schools (See Table 17), although interest in such curricula is increasing.

Most of these programs are vocationally exploratory in nature, rather than directed toward job preparation, per se. There is still an unresolved philosophical dispute among program planners at the secondary school level and health professionals as to the proper mission of Wisconsin high schools in the fields of health occupations. Until some decision to the contrary is made, it appears that most of the high school health occupation programs will not figure significantly in the immediate production of health manpower.

Listed on Table 17 are the schools currently offering programs and those who expect to offer programs in the 1971-72 school year. The table represents the situation as of April, 1971.

Source: Wisconsin Department of Public Instruction

The U. S. Military Medical Corps provides other auxiliary opportunities to Wisconsin citizens interested in health careers. In recent years, this option has become increasingly important as many returning veterans with military training and experience in health have sought to pursue civilian careers in health occupations. Unfortunately, the transfer of such military training into civilian careers is frequently restricted as a result of licensing and/or registry requirements. Few of the traditional health careers training programs recognize or give advanced credit for a GI's previous military training.

In 1970, the Department of Defense initiated a MEDIHC program (Military Experience Directed into Health Careers) designed to attract former Medical Corpsmen into civilian health occupations. In January, 1971, the Wisconsin Health Council was named the State's operating agency for the MEDIHC program with funding provided by the State Manpower Council.

Although some 200 former Corpsmen have now been referred for employment and/or education through MEDIHC, there is an urgent need for Wisconsin's health officials, both educators and those who license and regulate practitioners, to provide better means for utilizing this manpower potential. Licensure and registry restrictions, coupled with a lack of meaningful proficiency testing, create a waste of experienced and dedicated manpower.

Another new training program for health careers in Wisconsin is the proposal to develop a health occupations apprenticeship program. The "Task Force on Health Occupations," representing members of the professional health occupations associations and the State Apprenticeship Board, have been meeting to discuss such a program. The first report is now available and recommends the establishment of apprenticeship programs in several health fields.

Basically, the program would function similar to apprenticeship programs in more traditional fields. The apprentice would be indentured to a practicing professional at a hospital or clinic, and through a combination of practical experiences and associated classes, would be trained to perform the functions of the profession.

Many questions have been raised concerning the applicability of this training approach to health occupations, but program supporters are enthusiastic. It is likely that some experimentation in this area will be implemented in Wisconsin during the coming years.

Commentary

Wisconsin's current system of health occupation education appears to:

1. Unduly limit the educational opportunities of the State's rural population relative to career preparation in health occupations.
 - a. Students from rural areas must now travel long distances and/or relocate to participate in many of the educational programs required as preparation for the major health occupations, e.g., LPN's, dental hygienists, inhalation therapists, occupational therapy assistants.
 - b. Students from certain rural areas, where health occupations training opportunities are very limited, are at a disadvantage when competing for entrance into health training programs in the State's publicly supported education facilities.
2. Fail to provide the needed qualified professional health workers throughout the State.

- a. Since the training of health workers has been largely confined to the more populated regions of the State, the supply of qualified health personnel in rural areas is severely limited. Although the rural citizens' need for quality health care is as great as that of the State's urban population, the supply of trained health occupation manpower is concentrated within the State's urban areas. By failing to encourage health workers to remain in the rural areas by providing few opportunities for professional growth through continuing education, the State appears to reinforce this flight from rural areas to the cities.
- b. Because the development of educational programs for licensed practical nurses has not kept pace with the growth in programs for training nursing assistants or registered nurses, Wisconsin appears to have created a serious gap in available nursing manpower. This lack of middle-level nursing personnel could result in a reduced quality of patient care fostered by over-reliance on the use of nursing assistants; and/or poor utilization of the State's limited supply of registered nurses; and under-utilization of licensed practical nursing help in providing direct patient care (See Chapter I, Table 12).

An examination of Wisconsin's current health occupations educational programs reveals a strong base of experienced health educators and qualified health training facilities, but a need to expand existing health occupation educational opportunities. This expansion must be diverted toward the

development of training programs in new allied health fields, and the implementation of health occupation training programs in new areas of the State not now served by the existing system. The development of health occupation education must be guided not only by the growing need for trained manpower, but also by the State's traditional dedication to serve the educational needs of its citizens. While it is unwise to train people for occupations where there are no opportunities, it would appear to be impossible to improve the quality of health service without an increased supply of trained manpower.

CHAPTER III

HEALTH OCCUPATION SURVEY OF THE 18 WVTAE DISTRICTS

To secure local information and opinions concerning current and future health career educational programming in the Wisconsin Vocational, Technical and Adult Education system, the research staff mailed a questionnaire to all eighteen WVTAE district directors. The purpose of the research was to determine each district's health manpower needs, training programs, enrollment, and future educational plans for programming.

In addition to this data collection, the survey provided the opportunity for district level personnel to express their opinions to identifying the impediments to health program development, the future needs for health training programs, and the types of auxiliary assistance available to help the districts plan new training programs in health occupations.

All eighteen districts were cooperative; the survey enjoyed 100 percent return. The information concerning manpower needs, the current training programs and enrollments were included in previous chapters dealing directly with those topics. In this chapter will be examined the survey's findings of questions concerning training plans, future health program needs, restrictions to program development in health occupations, and the types of assistance available to local districts in developing health occupation education.

A letter and questionnaire were sent to each District Director. A copy can be found in the Appendix. It was indicated that individual responses would be used only by the Survey Staff so as to solicit candid

answers. Cover letters indicated that usually the Director called upon other staff assistance in responding and even though it was not requested that the persons be listed or that the questionnaire be signed it is assumed that the responses represent the perceptions held by the District Director and his staff.

c The Results of Health Occupations Survey

Following are questions asked from the survey instrument with frequency response listings.

Question: What new programs in the field of health occupations do you feel should be developed by the vocational school (or schools) in your district?

Replies:

Number of Districts

Technical Nursing	8
Ward Clerk & Nurse Assistant	8
Operating Room Assistant	6
Physical Therapist Assistant	5
Practical Nursing	5
Medical Lab Assistant	4
Occupational Therapy Assistant	3
Hospital Administrator	3
Mental Health Aide	3
Radiology Technician	2
Inhalation Therapist	2
Medical Record Technician	2
X-ray Technician	2
Home Health Aide	1
Medical Record	1
Dental Assistant	1
E. E. G. Technician	1
Hospital Pharmacist Aide	1
Funeral Parlor Assistant	1
Medical Secretary	1
Dietary Aide	1
Dental Lab Technician	0

Question: "What present programs should be expanded?"

<u>Replies:</u>	<u>Number of Districts</u>
LPN's & Nursing Assistant	8
None	8
Ward Clerk	6
Operating Room Assistant	3
RN's (Technical Nursing)	2
Dental Lab Technician	2
Inhalation Therapy	1
Environmental Health	1
Optometric Assistant	1

Question: "What are the major deterrents to developing and/or expanding health occupation training programs in the vocational schools of your district?"

Rural districts commented as follows:

Replies: "Apparent lack of readiness on the part of major health agencies to provide clinical facilities for training."

"Qualified faculty, clinical practice facilities, release of faculty for program development."

"Limited clinical facilities, limited financial base for program development."

"Must have North Central accreditation. Qualified staff, qualified clinical areas."

"The faculty standards set by Division of Nursing complicated by difficulty for 3-year Registered Nurses to receive credit for their academic work and enroll in pertinent courses that lead them to Bachelor's degrees."

"Rigidity in development procedures, difficulty in developing innovative new types of training programs."

"Approval for clinical experiences for nursing students in health agencies."

"The so-called need for North Central accreditation."

"The Governor's Commission on Nursing has recommended no more practical nursing programs be established. The Nursing Board and the State VTAE are abiding by this directive, i.e., no more LPN programs."

"Need for North Central accreditation."

"Rigidity and inflexibility of approval procedures."

"Prohibition of vocational extension offerings to RN's and LPN's.

"Lack of professional personnel in fields such as Medical Records which limits quality clinical facilities for student education."

NOTE: For the purpose of this Assessment, Districts 1, 2, 3, 5, 14, 15, 16, 17, 18 were considered predominantly rural districts while Districts 4, 6, 7, 8, 9, 10, 11, 12, 13 were considered urban districts.

Urban Districts made the following comments:

Replies: "Advisory Committees, local need studies."

"Authorization by state agencies is slow in coming. Lack of approved clinical stations in hospitals."

"Transfer credit, new facility incomplete, not finished with North Central accreditation."

"Clinical facilities, qualified staff placement, multiplicity of agencies with varying requirements and standards. Aid available for on-going programs only. Need aid to start programs."

"Gaining approval from State approval boards."

"Facilities and faculty."

"Lack of funds primary reason for not starting two newly-approved programs as stated above. Lack of prepared faculty in professional area (need workshops and short term program for faculty).

"Need for better scheduling by all schools of nursing and utilizing clinical facilities."

"Staff, qualified facilities, limitation by State Board of Nursing."

Question: "If you have allied health programs, what were the most difficult problems in developing the programs? Be specific."

Replies:

Number of Districts

Gaining North Central accreditation	7
Lack of Financing	7
Lack of qualified faculty	6
Securing State WVTAE Approval	6
No Problems	4

Finding adequate facilities for clinical practices	4
Requirements of professional organizations	3
Securing State Board of Nursing Approval	3
Developing Curriculum	2
Lack of facilities	1

Radiological Technicians	1
Dental Hygienists	1
Dental Assistants	1
Pharmacist Assistants	1
Inhalation Therapy	1
Nursing Assistants	1
Ward Clerks	1
Medical Records	1
Psychiatric Assistants	1

Observations

Responses clearly indicated that a number of districts believed that health occupations programs should be expanded in their districts and that new programs should be developed.

Directors generally expressed opinions identifying deterrents to program development. While some items mentioned might be considered as goals to be achieved or standards to be met, there is clearly a

feeling among many vocational administrators that the "road blocks" to program development in this field are almost, if not in fact, insurmountable.

In response to the questions concerning assistance provided, responses are less positive than might be expected. This may suggest that staffs of the vocational board and regulatory groups should be aware of opportunities to promote, assist and help in overcoming possible restraints to program development.

The placement record of graduates appears to be excellent. There is also indication that additional graduation could be placed in productive health job situations and that there are in fact many, varied opportunities for youth in health occupation.

CHAPTER IV

REGULATIONS, LICENSING AND ACCREDITATION

The responsibility for meeting health care needs and for providing qualified personnel in adequate numbers is a responsibility shared by many agencies and individuals. Among these are the agencies and personnel concerned with State regulations, licensing and accreditation. In Wisconsin, the State Board of Nursing and the State Board of Dentistry are delegated authority by the State to set minimum standards for licensure and/or program accreditation in health occupations. Their role, which is concerned to a great extent with the control of the quality of the personnel practicing in the field, must by implication at least, be concerned also with providing leadership for developing an adequate supply of health practitioners. More succinctly stated, they have a responsibility for not only the quality of the personnel but also for the adequacy of and availability of manpower to provide essential health care for the citizens of Wisconsin.

Regulations Governing Training and/or Practice in the Allied Health Occupational Fields

These regulations in three categories (licensing, registry, and accreditation) affect the development of training programs and, consequently, to a great extent, determine and control the supply of trained manpower in the paraprofessional health fields.

Licensure

Licensure is established by law and covers the following fields: Registered Nurse (RN); Licensed Practical Nurse (LPN); Dental Hygienist; Dental Technologists (DLA) (DLT); and Dental Assistants.

Ideally, licensing laws perform two functions: They protect the public against unfit and inept practitioners of professions or occupations affecting the public health and safety, and they permit various professions and trades to advance from a common set of minimum standards.

The statutory powers and duties of the State of Wisconsin Board of Nursing in providing nursing manpower are as follows:

- (1) Establish minimum standards for schools of nursing, professional and practical.
- (2) Establish rules to prevent unauthorized persons from practicing professional nursing.
- (3) Approve surveys or programs in nursing and determine whether the minimum standards are met.
- (4) Place programs meeting the standards on the state accredited list.
- (5) Grant certificates of registration and licenses by interstate endorsement.
- (6) Award scholarships to graduate registered nurses of Wisconsin for advanced education and promote the training of practical nurses through support of institutes and workshops.
- (7) Revoke, suspend, or deny certificates of registration and licenses for cause.
- (8) Appoint the members of the Examining Council on Registered Nurses and the Examining Council on Licensed Practical Nurses.
- (9) Make a study of nursing education and initiate action to approve it.

Their duties indicate the scope of influence and/or control which the Board of Nursing has, or could have, over the training of manpower in the field of nursing.

Licensing of Registered Nurses and Trained Practical Nurses requires the passing of a written examination prepared by the examining council on Registered Nurses and the examining council on Practical Nurses, respectively, as subject to the approval of the State Board of Nursing.

Members of both councils are appointed by the Board of Nursing upon nomination by Wisconsin Association of Licensed Practical Nurses, the Wisconsin Nursing Association and the nurse faculties of existing programs.

Functions of the councils are to:

- (1) Establish rules for the conduct of examinations for professional and practical nurses subject to the approval of the Wisconsin State Board of Nursing.
- (2) Select and administer the examination and determine the passing score.
- (3) Grant certificates of registration or licenses by examination.

The licensing agent for the dental occupations is the Wisconsin State Board of Dental Examiners. Like the Wisconsin Board of Nursing, the State Board of Dental Examiners is established by statute and empowered to formulate rules and regulations to control the education and/or practice of professional dental health workers in Wisconsin. As is the case with the State Board of Nursing, the State Board of Dental Examiners publishes its rules and regulations as part of the Wisconsin Administrative Code.

National Registry

National professional societies have established a system of national registry which works through a process of both accreditation of training

programs and the administration of national qualifying exams. Unlike licensing, registry carries the force of tradition rather than that of law. The American Registry of Radiologic Technologist (ARRT), the American Association of Inhalation Therapist, and The American Association of Laboratory Technicians are among the most influential professional societies to use registry to control the quality of their membership. The effect of registry is almost as strong as the control of licensure.

Among the professions using registry are:

- (a) Cytotechnologists
- (b) Histologic Technicians
- (c) Medical Laboratory Technicians
- (d) Certified Laboratory Assistants
- (e) X-ray Technologists
- (f) Nuclear Medicine Technologists
- (g) Radiation Therapy Technologists
- (h) Inhalation Therapy Technologists

Accreditation

The practice of evaluating training programs and/or institutions for many health occupations is both required by law and demanded by national registry requirements as a pre-requisite to acceptance of a health program curriculum. For example, the Wisconsin Administrative Code section N1.02

Legal Authority states:

The Wisconsin statutes provide that the board may establish minimum standards for schools for nurses and trained practical nurses licensed under this chapter, and make and provide periodic surveys and consultations to such schools. In order to facilitate this responsibility, the board accredits schools and associate units and approves extended units.

The Rules of the State Board of Nursing provide very detailed requirements for nursing programs. Included are such topics as organization and administration of the school, faculty, students, instruction, evaluation, educational facilities, housing, and clinical facilities. The rules are quite precise and obviously designed to assure quality programs. It does not seem appropriate to discuss the specific requirements in detail or even to reproduce them as a part of this report, since copies can be secured by anyone who is directly concerned.

It seems fair, however, to comment generally on the requirements. In the writer's opinion as compared with similar requirements, in other states, they are somewhat rigorous. On the one hand, they may be viewed with a source of pride in that they represent optimum requirements of which the State may be justly proud. Looking at them from the prospective of vocational education administrators struggling to meet program demands, they are viewed by many as too restrictive and difficult to meet. This, coupled with the fact that school administrators in vocational education have been used to working in an administrative framework where there was considerably more latitude and local autonomy in their program development and operation, seem to place in many cases, school administrators in almost an adversary relationship with those charged with enforcing the rules.

Accreditation by Other Organizations

The Rules of the State of Wisconsin Board of Nursing requires that: An institution which conducts a school or which serves as an associate or extended unit shall be approved/accredited by recognized agencies. These include:

- (a) North central association of colleges and secondary schools. The degree granting institution conducting a basic program in nursing shall be accredited by the north central association of colleges and secondary schools or show evidence of recognized candidacy for accreditation. This accreditation is also required of a college or university which provides courses for students enrolled in a diploma program in nursing.
- (b) Joint commission on accreditation of hospitals. 1. A hospital which provides one or more of the 5 major clinical fields (medical, surgical, pediatric, obstetric, and psychiatric) shall be accredited by the joint commission on accreditation of hospitals.
2. Nursing homes and extended care facilities shall be accredited by the joint commission on accreditation of hospitals.

While a number of directors have suggested that the requirement of accreditation by North Central Association of Colleges and Secondary Schools has been a problem, with the exception of schools in a few districts, this hurdle has been overcome. (See Table 18).

TABLE 18

18	None

It should be noted that a number of health occupations are not regulated by either licensure, national registry or program accreditation. These educational programs depend only on the internal approval of the governing bodies of the training facilities and the WVTAE Board in the case of the vocational system.

The following health occupations are among those generally not regulated by licensure, registry or accreditation: Nursing--Nursing Assistant, Ward Clerk, School Health Aide, Operating Room Assistant; Para-Medical--Electroencephalograph Technologist, Occupational Therapy Assistant, Physical Therapy Assistant, Inhalation Therapy Assistant, Environmental Health Technologist, Medical Electronics Technologist, Radiological Technician, Medical Record Technologist, Optometric Assistant.

Conclusion

Vocational educators continue to be frustrated in program development in health occupations because of the many controls by regulatory bodies, the professional groups, and accrediting agencies. Rules and practices established in good faith are often found to be, or are interpreted as restrictive in program development and operation. Some rules are believed responsible for requiring unnecessary program expenditures.

It is not the writer's intention to pass judgment on the requirements because this can only be accomplished by those responsible for establishing them. However, it does seem appropriate to suggest concerns expressed. Hopefully, educators, those responsible for establishing and administering standards, professional groups and consumers of health services will continue to review and bring about changes in requirements if they are found to be restrictive to providing health manpower as opposed to the positive effect of assuring quality personnel for which they were designed.

CHAPTER V

RECOMMENDATIONS

Following are the recommendations of the Wisconsin Advisory Council on Vocational Education which were discussed, refined and approved at a full day meeting on July 28, 1971.

In presenting these recommendations, the research team and the Advisory Council wish to state clearly that the Wisconsin Board of Vocational, Technical and Adult Education is to be commended for the development of the many programs in the health occupations area and for the growth projected in the next few years. The concern of the leadership in Wisconsin for maintaining high quality is commendable. There is little question but what programs in operation are of fine quality.

Recommendation 1

That the Wisconsin Board of Vocational, Technical and Adult Education undertake to adopt those policies which will facilitate greater growth of health occupations workers in the rural areas of Wisconsin through the expansion of educational programs, both job entry and continuing education.

Statement: To a great extent, program development has been concentrated in the more populated areas of the State, a factor which appears to create geographical gaps in needed training programs in the more rural areas. The health manpower needs and consequent requirements for providing training opportunities

in the rural areas of Wisconsin are not being met at the present time through existing vocational and technical programs.

Recommendation 2

That the Wisconsin Board of Vocational, Technical and Adult Education, prior to Board approval or disapproval of a potential (proposed) health occupations program, encourage in each of the 17 districts the development of a think committee to study and evaluate needs for health workers by type in that district. Composition of this committee should include a broad representation of health professionals, health planners, civic leaders, consumers and vocational educators.

Statement: Growing public concern with the high cost of health care, the quality and availability of health services, and the accessibility into the health system makes it imperative that the consumer be represented on health education planning committees.

President Nixon, in a recent speech before the American Medical Association convention warned that unless health professionals listen to public opinion, the U. S. may well be headed toward socialized medicine. The concept of health care as an inherent public right, rather than a privilege, is the basis of all eight major national health care insurance proposals introduced in either the House or Senate. Health care institutions have been encouraged by their national organizations to include an increasingly broad representation of consumer interests on their governing boards. With Americans demanding ever improved health care, and with consumer interest in health stimulated by media

criticism of the health system, it is only logical that the consumer be involved in health planning at all levels, including manpower training and education.

Recommendation 3

The Wisconsin Board of Vocational, Technical and Adult Education should continue discussions with the State of Wisconsin Board of Nursing in order to review the current licensing and accreditation policies in an attempt to better meet the health care needs of Wisconsin's citizens by providing adequate training Programs equally available to all.

Statement: Because of public demand for improved health care closely allied with an identified need for health manpower, it is believed that the Wisconsin Board of Vocational, Technical and Adult Education should give financial and leadership priority toward encouraging the accelerated development of quality programs.

By 1975, the health care industry is expected to become the nation's largest single employer with one of every 16 persons working in some form of health care. Projections from the U. S. Census Bureau forecast that health workers will increase from 6.0 to 7.5 percent of the nation's total nonagricultural labor force in the decade from 1970 through 1980. These same statistics indicate that national health expenditures will also grow from \$67.2 billion in 1970 to \$172.5 billion in 1980, a total of 8.19 percent of the Gross National Product.

In view of this unprecedented growth, it would seem appropriate that responsible bodies should compare the requirements of the State of Wisconsin Board of Nursing with the requirements

of similar agencies in other states in circumstances where such criteria appear to be restrictive to program development and, consequently, work toward implementing changes within State Board requirements.

In a recent policy statement¹ (November, 1970) calling for a nationwide moratorium on licensure, the American Hospital Association made these observations:

To the extent possible, licensure laws should contribute to sound solutions and not constitute obstacles to the delivery of health services.

The need for a change in licensure is well-documented in the literature and in practice. The issues are complex. Many vested interests are affected. The job at hand is to elicit mutual cooperation from professional groups, educators, employers, and legislators and proceed with a unified effort toward implementing short-range improvements. Such cooperative efforts will provide time for the development and implementation of long-range solutions.

Recommendation 4

The control and coordination function of the staff of the Wisconsin Board of Vocational, Technical and Adult Education should be designed to encourage district personnel to fully explore and innovate in the development of new programs in the health occupations area.

Statement: The survey of the 18 WTAE districts seemed to indicate that in many districts, directors have been discouraged in any attempt to explore or plan for health occupations programs. At best, there is little evidence that state staff leadership has aggressively promoted program expansion in the smaller districts.

¹Statement on Licensure of Health Care Personnel, (Chicago: The American Hospital Association, November 18, 1970), p. 1.

Recommendation 5

Because multiple studies have shown that licensed practical nurses tend to be employed in the geographic areas in which they have had preparation, it seems imperative that efforts be made to develop practical nursing training programs in the more rural areas where the needs are urgent and to look for alternative ways to provide for health manpower, such as scholarships or other support which might be tied to providing service in the less populated areas.

Statement: The problem of meeting health manpower needs may require a number of alternative plans, depending upon the area to be served. Providing the training in the area is one solution with some promise; however, it may call for modified programs and changes in requirements for clinical experiences. Another incentive which might be explored is to provide financial subsidies for training persons who consent to work in less heavily populated areas.

Elliot Richardson, Secretary of Health, Education and Welfare, in testimony to the House Subcommittee on Public Health and the Environment on April 20, 1971, made the following statement:

Although progress has been made (in providing government support for health manpower training programs), it has become increasingly clear that greater efforts are needed to provide health personnel of the right kinds in the right places. It is not enough to merely train additional numbers. We must also encourage trained personnel to practice their skills in the service, setting and geographic areas where they are needed most, and where they can make the greatest contribution to the health care of the nation.

Recommendation 6

It is recommended that a plan be developed for more effective utilization of institutions of higher education in the pre-service, in-service, and continuing education of health education faculty of the WVTAE system.

Statement: If one of the most frequently cited deterrent to health occupation education program expansion is, indeed, a shortage of qualified staff, then action should be taken to encourage Wisconsin's universities to provide programs to meet the professional growth needs of existing WVTAE health occupations faculty.

Recommendation 7

Experimentation in new approaches to implementing health education programs should be encouraged. Such experimentation should provide for the relaxation of selected existing requirements.

Statement: The recommendation seems justified since the report of the Commission on Statewide Planning for Nursing Education in Wisconsin indicates that 52% of hospital nursing personnel are nursing assistants. It is recommended that the preparation at a higher level, both practical and professional nurses, be augmented. If nursing home figures had been reported, it is assumed that the ratio of nursing assistants to more qualified professions would be even more dramatic. Provisions should be made to permit faculty recruiting from the best qualified of the various health occupations (as instructors and other supporting personnel) based on their competencies rather than an exclusive consideration of degree or other academic qualifications.

Recommendation 8

The recommendations of the Commission on Statewide Planning for Nursing Education in Wisconsin should be reviewed critically in light of changing conditions and continued demands for nursing personnel prepared at all levels and in all areas of the State.

Statement: The weaknesses of the Commission's report relate to the fact that the adequacy of personnel for specific geographical areas was not considered; also, that conditions have changed since the data were collected, particularly in relation to the closing of several hospital schools.

Recommendation 9

The Wisconsin Board of Vocational, Technical and Adult Education should initiate a cooperative study involving both members of the State Staff and personnel in the area of health occupations education from the various districts to investigate means of eliminating major barriers to program development.

Statement: In the survey of districts, the barriers most often identified relate to lack of qualified staff, lack of school facilities, lack of clinical facilities and finances. Existing barriers should be scrutinized to determine whether, with some modification, these obstacles could be overcome, thus permitting the development of more training programs.

Recommendation 10

Consideration should be given to establishing new cooperative programs in the training of allied health personnel, thereby making fuller use of

Wisconsin's unique clinical facilities such as the Marshfield Clinic, Southern Colony, Central Colony, Mendota State Hospital, etc.

Statement: Since the lack of adequate facilities was often cited as a limitation to program growth, the WTAE staff should undertake to explore new means of cooperation between health facilities and the district schools as a means of reducing this facility problem. Wisconsin has many fine health institutions throughout the State, and the maximum utilization of these facilities is essential to future WTAE health occupation programs growth.

This "consortia" approach, originally defined in the concept of Area Health Education Centers by the Carnegie Commission Report of 1970, Higher Education for the Nation's Health, has now been introduced as federal legislation to provide funding for such centers. Elliot Richardson, in his testimony before the House Subcommittee on Public Health and the Environment (April 20, 1971), noted that the Nixon administration would provide "targeted support" for cooperative arrangements among educational institutions and service institutions.

"Health manpower education must be related more directly to the provision of health care, and we must make the most effective use of existing as well as new health manpower training resources," Richardson noted. Other provisions included in the administration's proposed Health Manpower Assistance Act of 1971 (all integral parts of the consortium concept) are interdisciplinary training for team techniques in the provision of health care; training health personnel in geographic areas in need of health

manpower; programs to develop selected categories of personnel related to health care (physicians assistants, pediatric nurse practitioners, etc.) and advance training programs for teachers or administrators, for which there is special need.

Recommendation 11

The Wisconsin Board of WVTAE should conduct an exploratory study with the Board of Dental Examiners to determine how to best expand the allied health training programs in the dental fields.

Recommendation 12

That more scholarships be established to provide for financing baccalaureate and advance degree education for present and potential health occupation educators working in the WVTAE system.

Statement: In order to advance the academic level of health occupation faculty within the VTAE system, the State Board should facilitate professional growth from within, as well as encourage advanced education for those who may be recruited.

Recommendation 13

The Wisconsin Vocational, Technical and Adult Education system should participate and cooperate with other state government agencies such as the Bureau of Planning, the Wisconsin State Employment Service, the Bureau of Comprehensive Health Manpower Planning, Regional Medical Program, and the Governor's Task Force on Health Programs in exploring ways of establishing a computer-based health occupation information system.

Statement: The current lack of specific, up-to-date health manpower data is a severe limitation to the planning of effective programs in the health field. If WVTAE hopes to meet the future needs of Wisconsin citizens in the health education field, it will need a better information system upon which to base its plans.

The most recent report on Wisconsin's health manpower needs is the "Hospital Manpower Survey" conducted in 1969 by the Section of Statistical Services, Bureau of Health Statistics. Distributed early this spring, the report contains data almost two years old, and does not consider the manpower needs of nursing homes, public health agencies or private clinics.

Other states have recognized the need for an on-going program of health manpower data collection. In Illinois, for example, the Health Careers Council in August, 1970, received a grant of \$58,000 from the Illinois CHP agency to do preliminary studies leading to the creation of a "statewide intelligence system on health manpower resources." The project will seek to identify all activities in the State that are sources of manpower information, suggest more critical areas of need, and, hopefully, establish the basis for an on-going central resource of information and advice on health manpower to local health planning activities.

Both the lack of current health manpower information and any existing research data relative to future health manpower needs seriously impedes health manpower education program development. Such research, particularly as manpower needs

relate to comprehensive health planning activities in the State,
is vitally necessary for future program considerations.

Recommendation 14

The Wisconsin Vocational, Technical and Adult Education system, in
concert with professional and regulatory groups, should formulate admission
policies and provisions for credit or advanced standing which would
facilitate the continued health occupation education of ex-medics
returning from the military.

Recommendation 15

That the secondary school programs in the health occupations areas be
expanded and directed toward exploring student vocational interests
and abilities as they relate to health fields.

Statement: Since the majority of health fields require much
greater in-depth training than it is currently possible to offer
in Wisconsin high schools; and since most clinical experiences
for high school students are limited because of age requirements,
it would appear that high school programs in health occupations
should be of a survey nature, a broad introduction to the
various opportunities available in health careers. Such
programs can best meet the students' needs by recruiting
young people into post-high school training in health fields
following their graduation.

APPENDICES

APPENDIX A

SELECTED HEALTH OCCUPATIONS PROGRAMS

Program Title: DENTAL ASSISTANT

Course Length: 9 Months (Diploma)

D.O.T. Code: 079.378

Job Description: Dental Assistants work for an individual dentist or two or more dentists sharing the same premises. They greet patients when they arrive, make them comfortable, prepare them for examination or treatment and give chair-side assistance to the dentist.

Typical Course of Study:

First Semester

Dental Anatomy and Related
Laboratory Procedures
Dental Theory I
Dental Therapeutics I
Chairside Techniques I
Body Structure
Professional Orientation for
Dental Auxiliaries
Typewriting I
Communication Skills I

Second Semester

Dental Laboratory Procedures
Dental Theory II
Dental Therapeutics II
Chairside Techniques II
Dental Practice Administration
Related Accounting
Psychology of Human Relations
Communication Skills II

Education and Other Requirements: Be a high school graduate or have equivalency certificate (preferably); have personal characteristics suitable for public contact work in regard to dress and personal hygiene; be able to type; have a pleasant telephone voice; be a graduate of an approved course for Dental Assistants (preferably).

Program Title: DENTAL HYGIENIST

Course Length: 18 Months (Associate Degree)

D.O.T. Code: 078.368

Job Description: Dental Hygienists clean patients' teeth, administer prescribed medicaments, take and develop X-rays, sterilize instruments, and act as chair-side assistant to the dentist.

Typical Course of Study:

First Year

English Composition I
Chemistry
Anatomy and Physiology
Dental Anatomy
Orientation to Dental Care

English Composition II
Clinical Dental Hygiene I
Dental Materials and Technology
Pathology
Microbiology
Nutrition

Second Year

Sociology I
Histology and Embryology
Emergency and Surgical Procedures
Pharmacology
Clinical Dental Hygiene II
Economics

Introduction to Psychology
Hygiene
Clinical Dental Hygiene III
Social Aspects of Dental Hygiene
Speech
Dental Practice Administration

Program Title: DENTAL LABORATORY ASSISTANT

Course Length: 18 Months (Associate Degree) D.O.T. Code: 712.381

Job Description: Dental Laboratory Assistants construct and repair dentures and dental appliances such as teeth, crowns, or bridges according to prescriptions and impressions furnished by a dentist.

Typical Course of Study:

First Year

Tooth Structure and Carving
Complete Denture Techniques 1
Dental Orientation and Terminology
Communication Skills 1
Technical Mathematics 1
Fundamental Science
Complete Denture Techniques 2
Partial Denture Techniques
Science of Dental Materials
Communication Skills 2

Second Year

Crown and Bridge Techniques 2
Crown and Bridge Techniques 3
Dental Metallurgy
Dental Ethics
Psychology of Human Relations
American Institutions
Crown and Bridge Techniques 4
Dental Ceramics and Precision Attachments
Legal Aspects and Professional Relationships
Problem Clinic
Physical Education
Business and Industrial Relations

Program Title: INHALATION THERAPIST

Course Length: 18 Months (Associate Degree) D.O.T. Code: 079.368

Job Description: Inhalation Therapists set up and operate various types of medical gas administration equipment, such as iron lungs, oxygen tents, resuscitators, and incubators to administer oxygen and other gases to patients.

Typical Course of Study:

First Year

Orientation to Inhalation Therapy
Fundamentals of Inhalation Therapy
Communication Skills 1
Technical Mathematics 1
Anatomy and Physiology
Psychology of Human Relations
Chemistry
Communication Skills 2
Technical Mathematics 2
Microbiology
Physical Education

Second Year

Pulmonary Physiology
Inhalation Therapy Applications
and Procedures 2
Clinical Inhalation Therapy
Experiences 2
Technical Science 1
American Institutions
Inhalation Therapy Applications
and Procedures 3
Clinical Inhalation Therapy
Experiences 3
Bacteriology and Pharmacology
Basic Economics

Program Title: MEDICAL ASSISTANT

Course Length: 9 Months (Diploma) D.O.T. Code: 079.368-022

Job Description: Medical Assistants, under the direction of physicians, assist in the examination and treatment of patients.

Typical Course of Study:

First Semester

Medical Office Practice
and Procedures I
Medical Laboratory Procedures I
Medical Terminology I
Human Body in Health and Disease I
Personal, Vocational
Relationships I
Related Accounting
Communication Skills I

Second Semester

Medical Office Practice
and Procedures II
Medical Laboratory Procedures II
Medical Terminology II
Human Body in Health and Disease II
Personal, Vocational
Relationships II
Typewriting II
Communication Skills II

Program Title: MEDICAL LABORATORY ASSISTANT

Course Length: 12 Months (Diploma)

D.O.T. Code: 073.381

Job Description: Medical Laboratory Assistants perform routine tests in a medical laboratory, under the direct supervision of a registered medical technologist and pathologist or other qualified physician for use in treatment and diagnosis of disease. This program should not be confused with that of the registered medical technologist.

Typical Course of Study:

First Semester

Laboratory Procedures IA
Laboratory Procedures IIA
Medical Laboratory Records I
Orientation to Para-Medical I
Terminology I
Elementary Chemistry

Second Semester

Laboratory Procedures IB
Laboratory Procedures IIB
Medical Laboratory Records II
Orientation to Para-Medical II
Terminology II
Body Structure

Summer Session

Laboratory Procedures IC
Laboratory Procedures IIC
Trends and Issues in Laboratory Assisting

Program Title: NURSING TECHNICAL

Course Length: 18 Months (Associate Degree) D.O.T. Code: 075.378

Job Description: An associate degree nurse assists in planning of nursing care, gives general nursing care and assists in the evaluation of the nursing care given.

Typical Course of Study:

First Year

Orientation to Nursing
Nursing Fundamentals
English 1
Anatomy and Physiology
Microbiology
Chemistry
Nursing in Physical and Mental
Illness 1
English 2
General Psychology

Second Year

Nursing in Physical and
Mental Illness 2
Nursing in Physical and
Mental Illness 3
Physical Education
Elements of Speech 1
Maternal and Child Health 1
Maternal and Child Health 2
Professional Trends
Basic Economics

Summer Session

Introduction to Sociology
Child Psychology

Program Title: OCCUPATIONAL THERAPY ASSISTANT

Course Length: 9 Months (Diploma)

D.O.T. Code: 079.368

Job Description: Occupational therapy assistants assist in the rehabilitation of patients through the use of supportive or maintenance activities and to assist in providing activities such as arts and crafts.

Typical Course of Study:

Human Relations
Orientation to Growth
and Development

Health Concepts
Supervised Field Experience
in Geriatrics and Psychiatry

Program Title: OPERATING ROOM ASSISTANT

Course Length: 9 Months

D.O.T. Code: 079.378

Job Description: Operating Room Assistants assist the nursing and medical staff before and during an operation.

Program Title: WARD CLERK

Course Length: 1 Semester (18 Weeks Diploma)

D.O.T. Code: 219.388

Job Description: Ward Clerks prepare and compile records in hospital nursing units such as obstetrics, pediatrics, or surgery.

Typical Course of Study:

Communication Skills
Medical Terminology
Body Structure
Ward Clerk Procedures
Applied Psychology

Program Title: OPTOMETRIC ASSISTANT

Course Length: 9 Months (Diploma)

Job Description: Optometric assistants assist in making tests to determine defects in vision, prepare and fit eyeglasses or contact lenses, administer corrective eye exercise and other treatment that does not require drugs or surgery.

Typical Course of Study:

First Semester

Communication Skills I
Optometric Accounting
Filing
Anatomy and Physiology
Optometric Terminology
Optometric Assistant
Typewriting
General Optics
Dispensing I

Second Semester

Communication Skills II
Personality Development
Dispensing II
Visual Training
Office Practice and Procedures
Optometric Clinical Procedures
Optometric Clinical Experience
Ocular Anatomy and Physiology
Personal and Vocational
Relationships

Program Title: PRACTICAL NURSING

Course Length: 12 Months (Diploma)

D.O.T. Code: 079.378

Job Description: Practical nurses participate in the nursing care of patients under the supervision of a physician or registered nurse.

Typical Course of Study:

First Semester

Communication Principles I
Social Behavior
Foundation to Nursing I
Foundation to Nursing II
Nursing Fundamentals
Chronic-Aged Hospital 9 weeks
Orientation

Second Semester

Care of Mothers & Infants
Mental Nursing
Personal & Vocational Relationships
Medical Surgical Nursing of
All Ages I
Medical Surgical Nursing of
All Ages II
Medical Surgical Nursing of
All Ages III
Child Care
Advanced Medical Surgical
Nursing

APPENDIX B

LETTER SENT TO WVTAE DIRECTORS

March 19, 1971

Dear

As a part of the assessment study for the Wisconsin Advisory Council on Vocational and Technical Education, we are looking into the allied health occupations. It is the belief of at least some members of the Advisory Council that programs in this field should be greatly expanded. While there have been several manpower studies, they appear to have some shortcomings, particularly in that some have considered the needs of the State as a whole but have not reflected geographical needs. Others may reflect a degree of protectiveness of a professional group. However, two things seem to be clear: (1) the health manpower needs in a number of the allied health occupations are not being met and (2) it takes great energy and commitment on the part of a District to expand programs in this area.

It is beyond the scope of our assessment to conduct an independent manpower needs study; however, we hope to synthesize studies available. We also hope to determine what restraints or problems are encountered in expanding programs.

The enclosed questionnaire is meant to be open-ended, so please provide us with any thoughts you have on the subject. Individual responses will be used only by our survey staff, so please feel free to be completely candid in your remarks.

Your helpfulness will be greatly appreciated.

Sincerely yours,

Mr. le E. Strong
Chairman
Department of Educational Administration

MES:smm

APPENDIX C

89

VTAD DISTRICT HEALTH OCCUPATIONS QUESTIONNAIRE

Please answer the following questions concerning the field of allied health occupations in as great a detail as possible. Include copies of any recent studies concerning health occupations manpower needs in your area. Feel free to add other information not called for in this questionnaire which you believe would be helpful to the Advisory Council's assessment.

1. What information do you have as to recent studies and actual numbers determined for health manpower needs in your area?

2. What programs for training allied health occupation personnel are currently being offered by the vocational schools in your district?

<u>Program</u>	<u>Enrollment</u>
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____

3. What is the ratio between the number of students applying for admission into health occupation training programs in your schools and the number of students accepted for training in those programs? (Please indicate the ratio for each program.)

4. What criteria is used for selection?
5. What new programs in the field of health occupations do you feel should be developed by the vocational school (or schools) of your district?
6. What present programs should be expanded?
7. What other agencies (hospitals, private schools, university extensions, or colleges) now offer training for health occupations in your area? (Please indicate the types of programs and approximate numbers of students concerned.)
8. What are the major deterrents to developing and/or expanding health occupation training programs in the vocational schools of your district? Be specific.
9. If you have allied health programs, what were the most difficult problems in developing the programs. Be specific.

10. Are you considering starting new programs? Yes _____ No _____

(a) For what occupation _____

(b) Have you made application to the State Board of Vocational,
Technical and Adult Education?

11. What assistance and/or encouragement have you received from:

- (1) The State Board of Vocational Education Staff,
- (2) The State Board of Nursing or appropriate regulator agency,
- (3) Professional groups.

12. What types of restraints have you faced, if any?

13. What is your placement record of your Health Occupations graduates?

14. In what allied health areas do you believe additional graduates
could be placed?

I. SUMMARY

Traditionally, there has been an overlapping of subject matter and skill development in business education courses and as a result, students have failed to get a realistic approach in their occupational preparation. Through a planned block of time, it is now possible to integrate instruction and work experience and to teach the required office skills and knowledges simultaneously.

The purpose of APEX, the American Paper Exporters Association, is to create a situation which would help the instructor to correlate the teaching of skills and knowledges with work experience in a realistic setting. Through this project the classroom, which has been transformed into an office, is supplied with the input materials that make it possible for students to function as employees in an office type situation. The office is supervised by the instructor who acts as office manager. All activities and operations of the business are explained in the Office Manager's Guide, which is the heart of the program as it contains suggestions and detailed procedures for implementing the project. Although APEX is basically designed for a class of twenty students, on a planned block of time for three consecutive hours, five days a week, it is possible to have a smooth operation with as few as eight students by omitting the positions of design and copy clerks.

The three divisions of APEX are the Statistical Division, the Information Services Division, and the Office Services Division. These divisions can be staffed with almost any number of employees, or the instructor may wish to omit one or two divisions. The instructor has maximum freedom in implementing the program to meet his needs.

The program is organized into thirty-six "modules" or weeks of instruction which correspond with the number of weeks in the regular school year. However, depending on the amount of time available, and the number of students and their ability, the instructor may increase or decrease the work load or allow a time longer or shorter than one week to complete the activities of a module. Therefore, a module may refer to one week, ten days, two weeks or any period of time that the instructor may feel is practical. However, a numerical sequence should be followed throughout the year regardless of the number of modules completed.

There are three phases of progression: (1) the orientation period; (2) the transition period; and (3) the simulation period. The first phase or the orientation period is the time at the beginning of the year when students will receive instruction on the machines they will be using in the project and begin preparation of mill reports which are part of the input materials used during simulation. The second phase of the transition period is the next block of time during which the classroom is transformed into an office, students apply for a job, and continue preparation of mill reports. There are nine transition units supported by overhead transparencies which enable the instructor (office manager) to prepare the students for their new roles as employees. The third phase or the simulation period begins as soon as students have completed their interviews. At this time, employees are placed in one of the following ten-entry level positions: mail clerk, file clerk, billing clerk, regional clerk, copy clerk, design clerk, machine operator, receptionist, payroll clerk, and typist. The students remain in these positions for approximately four weeks after which they are promoted to another job. However, depending on the ability of the student, it is possible for him to remain in the same position. As students are rotated to new positions, they get the opportunity to train the employees who replace them as a prerequisite for promotion.

Because of the realistic materials used in this project, it is an exciting and challenging means of presenting the skills, knowledges and attitudes necessary for preparing students for various occupations.

II. INTRODUCTION

Traditionally, business education courses offer a variety of skills as well as knowledge of communications, human relations, and organizational techniques. However, many of these courses have failed to provide realistic training for occupational preparation. There is a lack of integrated instructional materials available for the three-hour block to help bridge the gap between classroom instruction and actual situations. The structure of most materials presently used do not illustrate to the student the relationship of his job to other jobs. In addition, most materials which are now available, do not allow the student to progress at his own rate.

Therefore, as a result of a presentation by a representative of the 3-M Company at a Business and Office Teacher Conference at Cedar Lakes, and a desire to field test, the APEX project was used during the 1971-72 school term in a Senior Clerical Block at the Mercer County Vocational Technical Center. This project is based on true-to-life and businesslike input materials as well as sound educational principles.

Statement of the Problem

It was the purpose of this project (1) to provide an opportunity to integrate instruction and work experience, and to teach the required skills and knowledges simultaneously; (2) to provide a setting which allows for individualized instruction by allowing the student to move from one position to another on the basis of his own ability; (3) to provide experiences in which the student learns the relationship of his job to others; (4) to provide experiences in which the student learns the basic responsibilities employees assume when accepting employment; and (5) to provide the student the opportunity to take an active part in training other employees as a prerequisite for promotion.

III. METHOD

APEX---The American Paper Exporters Association is an association modeled after a real service organization promoting the interests of the United States Paper Industry, with the instructor acting as office manager. He supervises three divisions each staffed by students referred to as employees throughout the course. The program is basically designed for as many as twenty students and as few as ten for a three-hour block of time, five days a week. However, due to a limited number of students, the project began with eight students, and completed with six.

There are ten-entry level positions, but it was necessary to eliminate the positions of design and copy clerks during the first semester and then to combine some positions during the second semester as two students had to make schedule changes. The program is flexible enough to permit whatever combination of jobs the instructor feels is workable.

APEX is set up in thirty-six "modules" or weeks of instruction, corresponding to the regular school year, each involving a number of tasks and activities to be performed. However, since the number of office personnel was much smaller, and the project did not begin until the second six weeks of school, all modules were not completed after completion of the fourth module, most of the "weeks" follow the same basic pattern. Depending upon the amount of time available, the number of students and their ability, the instructor may increase or decrease the work load or allow a time longer or shorter than one week to complete the activities of a module. A module refers to one week, ten days, two weeks or any period of time the instructor feels is needed. The instructor has maximum freedom in carrying out the activities of the project. However, for the best results a numerical sequence should be maintained throughout the year at least until after completion of the sixteenth module.

There are three phases of progression in carrying out the activities of the project: (1) the orientation period (2) the transition period and (3) the simulation period.

The first phase or the orientation period is the block of time at the beginning of the project when students receive instruction on the office machines they will be using throughout the simulation. Since instruction on machines had begun before the initiation of the project, I spent approximately two weeks here. However, the instructor may spend from two to six weeks depending on what he feels is necessary for his particular class. During this time, students also can begin preparing "mill reports" which will be part of the input materials during the simulation period. The instructor will need to study the Office Manager's Guide and review all the materials in order to organize and prepare for operation.

The purpose of the second phase or the transition period, which is approximately two weeks in length, is to familiarize students with the policies and procedures of APEX, to prepare them for making application for the job of their choice, the interview, and placement. There are nine transition units supported by overhead transparencies which the instructor uses to facilitate the transition from classroom to office. Through the visuals, the instructor is able to introduce the students to the history, the goals, the policies and the procedures of APEX. After each day's presentation of these materials, some of the students, now referred to as applicants, continued to prepare mill reports while others were being interviewed. During this time, students also composed and wrote letters for subscriptions to trade magazines and free materials pertaining to the paper industry to be used in the resource library.

After all applicants were interviewed and placed and mill reports were completed for the first thirty weeks, the employees were prepared for their first day on the job. Through the use of the transparencies they were given an outline of the first day's activities. At this time, all employees completed such personnel forms as withholding exemption certificates, insurance forms, parking permits, time cards, etc. In addition, each employee was presented his own Employees Handbook which spells out what is expected of an employee in terms of performance, office procedures, personal conduct, efficiency and resourcefulness. The handbook also contains a description of each job with step-by-step procedures which each employee is to apply in carrying out the responsibilities and duties connected with the position to which he has been assigned.

The third phase or the simulation period begins after placement of the employees in one of the ten-entry level positions. As stated previously, it was necessary at the

beginning of this project to eliminate the positions of design and copy clerks, and finally to combine some positions in completing the project.

In order to implement these three phases of the program, the instructor must be thoroughly familiar with the Office Manager's Guide which outlines suggestions and procedures to be followed in carrying out the operations of APEX. At the end of the first month's operations, all employees are rotated to another position where they remain until the end of the second month and so on. Each employee has the responsibility of training the new employee who takes his position, thereby learning that training other employees is a prerequisite for promotion.

For each week or module, the following input materials are needed regardless of the time assigned: one mail input envelope; fifty mill reports previously prepared; one meeting unit; one critical incident; and part of one special project.

The mail input envelopes each contain about thirty-five pieces of incoming mail so that the office manager can place an average of seven letters in the incoming mail each day. The letters are divided into groups with suggested replies given in the Office Manager's Guide. Letters coded "D" require the office manager to dictate a suggested reply to be transcribed on the transcribing unit. Letters coded "C" indicates that the replies may be composed by the employee. However, a few basic directions were usually outlined by the instructor on all letters. Letters coded "R" indicate that some research must be done by the employee handling this letter, and requires him to use information from the Master's Book which contains samples of all office forms, information for mill reports and materials for research.

Another of the input materials are the mill reports which serve as the basis for most of the publications of APEX. Fifty mill reports are distributed to the regional clerk or clerks who compile the information on the appropriate worksheets. These worksheets are reproduced and the results mailed to all member mills with a cover letter. This activity gives the employees experience in addressing form letters, addressing envelopes and handling bulk mailing.

The next group of input materials are the thirty meeting units which deal with a variety of topics. Each of these units is in a separate folder with transparencies and background information which deal with the development of skills, knowledge, and attitudes. Sometime during the week, either at the beginning or the end preferably, a staff meeting will be held. The Office Manager's Guide suggests that the meeting will be held on Tuesday's, and this is the day that meetings

were usually scheduled. The first few meetings may be conducted by the office manager with each employee thereafter being responsible for at least one meeting. However, with the small group of students in the project it found that after a few presentations by students, it worked better if the instructor conducted the meetings with assistance if needed from the staff.

Another of the materials for input are the fifty-two critical incidents which can be scheduled at any time the instructor feels there is a suitable situation. For example, the incidents regarding checks for the wrong amount, etc. were coded on each letter to which it pertained.

In addition to the other materials described, the office manager may, at any time, begin a special project. Suggestions for completing each phase of the project accompany it. The office manager may give the responsibility of the project to one employee or several if he feels it is necessary. These projects can be worked into the schedule when one employee's work load may be lighter than others or when some employees are able to produce at a faster rate of speed than others. There are also a series of mini projects which may be assigned to individual employees.

A necessary part of any program is the evaluation. Any instructor who attempts this project will have questions regarding evaluation. However, each instructor will basically have to determine how he will evaluate the performance of his employees. All work that went out of our office had to be mailable. As the instructor signed each letter she simply recorded a grade on a chart beside each employee's name. Because of the great amount of correspondence going out of the office, it was extremely easy to get a great number of grades. In addition, a special evaluation sheet is provided to rate the performance of each employee. At the end of the course, each employee was asked to honestly evaluate the program. These evaluations are included in the Appendix.

IV. RESULTS

It is felt that APEX is an exciting and challenging way of teaching the Clerical Block, and as a result, the following were accomplished:

- A. Students were more serious about their work because they were working in an office type situation
- B. Most students became much better typists and proof-readers

- C. Students became more efficient in planning the use of their time and learned to organize the materials for each job more effectively
- D. Students learned that in an office everyone must do their part, and they expressed more concern for other people's feelings
- E. Students learned to accept responsibility for a particular job and had sense of satisfaction and accomplishment in carrying out that task
- F. Some of the students changed their attitude in a positive manner toward certain areas of work as a result of working for APEX; whereas before they had expressed a negative attitude

V. CONCLUSIONS

In my opinion, the structure of the APEX Project permits the following:

- A. The classroom can be transformed into an office type situation
- B. Students are given the opportunity to see the relationship of their jobs to other employees jobs
- C. The instructor may allow students to move from one position to another on the basis of his ability because the structure is very flexible
- D. Students are given the opportunity to learn the responsibility that employees assume when they accept employment
- E. Students are given the opportunity to take an active part in training other employees as a prerequisite for promotion
- F. Students learn to work under pressure and meet deadlines
- G. The instructor has a great deal of freedom in implementing the program because of the variety of input materials
- H. The program brings realism into the instruction because the materials used are based on real data from actual paper mills throughout the United States.

VI. RECOMMENDATIONS

- A. The Project should not be used with fewer than eight students
- B. The instructor should have about a month before beginning the project to do the following:
 - 1. Study the Office Manager's Guide to familiarize himself with the program
 - 2. Dictate belts for letters coded "D"
 - 3. Set up rotation schedules and prepare the calendar of duties and responsibilities for first few weeks of operation
 - 4. Collect materials for setting up files
 - 5. Prepare rough drafts of letters to be typed by employees in writing for free materials
 - 6. Review meeting units to decide what other materials need to be brought in and determine in what order the meetings should be presented, particularly if it will be impossible to complete all thirty meetings

VII. SUPPLEMENTARY AND APPENDIX MATERIALS

- A. Glossary
 - 1. APEX--American Paper Exporters Association, a fictitious business organization which serves as the means for the simulation.
 - 2. Master's Book--contains a number of removable forms which can be duplicated as the need arises. It also includes information for mill reports and materials for research.
 - 3. Mill Reports--form the basis for most of the publications of APEX.
 - 4. Office Manager's Guide--Serves as the heart of the program as it explains what APEX is, what it does, how it is to be organized, and how the instructor can implement the project.
 - 5. The orientation period--a period of time from two to six weeks during which students have an opportunity to learn the basic skills related to the office machines they will use during the simulation.

6. The transition period--the period of time approximately two weeks in length during which students are prepared for their roles as employees and the classroom is changed into an office.
7. The simulation period--the period of time during which the class operates as an office with the instructor as office manager and the students as employees.
8. Module--is used interchangeably with "week", but the instructor may assign any time value to a module that he feels is necessary to carry out the activities of the office.

B. Student Evaluations

1. Student Number One--I feel that our working for Apex has been a great experience and it is something that we will always remember, and I value it deeply.

It took a lot of hard work and determination but I really feel it was worth it. Not only did we get to try something new, to see if we like it, but while we worked for Apex, we learned many things--a lot more than we would have if we hadn't had the opportunity to work for Apex, like only reading about the different positions and how the company operates.

Our class, as a whole, worked together and helped each other out when one of us had more than we could do. When one of us was ill and couldn't make it, all the others would pitch in and do her job for her without too much fuss. I think we really got a chance to understand one another and to share our feelings.

I feel that since I have been working for Apex, I have become more aware of things and other people's feelings more than I used to be. Also, I feel that I had a responsibility and it was nice to know that the others depended on you.

If you plan on getting a job after you graduate, Apex is a good way to get all the training that you will need for a bright and successful future.

2. Student Number Two--I liked working at Apex because it was interesting, different, challenging, and even trying at times.

Things that made the jobs interesting were changing jobs about every four weeks, then there wasn't a

slump in the jobs. Also, changing jobs gave you an idea of what each one in the office does and is responsible for. Each day seemed different and this way things weren't so boring and routine.

The challenging parts were some of the jobs. If you didn't really like a job, it was a challenge to begin with to try and do the best job possible, or at least it was for me.

The trying times were when we had to work extra hard to finish all the mail for that particular week. Sometimes the jobs were a little trying, but we always survived. Then, when some or one of the employees were absent, we always took on their job and were willing to do this even though it meant working extra.

I think it has helped our relationship between the other employees. Sometimes when someone had a lot of things to do and one of us were finished, we always helped each other. Also some of the employees held two jobs and didn't mind doing this. Maybe we weren't always willing to do our jobs but we did it anyway.

Some of the jobs I really like were filing and typing but the rest were important too. So, I think the Apex business was very good for us. I suppose if we had stayed with the books we would have just talked about what goes on in an office, but this way we actually did the things that help to keep an office going.

I suppose my challenge was doing a job I didn't really like and I guess I learned to do this, so if I learned to do this much it must have been good.

3. Student Number Three--I think that Apex was a very good project because it showed you all about how to work in a business. I liked all of the jobs that I held at Apex, but I really didn't care too much for Typist. But, really being the Typist has helped me to type much better. I guess the job I liked most was the Regional Clerk. I think that the jobs we have learned to do would help anyone who intends to get a job after their graduation and for the ones who may have to work and don't think they are going too.

The thing that I did not like about Apex this year was the fact that we didn't have enough employees and

everyone else had to either do two jobs, or had to do other things not pertaining their own job.

4. Student Number Four--I like Apex because it is interesting to learn all of the different types of jobs. The jobs I liked best were file clerk and machine operator. Working for Apex helps you to learn how to get along with other people in the office.

There really isn't anything that I didn't like except the job of typist, but it grows on you. In other words, I liked working for Apex and think it was a great experience.

5. Student Number Five--I think this program is good because it teaches you what to expect on a real job and gives you the experience to get a job. In the jobs I have held, I have learned to file properly, to use machines effectively, to sort mail and to bill people who owe the company.

Apex has helped me in my relationship with the employees of the company and has improved my outlook on life. It helped me realize that this world is going to be tough when I get out on my own.

There is only one job I didn't care too much about and that was typist. I would rather have been machine operator or regional clerk because I like to work with machines and use my hands. The only thing wrong with this program was that we didn't have enough people to hold the jobs and we had to double up.

6. Student Number Six--I think this program is a good experience for you if you are going to get a job in an office. I especially liked the jobs of payroll clerk and regional clerk but at first I didn't like the job of typist. But after awhile, I got use to it and didn't really mind it. In fact, I became more accurate and learned to compose letters on my own.

PROGRAMS; *PRACTICAL NURSES; *PROGRAM
EVALUATION; *PARAMEDICAL OCCUPATIONS;
*EDUCATIONALLY DISADVANTAGED; COOPERATIVE
PROGRAMS

ABSTRACT - THIS PROJECT WAS DESIGNED TO
EXPLORE THE FEASIBILITY AND PRACTICALITY OF
IMPLEMENTING THE CONCEPTS OF: (1) A CORE
CURRICULUM, (2) A CAREER LADDER FROM THE
NURSE ASSISTANT (AIDE) LEVEL TO THE PRACTICAL
NURSE LEVEL, AND (3) SELF-LEARNING PACKAGES
AND A MULTI-MEDIA APPROACH TO EDUCATION FOR
THE EDUCATIONALLY DISADVANTAGED. AFTER AN
INITIAL PERIOD OF IMPLEMENTATION AN
EVALUATION OF THE PROJECT WAS UNDERTAKEN. THE
DATA COLLECTED REGARDING THIS EFFORT INDICATE
THAT THE SPONSORING AND PARTICIPATING
AGENCIES HAVE FOUND THESE CONCEPTS TO BE
CONDUCTIVE TO HIGHER RATES OF SUCCESS FOR
THEIR CLIENTS THAN WERE POSSIBLE UNDER
TRADITIONAL PROGRAMS. (JS)

PREFACE

This report covers the Project from inception until present. The Health Occupations Program was a collaborative, cooperative effort which was inspired by Mrs. Shirley Mannion, State Supervisor, Health Occupations, Arizona State Department of Education, Division of Vocational Education.

Agencies which initially funded the Program in an effort to enhance the success of their clients into successful performance of jobs in the health field are listed on the front cover, as sponsoring agencies. Agencies which later joined the effort by enrolling clients on a buy-in-basis are those listed on the front cover as participating agencies.

The Program was approved by the State Department of Education, Division of Vocational Education and the Arizona State Board of Nursing to explore the feasibility and practicality of implementing the concepts of a core curriculum, career ladder from nurse assistant (aide) level to practical nurse level, unitized self-learning packages and a multi-media approach to education with a unique population--disadvantaged adults with a minimum of eighth grade (8th) reading, writing and mathematics functional ability. The goal of the Project was to determine if implementation of these concepts with agency supportive services would enhance success with this student population.

The data to date indicate that the sponsoring and participating agencies have found the concepts employed in the Project to be conducive to higher rates of success for their clients than were possible under traditional programs.

Analysis of this Program is complicated by the fact that there exist such a large number of variables. However, the data indicates a high degree of success with a student population which would not have had the opportunity to obtain preparation, nor would their chances of success have been as possible in a traditional program.

The comments presented in this report are representative of the analysis and evaluation of the data by the author, and not of any of the agencies, per se.

ACKNOWLEDGEMENTS

Large numbers of persons have given of their time and energies to plan, implement and evaluate this Program. The health service agencies, sponsoring and participating agencies, students, faculty and secretarial personnel cooperated to support the goals.

Special mention is hereby given to:

State Department of Education
Division of Vocational Education.....Mr. J. R. Cullison
Manpower Development Training Program.....Mr. John Dutton
Special Needs Program (W.I.N.).....Mr. Stewart Miller
Arizona State Employment Services.....Mr. Charles A. Boyle
Employment Opportunity Center.....Mr. Kenneth Kinkade
Work Incentive Program.....Mrs. Arlene Stevenson
Division of Vocational Rehabilitation.....Mr. Charles Orvis
Tucson Public Schools Board Members
President.....Mr. Soleng Tom
Clerk.....Mrs. Walter Hafley
Member.....Mrs. Bruce Dusenberry
Member.....Mrs. David Wine
Member.....Dr. Mitchell Vavich

Tucson Public Schools Skill Center Administration
Director.....Mr. Bob Kessler
Assistant Director.....Mr. Ed Acuna
Project Director.....Mrs. Dorothy Lawrence.

Special mention should be given to the faculty who were loyal, cooperative, flexible without which this Program would have been impossible:

H.O.P. Faculty	
Mrs. Louise Adams	Mrs. Amelia Lewis
Mrs. Nancy Bowers	Mrs. Susan Margolis
Mrs. Virginia Caldwell	Mrs. Dorothy Moore
Miss Audrey Englestad	Mrs. Carol Orin
Mrs. Ellen Isaak	Mrs. Judi Watts
Mrs. Susan Kane	

My sincere thanks to each and all of the many who played vital roles in the lives of the students and to the development of this data, particularly Eleanor Markert, Research Dept., T.P.S.

Dorothy Lawrence,
Project Director

PART I
CHAPTER I
INTRODUCTION & BACKGROUND

This Health Occupations Program Report was concerned with data and information obtained directly from the Program staff, students, graduates, health agencies which offered clinical facilities to the students and employment to the graduates, sponsoring agencies, participating agencies, and evaluation services of the Arizona State Board of Nursing and National League for Nursing. The study is conceived to be a comprehensive exploration of an innovative attempt to increase the effectiveness of health occupations education in the State of Arizona.

Present practices of health occupations education result from a culmination of earlier actions and events occurred under different sets of circumstances, the validity of which needs exploration. Further developments will be guided by impressions and judgements based, at best, on available data. The primary purpose of this study is to develop current data to serve as a basis for sound judgements in planning future developments in preparation of health occupational personnel at the job entry assistant and practical nursing levels. Adaptation and utilization of the data and findings for implementing change in health occupations education programs will be the responsibility of competent leaders and administrators in the State of Arizona.

The general hypothesis of this study was that by employing educational innovations you can enhance student success rates. Hypothesis #2 was that students who do not meet traditional selection criteria may be successful health occupational personnel if given a real opportunity to succeed. Hypothesis #3 was that many persons who achieve success at the assistant level would continue to the next level if given a real opportunity. Hypothesis #4 was that increased numbers of qualified persons will be retained in the health field if there is a good opportunity for mobility within the field. Hypothesis #5 was that demonstrated performance is a better predictor of success on the State Board Licensure Exam for practical nursing than length of program. Data from the testing of these hypotheses should serve to improve the quality and quantity of available health occupational personnel at the assistant and practical nursing levels.

To test these hypotheses the student population was identified as one which would not have met the criteria for other practical nursing programs in the State of Arizona. Success was measured by

Arizona State Board of Nursing Examination for licensure as well as demonstrated successful performance on the job.

The research design for this descriptive research included exploration of relationships which would affect the student's opportunity for success. The statistical technique of correlational coefficients was utilized.

Appendix A presents an Outline of the Data Collection Plan which gives a general time schedule and list of the instruments utilized. Descriptions will be included in the chapters where results are presented.

PART I
CHAPTER II
RELATED RESEARCH

Variables

Education

In the report, Background, Characteristics and Success of Practical Nursing Applicants, Students and Graduates, Tomlinson, Langdon, Huck and Hindhede, found a significant relationship between the amount of education and completion of a practical nursing program. They found a 53.8% P.N. program completion of students with less than 12th grade.

Age

The Tomlinson group found the highest drop-out rate in two age groups, 35-39, and 50-54. The mean age of students in the P.N. programs used in their study was 27. Tomlinson, Langdon, Huck and Hindhede found a correlation of .10 between age and State Board Licensure Examination scores.

G.A.T.B.

The mean scores on the G.A.T.B.-General for the P.N. graduates was 103.2. All students admitted through the State Employment Service on the basis of their G.A.T.B. scores exceeded the norm as established by the State Employment Service; approximately one-fourth of the students failed to complete the Program. This is the same percentage of dropouts this group found for the entire enrolled student population. In summary regarding the G.A.T.B., this group felt there is some relationship between the scores on the G.A.T.B. and completion of the Program, however, they felt other factors may be more important than the scores on the G.A.T.B.

Dependents

The data reflects that 42% of the dropouts had children at home and approximately 50% had dependents.

Race

The dropout rate for the nonwhite group was significantly higher than for the white group. The dropout rate for nonwhite students was 45.5%.

N.L.N.

This research indicates correlations between S.B.L. scores and the N.L.N. (N.I.P. and T.U.C.) ranged from .47 through .74.

State Board

Licensure

S.B.L.

Exam.

This population excelled the national mean of 500 with a mean of 530 and a standard deviation of 85.2. Tomlinson, et al, found a correlation between the S.B.L. and the G.A.T.B.-General to be .10. It was interesting that 11.5% of the M.D.T.A. students scored 399 or below. At the other extreme 11.5% scored 650 or above. Graduates of the M.D.T.A. schools showed a wider range of scores than any other group.

Variables

Faculty

Relatively low relationship between the faculty evaluations and the standardized test evaluations of achievement in practical nursing.

Standardized Tests

Each of their standardized selection instruments and the high school achievement scores had statistically significant correlations with P.N. in-school achievement measures and the State Board License results. However, these correlations were generally in similar range and no one instrument was found to be a significantly better predictor of in-school achievement or State Board Examination scores than the others.

High School Achievement

In An Investigation of the Vocational Behavior of Selected Women Vocational Education Students, L. J. Bailey found that students' grade point average in high school was significantly correlated with P.N. classroom achievement and State Board achievement.

Ability, Achievement measures

L. J. Bailey also found that State Board scores were significantly correlated with all ability and achievement measures, except patient relationship rank. In general, the data indicate positive significant relationships among all of the cognitive type of measures. However, the data suggest that variables other than those utilized in this study were associated with clinical achievement and patient relationship rank.

Age

In a study entitled, Job Satisfaction in Practical Nursing as a Function of Measured and Expressed Interests, G. R. Martin found the mean age of the P.N. group to be 25.3. He further found practical nursing students to be an unique population who have tended to postpone their education (not receive vocational training immediately after high school).

Education

In a Review of studies in Illinois and Iowa it was found that all programs required at least a tenth grade education or its equivalency; 42% required high school completion or its equivalency.

G.A.T.B.

In a study entitled, "The 'G' Factor of the General Aptitude Test Battery as a Predictor of Success in the National Test Pool Examination for Practical Nurses" done by Mary Ruth Ubbink, R.N. January 1970, a coefficient of correlation for the "G" factor of the General Aptitude Test Battery and the National Test Pool Examination was .448. Miss Ubbink stated that this moderate correlation would indicate the G.A.T.B. should be continued as a predictor of success on the S.B.L. Examination until a better predictor of success is found.

Variables

Miss Ubbink recommended further study on the language factor as to its bearing on achievement in the G.A.T.B. as well as the S.B.L. Examination.

Miss Ubbink found the following correlation of the "G" score of the G.A.T.B. and other standardized ability and intelligence tests:

Differential Aptitude	.78
American Council on Education	.72
Otis	.76
Wechsler-Bellvue	.68
California Test of Mental	
Maturity	.81
Army General Classification	
Test	.70
Miller Analogy	.53

S.B.L. Exam.

In a Survey done by Mary Ruth Ubbink, R.N., Phoenix Union High School P.N. program entitled "Survey of Factors Affecting the Scale of State Board Achievement (National Test Pool)", Mrs. Ubbink reported the following data:

Age

The younger students do not do as well as the older students. It was felt by the author that this reflected the younger student's lack of maturity, life experience and motivation.

Race

Miss Ubbink referred to the many authorities on testing that our general education tests are geared for the middle and high, socio-economic class, caucasian race. In her survey she found only those of caucasian race received scores of 650 and above, and as far as could be determined these students were also of middle socio-economic group.

98% of the failure-scoring graduates were non-white, which the author felt was a reflection of the fact that national tests are usually geared to a certain group, which does not adequately consider the language and cultural factors of the non-white population.

Prior Educ.

Miss Ubbink interpreted the survey data to indicate that the high education the student achieved, the greater chance for success.

81% of the student who failed the S.B.L. Examination were high school graduates. The balance were less than high school but more than 8th grade education. It was believed that age (immaturity) of the students affected this score inasmuch as the majority of the students were in the under 25 years of age group.

Variables

Aptitude

Score

All failing students received a score below 89 on the G.A.T.B.-General factor. Miss Ubbink felt this would indicate using a score of 90 for a selection criteria.

N.L.N.

Miss Ubbink felt the N.L.N. tests seem to be an excellent predictor of success on the S.B.L. Examination inasmuch as all the students achieving high above the national average (55 percentile) also achieved excellent scores on the State Board Licensure Examination. Conversely, Miss Ubbink found all S.B.L. Examination failing students received far below the national average on the N.L.N.

Faculty

Assess-

ment

The faculty, according to Miss Ubbink, should be able to predict with reasonable accuracy if, and who the failures in a class will be.

Miss Ubbink further states a low score in one area (eg. aptitude) will not always determine a S.B.L. Examination failure, because there are too many variables to be considered. Yet, she states that if several variable scores are low, the student will, with reasonable certainty fail the S.B.L. Examination.

PART I
CHAPTER III

HEALTH OCCUPATIONS PROGRAM FACTS AND FINDINGS

HEALTH OCCUPATIONS PROGRAM POPULATION

The total population for this Program consisted primarily of adults classified as disadvantaged* and who met miscellaneous criteria of the specific referring agency.

The following table indicates the total number of students enrolled during the period from October 1970 - April 1972.

<u>Referring Agency</u>	<u>Acronyms</u>	<u>No. of Students</u>
Division of Vocational Rehabilitation	(D.V.R.)	37
Service, Employment, Redevelopment	(S.E.R.)	10
Bureau of Indian Affairs	(B.I.A.)	5
Independent Students		36
Manpower Development Training Act	(M.D.T.A.)	57
Work Incentive Program	(W.I.N.)	144
		<u>289</u>

As of April, 1972, 91 students were currently enrolled, leaving 198 potential graduates. 172 (90%) of the potential graduates had successfully completed the Program in some health occupation.

<u>Graduates Job Preparation of</u>	<u>Acronyms</u>	<u>No. of Students</u>
1a. Nurse Assistant (Aide)	(N.A.)	157**
2. Ward (Unit) Clerk	(W.C.)	9
3. Physical Therapy Aide	(P.T.A.)	6
		<u>172</u>
1b.**Practical Nurse	(P.N.)	
Out of the 157 students who completed at the N.A. level had also been successful at P.N. level.		52

Out of the 52 who had successfully completed at the nurse assistant level, forty-seven (47) students had taken the Arizona State Board Examination for licensure as a practical nurse.

The practical nurse population will be the basis for this Report. Little data is available on the assistant level. Due to time and personnel limitations of this Program, compilation of data on the assistant level group is not complete. However, this does not denounce the necessity of further research at this level.

*See Appendix B for definition of disadvantaged.
Appendix C for student selection criteria.
Appendix D for student population description.

CORRELATIONS BETWEEN SELECTED FACTORS OF ABILITY AND ACHIEVEMENT OF PRACTICAL NURSING GRADUATES

Data utilized in the analyses included in this Chapter were drawn from 1) standardized instruments for measuring ability, aptitude and achievement, 2) questionnaires completed by students during the Program and after completion of the Program, 3) rating scales completed by the faculty, 4) evaluation of on-the-job performance of graduates after completion of the Program which were completed by the employing health agencies, and end of Program achievement as measured by the State Board Licensure Examination. Selected personal and family characteristics are included.

Product-moment correlation statistics, Pearson-r, were used to determine the relationships among many of the variables. The degree of relationships between two variables or measures is determined by the correlation coefficient, an index which may vary from 1.00 to -1.00. A correlation of 1.00 would indicate that the person with the highest score on one measure also had the highest score on the other measure with which it is being correlated, and that each of the persons who took both of the tests (or had a score on each measure) achieved the same rank in each group, that is, perfect correlation. By knowing the score on one measure, you could predict accurately the score the person would achieve on the other measure. A correlation of -1.00 is a perfect negative correlation, in which the highest of a group on one measure is the lowest of the group on the other measure, and all persons who took both tests are in exactly reverse order on the two measures. When no relationship exists at all, the correlation is 0.00 or, by chance of small magnitude, either positive or negative. This means that a person scoring high on one measure is just as likely to be high, medium or low on the other measure. If high, and significant, relationship could be found between selection instruments and success in practical nursing programs, then the selection process could be improved.

Several factors may operate to reduce the size of the correlation coefficient. Included are: a restricted range of scores, individual factors or conditions affecting the person taking the test, poor reliability of the test instruments, errors in the scoring procedure, etc.

ABILITY AND APTITUDE MEASURES

General Aptitude Test Battery (G.A.T.B.)

The G.A.T.B. has been developed and standardized by the U. S. Employment Service and utilized by the State Employment Services for counseling, occupational placement and as a basis for recommendation to M.D.T.A. training programs. Included in the G.A.T.B. are twelve

sub-tests which yield individual scores; combinations of the individual sub-tests are used to determine additional measures. Standardization and validation of various combinations of the sub-tests have been developed by the U. S. Employment Service for various occupations.

Two scores from the G.A.T.B. are reported in this Study. The G - Intelligence factor indicates general learning ability--the ability to reason and make judgments. Closely related to doing well in school. The V - Verbal Aptitude factor--the ability to understand meaning of words and to use them.

Health Occupations Program
Practical Nurse Graduates
G.A.T.B. Scores

	General	Verbal
--	---------	--------

N=47		
Mean	100.49	102.30
S. D.	13.62	13.36

The mean for the practical nursing group of students was above the acceptable minimums as indicated by the above data. However, 13 students (28% of the total population) scored less than the commonly accepted score of 90. It should be noted that out of these 13 students, 9 (69% of the 13), were successful on the State Board Licensure (S.B.L.) Examination. These 13 students would not have been given the opportunity to succeed in most traditional programs. This data would tend to support Hypothesis #2 that students who do not meet traditional selection criteria may be successful health occupational personnel.

Arizona State Board of Nursing
Practical Nurse Licensure Examination
Correlations with G.A.T.B.

Factors	Pearson-r	Significance
General	.50	P<.01*
Verbal	.56	P<.01

*The probability statement, or level of significance, indicates that there is only 1 chance in 100 that this was a chance relationship.

This data would indicate that there is a significant correlation between the General and Verbal G.A.T.B. factors and the State Board Licensure Examination.

The author suggests that the G.A.T.B., General and Verbal factors, are a valuable tool to provide a standardized measurement of aptitude. However, it should be considered as only one of many variables which may require adjustments on the part of the student in order to find success in practical nursing.

Adult Basic Learning Examination (A.B.L.E.)

Since eighth grade functional reading, vocabulary and mathematics was approved for this pilot Project, the Adult Basic Learning Examination, Level II, Form B, was the instrument used to determine these levels.

The reading section of the A.B.L.E. determines how well the student can understand the meanings of sentences and paragraphs which he reads. The reading test establishes the functional reading level of adults from grade 5 - 9.

The vocabulary test contains 50 items to assess vocabulary independent of reading ability. In addition to an evaluation of how well the student understands words, it gives an indication of how well the student will be able to grasp verbal, school-type material.

In order to obtain valid measurement of the student's arithmetic ability, the A.B.L.E. includes both an arithmetic computation part and an arithmetic problem solving part. The two are administered and scored separately, but the raw scores may be combined into one for a total arithmetic score. The entire arithmetic test determines the overall arithmetic achievement of each student. It gives an indication of relative strength in the two areas sampled in the two subtests. The test can, of course, be used to determine placement in an arithmetic program.

Data on the validity and reliability of the A.B.L.E. was obtained by Drs. Karlsen, Madden and Gardner with three groups -- (1) school group of 1,000 pupils from 4 states, (2) 2,500 inmates of state penal institutions of North Carolina, (3) 800 Job Corp personnel, and (4) 450 adults enrolled in basic education courses.

Health Occupations Program Practical Nurse Graduates A.B.L.E. Scores			
	Vocabulary*	Reading*	Math*
N=47			
Mean	8.91	8.90	7.42
S.D.	.60	.44	1.28

*It should be noted that the mean is affected by the limited range of the test 9.0+ being the highest score possible. However, this test was selected to identify students with less than eighth grade functional ability.

Two students (4%) of the total practical nursing population were below the eighth grade level on vocabulary and reading. These students did not pass the State Board Licensing Examination. Since neither student with less than eighth grade functional vocabulary and reading

skills passed the S.B.L. examination, it would appear expedient that this deficit be brought up before admission into further practical nursing programs.

29 students (62%) of the total practical nursing population were below the eighth grade level on the mathematics section of the A.B.L.E. Remedial mathematics was taught as a supportive service during the Program in view of this gross deficiency.

It should be noted that the Arizona State Board of Nursing waived its requirement of tenth grade educational requirement for this pilot Project.

Arizona State Board of Nursing
Practical Nurse Licensure Examination
Correlations with A.B.L.E.

Factors	Pearson-r	Significance
Reading	.50	$P < .01$
Vocabulary	.43	$P < .01$
Mathematics	.55	$P < .01$

This data indicates a correlation between the S.B.L. Examination and the A.B.L.E. Examination, significant at the 1% level of confidence.

The A.B.L.E. in the author's opinion has demonstrated significance as a tool to determine eighth grade functional vocabulary, reading and math ability of a disadvantaged adult population.

This data supports Hypothesis #2 inasmuch as students with less than the traditional 10-12 grade selection criteria of functional reading, vocabulary and math ability can be successful on the S.B.L. Examination.

ACHIEVEMENT MEASURES

National League for Nursing Examination - N.I.P.

This standardized achievement test was the N.L.N., practical Nursing Achievement Test, N.I.P., Form 864, Nursing Including Aspects of Pharmacology. This 150 - item test includes questions on Medical-Surgical Nursing, Maternal-Child Nursing, Pharmacology, the Administration of Medications and Vocational Adjustment. This test was administered toward the end of the students' Program.

N.L.N. -- N.I.P.

Correlations with Selected Factors

<u>Factor</u>	<u>Correlation</u>	<u>Significance</u>
Faculty's Subjective Evaluation of Knowledge.	.77	P<.01
State Board Licensure Examination	.74	P<.01

National League for Nursing Examination - T.U.C.

The National League for Nursing, Practical Nursing Achievement Test, T.U.C., three units of content, Form 754, has been developed by the National League for Nursing and standardized on prior practical nursing groups. This 148-question test provides a total score and 3 sub-scores. Body structure and function, basic nursing procedures, nutrition and diet therapy are covered. The test was administered as intended late in the students' Program.

N.L.N. -- T.U.C.

<u>Factor</u>	<u>Correlation</u>	<u>Significance</u>
Faculty's Subjective Evaluation of Knowledge.	.73	P<.01
S.B.L. Examination	.81	P<.01

FACULTY'S SUBJECTIVE EVALUATION

Prior to receiving any data other than that from their faculty - student relationship, the faculty, as a group, assigned a quantitative score to students on three factors: knowledge, skill, attitudes.

Faculty's Subjective Evaluation of Practical Nurse Students

<u>Factor</u>	<u>Correlation</u>	<u>Significance</u>
<u>Re Knowledge</u> G.A.T.E.-General	.60	P<.01
Verbal	.66	P<.01
A.B.L.E.-Arith.	.54	P<.01
N.L.N.		
T.U.C.	.73	P<.01
Psych	.66	P<.01
N.I.P.	.77	P<.01
S.B.L. Exam.	.78	P<.01

Faculty's Subjective Evaluation of Practical Nurse Students		
	Factor	Correlation Significance
<u>Re Skills</u>	G.A.T.B.-General.	.38 P<.01
	Verbal	.48 P<.01
	A.B.L.E.-Voc.	.48 P<.01
	Read.	.38 P<.01
	Arith.	.31 P<.05
	S.B.L. Exam.	.66 P<.01
<u>Re Attitude</u>	S.B.L. Exam.	.31 P<.05

It is significant to note the variance of correlation between these three factors in relationship to success on predominately paper-pencil forms of assessment. (See Job Performance)

The Health Occupations Program faculty received intensive orientation to the total Program, including philosophy, objectives, learning theories and techniques for teaching the disadvantaged. It is believed by the author that these correlations are higher than would be found without this inservice education.

PERSONAL CHARACTERISTICS OF PRACTICAL NURSING POPULATION

Variables

Race

62% of the students were classified as white; 38% were classified as a minority racial group member.

Minority Membership Correlated with Selected Factors

Factor	Correlation	Significance
A.B.L.E.-Arith.	-.53	P<.01
Bilinguality	.87*	P<.01
Faculty's Subjective Assessment		
of Knowledge	-.50	P<.01
of Skills	-.27	P<.05
of Attitude	-.18	non-significant
National League for Nursing		
Three Units of		
Content	-.41	P<.01
Psychology	-.56	P<.01
Nursing Incl. Pharm.	-.58	P<.01
Arizona State Board of Nursing		
Licensure Exam.	-.64	P<.01

The above data reflects the fact that the Mexican-American student was the predominant minority member. It is felt that all of the above correlations probably reflect the fact that English is a second language to the majority of our minority population. Being bilingual, tests written in the English language are often misinterpreted.

It is a known fact that some of the Mexican-American students who had extreme difficulty with paper-pencil tests are performing satisfactorily on the job.

It should be noted the extreme variance of correlation between the faculty's subjective evaluation of student's knowledge (negative -.50), of student's skills (-.27) and of attitude (-.18). Our Program has classroom objectives which measure theoretical knowledge with paper-pencil tests. Skills are assessed in the clinical area where knowledge must be applied to perform skills effectively.

It is believed that this data reflects that paper-pencil tests may not be a valid measure for the minority members, particularly the bilingual. These findings would reflect a need for further research in this area.

Language

32% of the total student population were bilingual (English was a second language).

Variables

Bilinguality Correlated with Selected Factors		
Factor	Correlation	Significance
G.A.T.B.-General	-.31	P<.05
G.A.T.B.-Verbal	-.33	P<.05
A.B.L.E.-Arith.	-.49	P<.01
Faculty's Subjective Assessment of Knowledge	-.52	P<.01
of Skills	-.24	Non-significant
of Attitude	-.17	Non-significant
N.L.N.		
Three Units of Con- tent	-.38	P<.05
Psychology	-.60	P<.01
Nursing Incl. Pharm.	-.56	P<.01
Arizona State Board of Nursing	-.58	P<.01

The above data appears to reflect a consistent difficulty of the bilingual student on paper-pencil type assessment.

(See section on Job Performance).

It is believed that the above data would substantiate a need for questioning the validity of paper-pencil tests for the bilingual student.

A common argument is that the bilingual student must read current literature and charts in English, therefore there is no need to change our present system.

The author recommends the possibility of special classes on test-taking techniques, emphasizing the meaning of commonly used English words in the test construction process.

It is further recommended that further research be done in determining success factors of bilingual graduates on the job.

Age

Age in years was one variable of the inter-correlations. The population was all adult with an age range from 20 - 58, with a mean of 29.17, and a standard deviation of 8.21. There was little correlation between age and most of the factors under consideration. The correlation between age and State Board of Nursing Scores was a Pearson-r of .01 which is not significant. A correlation of .29 which is significant at the .05 was found between age and attitude as assessed subjectively by the faculty. (P<.05)

Variables

Highest

Grade

Completed

In School

The highest grade completed in school by the practical nursing Program students ranged from sixth (6th) grade to fifteenth (15th), with a mean of 11.02, and a standard deviation of 1.86.

No significant correlations were found between the highest grade completed in school and other factors under consideration. A lack of correlation, a Pearson-r of .01 was found between highest grade completed in school and the State Board of Nursing Licensure Examination.

Heads of

House-

hold

Thirty-three students (70%) of the practical nursing Program qualified as heads of household which meant they must meet the responsibilities of maintaining a home and most often children while also fulfilling the role of a student practical nurse.

No significant correlations were found between being the head of a household and any of the other factors under consideration. A total lack of correlation, a Pearson-r of .00 was found between heads of household and the State Board of Nursing Licensure Examination.

Having

Depen-

dents

The students averaged 2.0 dependents apiece, or a total of 94 dependents. ($P < .01$) A Pearson-r of .45 was found between having dependents and being heads of household, which might be expected. A Pearson-r of .35 was found between having dependents and the highest grade of school completed. ($P < .05$)

However, a lack of correlation, a Pearson-r of -.01 correlation was found between having dependents and the State Board of Nursing Licensure Examination.

SUCCESS AS MEASURED BY THE ARIZONA STATE BOARD LICENSURE EXAM

The Arizona State Board of Nursing administers a standardized test to eligible individuals as one of the requirements for issuing a license to practice practical nursing. Arizona, like 47 other of the 50 states purchases a test from the National League for Nursing, Evaluation Service. The scores on the Examination are reported as standardized scores with a mean of 500 and a standard deviation of 100. Arizona uses 350 as its minimum score for licensure.

The mean standard score for all Health Occupations Program graduates taking this Examination was 491.77 with a standard deviation of 109.57.

Out of the 47 students taking the Examination, 85% passed. 11% of the students scored between 300 and 350. It is believed that they will succeed on retakes. 4% made scores below 300. These 4% are the two students who did not have 8th grade functional reading and math scores prior to entrance into the Program.*

State Board Licensure Exam Correlations with Selected Variables		
Factor	Correlation	Significance
G.A.T.B.-General	.50	P<.01
G.A.T.B.-Verbal	.56	P<.01
A.B.L.E.-Vocabulary	.43	P<.01
A.B.L.E.-Reading	.50	P<.01
A.B.L.E.-Math	.55	P<.01
N.L.N.-T.U.C.	.81	P<.01
N.L.N.-Psych	.74	P<.01
N.L.N.-N.I.P.	.74	P<.01
Bilingual	-.58	P<.01
Faculty's Subjective Evaluation of		
Knowledge	.78	P<.01
Skills	.66	P<.01
Attitude	.31	P<.05
Highest Grade Completed	.01	Non-significant
Heads of Household*	.00	Non-significant
Having Dependents*	-.01	Non-significant
Age	.01	Non-significant

This population was probably unique in the numbers of women who were heads of households with dependents. It is significant that there appears to be no significant correlation between highest grade completed, age, being the head of a household, or having dependents.

*See Appendix E & F.

SUCCESS AS MEASURED BY JOB PERFORMANCE

A volunteer committee representing local health service agencies collaboratively designed a form by pooling the items for which they are currently evaluating personnel in their own health agency. (See Appendix Q)

Returns are in on 38 of the 47 students covering 3-6 months evaluations of on-the-job performance. The following Pearson-r correlations were run on this set of 38 students on the following factors:

Job Performance Correlations with Selected Variables

<u>Factor</u>	<u>Correlation</u>	<u>Significance</u>
GATE-General	-.15	nonsignificant
GATE-Verbal	-.26	nonsignificant
ABLE-Vocabulary	.24	nonsignificant
ABLE-Reading	-.09	nonsignificant
ABLE-Arithmetic	-.12	nonsignificant
Race	-.07	nonsignificant
Bilingual	-.03	nonsignificant
Instructor		nonsignificant
Knowledge	.03	nonsignificant
Skill	.18	nonsignificant
Attitude	.14	nonsignificant
E.L.N.		nonsignificant
T.U.C.	-.03	nonsignificant
Psych	-.06	nonsignificant
N.I.P.	-.03	nonsignificant
S.B.L. Exam	.12	nonsignificant
Age	.07	nonsignificant
Highest Grade	.08	nonsignificant
Heads of Household	.05	nonsignificant
Dependents	.20	nonsignificant

These findings appear to be significant inasmuch as they are not at all consistent with the other data presented thus far. No significant correlations were found with Job Performance.

Design for Evaluation of On-the-Job Performance

The basis for quantifying the results of the evaluations returned by the employing health facility for graduate follow-up was by using the evaluation form designed by a committee of health facility personnel. Scores were obtained by giving a relative weight to each check mark according to the following chart. (For description of factors-See Appendix Q)

Factor	Quantitative Value of Check Marks on Evaluation Form			
I. Job Knowledge	12.5	7.2	4.2	0
II. Quality of Work	12.5	7.2	4.2	0
III. Quantity of Work	12.5	7.2	4.2	0
IV. Initiative	12.5	7.2	4.2	0
V. Cooperation/Attitude	12.5	7.2	4.2	0
VI. Patient Relationship	12.5	7.2	4.2	0
VII. Dependability	12.5/0*	12.5/0*	12.5/0*	12.5/0*
VIII. Appearance	12.5/0*	12.5/0*	12.5/0*	12.5/0*

Sample range of scores if students received checks in specified columns.

68.2-	43.2-	25-	0-
100	68.2	50.2	25

*If satisfactory on Dependability and/or Appearance, each factor was worth 12.5. If unsatisfactory on one or both, 0 for each

Rating Scale-Job Performance

0-25	Inadequate
26-50	Low-Average
51-68.2	Average-Above average
68.2-100	Excellent

The class mean for the returns to date has been 68.6 with a S.D. of 12.42, would indicate graduates are performing successfully on the job.

It is interesting to note that only one factor considered vital to the employers--Job Knowledge--is a direct assessment of primarily cognitive ability. The other measures reflect skills and attitudes as well, for which few tools of measurement have been designed or validated for the practical nurse. This would reemphasize measurement by performance objectives which include cognitive, psycho-motor, and attitudinal factors.

Part One
SUMMARY

The following commentary will compare Project findings with related research as presented in Part One, Chapter II.

GATB

The Ubbink Study found all S.B.L. Exam failing students received a score below 89 on the GATB.

The Project results in contrast showed 69% of the students who scored below 90 on the GATB were successful on the S.B.L. Exam.

Miss Ubbink did suggest a need for further study on the bearing of the language factor on achievement on the GATB, which was also indicated in the Project Study.

Ubbink, Tomlinson, Martin, et.al. along with this Project, found a correlation between the GATB and S.B.L. Exam, as well as other cognitive type measures.

Even though nonsignificant, the inverse correlation between the GATB-General, as well as the GATB-Verbal and Job Performance would bring up a question which was raised in the Tomlinson Study.

The question would be identification of the purpose of evaluation of ability and achievement. Is it toward the goal of passing the S.B.L., which is required in order to practice as a P.N.? Or is our goal the evaluation of knowledge, skills, and attitudes which will predict the ability to perform safely and effectively in the role of a practical nurse?

ABLE

The significant correlations between the ABLE and the S.B.L. Exam would indicate that it was a fairly good predictor of success with this population.

However, the positive correlation, though nonsignificant, between job performance and ABLE (Voc.), seems to indicate that vocabulary might be essential to the performance of a practical nurse. The negative correlations, though nonsignificant, between reading and job performance, would raise a question as to the amount and kind of reading necessary to perform safely and effectively as a practical nurse.

N.L.N.

Tomlinson and group found significant correlations between the N.L.N. Examinations and the S.B.L. Exam, which was repeated in this Study.

This was consistent with the finding of Ubbink who found students who scored very high on the N.L.N. also scored very high on the S.B.L. Exam. Conversely, students who scored very low on one, scored very low on the other.

No significant relationships, however, were found between N.L.N. scores and job performance in the Project findings.

This data, like the ABLE and GATB, raises questions as to the correlations of N.L.N. and job performance. Further study should be done on the relationships between each of these factors and job performance.

Faculty Evaluations

According to Ubbink, the faculty should be able to predict with reasonable accuracy if, and who, the failures in a class on S.B.L. Exam, will be.

In concurrence with the above, the faculty's evaluation of knowledge, skills, and attitudes had a positive correlation with S.B.L. Exam scores, as well as GATB (General and Verbal), ABLE (Arithmetic), and N.L.N. (T.U.C., Psych, N.I.P.).

Little correlation was found, however, between the faculty's evaluation and job performance as reported to date.

Race

Tomlinson and group found the highest dropout rate among the non-white (45.5%).

Ubbink found only those of Caucasian race received scores of 650 and above. She also reports 98% of the failure-scoring graduates were non-white, which she felt was a reflection that national tests are usually geared to a certain group, which does not adequately consider the language and cultural factors of the non-white population.

In concurrence with their findings, the non-white students' scores on all of the cognitive-type measures used in this Project, had significant inverse correlations.

It is interesting to note that a significant correlation was not found between race and job performance.

Language

The bilingual factor tended to portray the same pattern as the race inasmuch as most of our non-white students were Mexican-Americans, with English as a second language.

Strong inverse correlations were found between the bilingual student and cognitive measures.

However, no significant correlations were found between being bilingual and successful performance on the job.

Highest Grade Completed

Tomlinson and group found 53.8% completion rate among students with less than 12th grade education. They report a significant correlation between the amount of education and completion of the program.

L.J. Bailey found that students' grade point average in high school was significantly correlated with P.N. classroom achievement and State Board achievement.

L.J. Bailey also found State Board scores were significantly correlated with all ability and achievement measures, except patient relationship rank.

In a review of studies, all programs in Illinois and Iowa required at least a tenth grade education or its equivalency; 42% required high school completion or its equivalency.

Concurrently, Ubbink found the higher the education the student achieved, the greater chance for success.

In contrast, in this Study, no significant correlations were found between the highest grade completed and any other factors under consideration. The author suggests that with this unique population, with the highest grade completed in school ranging from 6th grade to 15th grade, with a mean of 11.02, the students demonstrated the expressed fact that they saw this program as a real opportunity which they had never had before.

It is believed these findings reflect the facts that the students applied themselves conscientiously to their task and that the program was designed to meet their educational needs.

Heads of Household with Dependents

In the Tomlinson group study, they found 42% of the dropouts had children at home and 50% had dependents.

It is interesting to note that in the Project no correlations were found between this factor and any of the other measures.

Number of Variables Related to Success

In Appendix F, the students were ranked from 1-47 in order of their scores on the S.B.L. Exam from high to low.

The number of characteristics (variables) which would require adjustments on the part of the student in order to succeed were plotted.

The following chart shows the average number of variables per student in relationship to S.B.L. scores.

<u>Student S.B.L. Exam Scores</u>	<u>Average No. of Variables per Student</u>
600+	.8
500+	2.0
<u>Passing 400+</u>	<u>3.2</u>
Failing 300-350	4.6
200	7.5

This data would indicate a need to reduce the factors which would require adjustments to a minimum prior to admission into a practical nursing program. (For example, bring up reading deficiencies prior to program admission.)

It should be further noted that some of the characteristics (e.g. race cannot be changed. If there is no correlation between race and job performance, perhaps we need to take a closer look at our assessment procedure.

Part One
CONCLUSIONS and RECOMMENDATIONS

Hypothesis #1 was that by employing educational innovations, success rates can be increased.

Success for the total program was measured by completion of program with a salable skill. With this as the criteria, the program reports a 90% success rate with a population which across the nation reports 50-70% completion as successful. (See Part I, page 7).

In relationship to the practical nursing program, using the State Board Licensure exam as one criteria for success, the program reports 87% successful completion. 55% of the students scored above the national average score of 500.

These findings would tend to support this hypothesis.

Hypothesis #2 was that students who do not meet traditional selection criteria may be successful health occupational personnel if given a real opportunity to succeed.

The student characteristics, presented in Appendix D, indicate that 28% of the students were below 90 on the GATB (General), 13% were below 85 of the GATB (General), 62% were below 8th grade functional math, 4% were below 8th grade functional vocabulary, and 4% were below 8th grade functional reading. The population was almost entirely disadvantaged, with a mean of 11th grade school completion and a range from 6th through 15th grades.

Although a large portion of this population would not have found entrance into most traditional programs, their success rates compared favorably to traditional programs.

This data would tend to support Hypothesis #2.

Hypothesis #3 was that many persons who achieve success at the assistant level would continue to the next level if given a real opportunity.

At the time of this report, 52 students (18%) of the total enrollment had already completed at the practical nursing level. Approximately 60 additional students will be completing within the next few months which will raise the percentage to approximately 38% of students who have continued or will continue in the immediate future from the nurse assistant to practical nursing level.

It should be noted here that a large number of students have stopped to work as a nurse assistant prior to continuing to the practical nursing level. They plan to either gain additional experience and/or further basic education. However, they did express the fact that they plan to continue at some point in the future. Our experience with these students tends to confirm the hypothesis although it would take a longitudinal-type study to statistically follow their behavior to determine its significance.

Hypothesis #4 is that increased numbers of qualified persons will be retained in the health field if there is a good opportunity for mobility within the field.

Accurate data was not accumulated to test this hypothesis, inasmuch as no records were kept to record the numbers of times nor the direction of change of goals from time of entrance until completion of the program.

The author suggests this is an area for further exploration. However, it should be noted that the faculty verbally reported many changes of student's goals during the program.

Hypothesis #5 was that demonstrated performance is a better predictor of success on the State Board Licensure Exam for practical nursing than length of program.

Demonstrated performance was measured by meeting classroom and clinical performance objectives which were written and revised by faculty and students for their validity during the program.

The S.B.L. Examination scores reported in this study were made by students who went through the program in its formative stages. The success rates reflect 85% on State Board Licensure Examination. More significantly the mean score for the group was 491.77 which compare favorably with the national average of 500.

The time involved for the students to complete the practical nursing program varied from 7 months through 15 months. This time variation would tend to support the fact that it is more significant to be able to demonstrate knowledge, skills, and attitudes than to spend x number of days in a program.

These findings are presented in view of the known weaknesses of this research:

1. Uniqueness of the population.
2. Relatively small number of students.
3. Large number of variables.
4. Length of time on the job.

It is believed that these findings do raise questions which substantiate the need for further research, particularly in the relationships between our ability and achievement measures and successful job performance.

PART II

CHAPTER I

COMPONENTS OF THE HEALTH OCCUPATIONS PROGRAM

Rationale

The hypotheses expressed in Part I of this Study were the bases for the design of the Health Occupations Program. It was believed by project supporters that given the advantages of educational technology and a personally-involved faculty applied to a well-developed curriculum, disadvantaged adult students could and would find higher degrees of success in health occupations than had been possible in traditional programs.

Philosophy

The program was based on the philosophy that all persons have a desire to acquire more knowledge, and that in order to achieve this knowledge, they must experience success in educational endeavors. This success could be obtained in small, successive intervals with a curriculum designed on a unitized basis. It was further believed that persons who feel fulfilled and satisfied will be valuable and functional members of society. The program was designed to assist disadvantaged adults to find job satisfaction and self-fulfillment by becoming successful in a health occupational role. (See Appendix G for STATEMENT OF PHILOSOPHY)

Objectives

The following were broad goals which were set forth in the inception of the program:

1. To assist the Tucson community in meeting increasing needs for qualified health personnel by:
 - a. Preparing graduates who can perform effectively on the job in the health field
 - b. Preparing persons who lack salable skills for employment in the health field
 - c. Minimizing attrition rates from the health occupational programs
 - d. Facilitating the opportunity for mobility in the health field
2. To compile and evaluate data for research purposes which can be used as a basis for further research and development toward the above goals.

(For student objectives as they relate to the practical nurse, see Appendix H).

PART II

CHAPTER II

CONCEPTS APPLIED TO ENHANCE STUDENT SUCCESS

Career Mobility

Since man has been taught to evaluate his worth to society and sometimes his worth in the sight of God by the level of his occupation and the quality of his performance in it, the Health Occupations Program was designed to enhance the opportunities for mobility by allowing the student to share in the planning of his future. It was believed by the Project conceptors that people should not be locked into jobs without an opportunity for mobility--horizontally, as well as vertically.

Vertical mobility was provided in the health occupations program through the utilization of a core curriculum. A student completing the core would receive a certificate as a nursing assistant. The student had the option of working at this level or continuing to add more units to become a practical nurse. As stated earlier, 289 students have been enrolled into the program. 52 (18%) have completed the practical nurse program. 91 students are currently enrolled, many of which will be completing the practical nurse program within the next few months.*

Lateral mobility was provided by allowing a student who had completed the core to take 1 additional unit to become a ward clerk (unit clerk), physical therapy aide, central service aide, or home health aide.

This program is in line with the Arizona State Nurses' Association recommendations that faculties of established educational programs in nursing immediately develop methods by which the experiential and educational learning of those persons whose goals in nursing have altered may be realistically evaluated. They suggested that every effort should be made to delete repetitive learning.

The author feels that one reason for the high success rates was that students had the opportunity to select and complete in the area in which they felt the greatest degree of satisfaction and success.

Curriculum Design (Core Curriculum)

A core program can provide a framework for continuing education when designed with continuity, sequence and integration which is sufficiently flexible to take into account the diverse backgrounds and experiences of adults and enhance the opportunities for mobility.

In designing the curriculum, an occupational analysis was utilized to identify knowledges, skills, and understandings common to more than one health occupation. The knowledges, skills, and understandings then became the basis for the 8 basic units in the core curriculum.

*See Appendix I for Career Ladder Concept

Appendix J for Curriculum Guide

Appendix K for Practical Nurse Program

Appendix L for Practical Nursing Student Final Record

All students coming into the program take units 1-8, upon completion of which they receive a certificate as a nurse assistant. This is important for the disadvantaged student because this indicates they have succeeded at the first level and are employable in this role. During or after the core, a student may select one additional unit (from 9-13) which will prepare them for various assistant level positions. The students may complete 6 more units after the core to become practical nurses.

In concurrence with other research current findings, core curriculum students appear to:

1. Become oriented to and gain understanding of health service resources.
2. Gain understanding of and experience with team relationships.
3. Become acquainted with health field ethics.
4. Gain skills to achieve and maintain asepsis.
5. Develop beginning skills in maintaining environments conducive to patient welfare.

Unitized Self-Learning Packages with Defined Terminal Performance (Behavior) Objectives*

Success in small steps appears to be a key to reinforcing success which is a requisite for success. Repetitive failure has been the experience of most of our students. The curriculum was designed into units, with lessons in smaller units (modules), so that the student had a system for small successes which inherently accumulated into larger successes.

This disadvantaged population had many realistic personal problems which demanded absence from the program for prolonged periods of time. In a traditional program, students would either drop or be dropped. However, the curriculum in a unitized form gave the students a road map which they could follow. It showed them the distance, along with the type of highway. When students were forced to be out of the program for various periods of time, they could work on the material at home and return to school when the crisis was over.

The faculty used the contract method of encouraging students to set their own goals. For example, by having the curriculum unitized, a student can contract (agree with the instructor to perform) to complete one module a week, for instance. This proved to be a means of helping the students learn to plan and organize their time and energies. It also appeared to be a motivational factor.

Each lesson (module) was designed with the same format:

1. Rationale - reason why the lesson was important to their goal (role)
2. Objective - a broad goal to be accomplished
3. Assignment - how to go about learning about the goal
4. Classroom objectives - what the student must know in order to pass the paper-pencil tests
5. Clinical objectives - what the student must be able to perform in the clinical area (includes knowledge, skills, and attitude)

*See Appendix M for Unit Descriptions
Appendix N for Curriculum Outline
Appendix O for Sample of Unitized Lessons

It was believed that the purpose of the instructional objectives was to make clear to teachers, students, and other interested persons what it is that needs to be learned. Educational objectives became the criteria by which materials were selected, content was outlined, instructional procedures were developed, and most significantly, how tests and examinations were prepared. All aspects of the educational program were means to accomplish the basic educational goals.

It is believed by the author that curriculum revision, in a society as fast-paced as ours, must be constant; it will never be completed. In view of the fact that change is so rapid, educators cannot cling to content of earlier decades, or be ineffective in curriculum development, if education is to be relevant to the needs of the student and of society.

It is recommended by the author that all persons in the State of Arizona, who read this project report, seriously consider the possibility of a behavioral data bank located in the State level which would be easily accessible to all health occupations educators in the State of Arizona. It is believed that a cooperative, collaborative effort by leading professionals in health services and health education could, through the use of computerized technology, identify minimum behaviors required of each health occupational role. This behavioral data bank would and should be revised on a frequent, systematic basis to keep abreast of the changing needs and roles in the health field in the State of Arizona. It would serve the health service agencies by helping reduce the confusion which currently exists and will increase with our traditional systems. It would serve the health educators in planning and implementing educational programs which are current and relevant. It would serve the student by enhancing the opportunities for mobility within and between health occupational program. It is believed that the behaviors which have been identified in this project and evaluated by many of the health service agencies in the Tucson area could serve as a beginning to establish a behavioral data bank at the assistant and practical nursing levels.

Open-Entry, Open-Exit Concept

Based on the concept that a student learns--not the class, the health occupations program was designed for individualized instruction where the student would move at his own pace of learning through the program.

Our results with this concept were consistent with the findings of Edling who reported the following results in changed behavior of learners and teachers: interest in school activities; disappearance of most traditional discipline problems; increasing number of high scores on specific achievement measures; harder work by teacher, but with a feeling of satisfaction that efforts were helping students.

An additional advantage was that if illness, emergencies required absence from the program for a relatively short period of time, the student did not need to be terminated or make up time, per se, but returned and resumed where they left off.

One limitation was the vast quantity of materials needed which were difficult to develop and costly. It is believed by the author that this difficulty along with the cost factor would be indication for a need for a State Guide to be used by new programs with smaller faculties who cannot possibly accomplish this task alone. Clarification should be made that a State Guide does not in any way decrease the individuality of the teaching program nor does it reduce the opportunity for creativity on the part of the individual teacher. In fact, the reverse is true. With the bulk of the curriculum development initiated, it would allow the instructors to spend more time on creativity and less time on individually deciding in what depth or to what degree to present which topic.

Open-entry, open-exit concept means that our program was budgeted for x number of students. If a student were to withdraw or complete any portion of the program and choose to seek employment, that student could be replaced with another, regardless of the day or date.

The open-entry, open-exit concept was adopted on the belief that time alone is not a factor of proficiency. This was reinforced when we found a wide variation in the time it took the individual students to complete the core. The program was designed with the belief that it would take an average student approximately 3 months (12 weeks) to become a nurse assistant. It was found that students did complete the core in as little as 5 weeks and as many as 24 weeks. The practical nursing portion of the program has been completed in as little as 7 months and as many as 15 months. In traditional programs, fast students often become bored when forced to sit through x number of classes, and, conversely, slower students often drop or are dropped when they do not learn in the same length of time as the class.

Educational Technology - Multi-Media Approach

The Health Occupations Program employed a multi-media approach to education because it was believed that this is a more systematic approach to learning. More important than the media and the machines involved are the potentials for new dimensions of freedom for teachers which is one of the most important parts of the reorganization of instruction. The Program teachers were able to have more time to work as professionals at critical points in the learning process and more control of the learning environment.

Instructors prepared a library of recorded data on cassettes to correlate with each module (lesson) which covered the essential content which they would have presented on the lesson in a traditional classroom setting. This provided students a means to work ahead of the group, to listen to the material if they were not present during classroom activities, and to listen repetitively if they learn slowly. Guest speakers were also taped and included as part of the resource materials. Audio-tapes were also used for students to record and evaluate their own communication skills.

The video tape recorder (V.T.R.) proved to be extremely valuable for motivated sessions in helping students to evaluate their own skills against a given set of criteria and for role-playing activities which included opportunities to practice and evaluate health occupational-type situations without the threat of the clinical areas.

The overhead projector allowed the faculty to prepare valuable tools (transparencies) inexpensively. The overhead has the advantage of allowing eye-contact with the students while using a visual aid in a lecture-discussion type presentation.

Commerically-prepared materials such as films, filmloops, filmstrips, and records have been utilized heavily to add variety, to stimulate involvement, to allow students to learn at their own pace. (See Appendix P for Book List).

It should be emphasized that these media were the means--not to be confused with the end--the performance objectives.

It has been brought to my attention that other programs which have attempted this type of program have allowed students to go "on their own" almost entirely. This was not the case in the Health Occupations Program. Students were in the clinical area under supervision a minimum of 12 hours per week from the second week that they were enrolled into the program. Classes were held a minimum of 18 hours in the core and 16 hours in the balance of the program. During this classroom time, teachers were encouraged to be innovative, creative, actively encouraging student involvement in a variety of stimulating classroom activities--discussions, role-playing, demonstrations, return-demonstrations, etc., with a minimum amount of lecturing. It was believed by the author that this classroom involvement was expedient for the success of the majority of the students. They tend to learn and be reinforced from each other as well as from the instructor. The unitized packages and the audio-visual materials were guides and tools, but not replacements of classroom or clinical activities.

Pass-Fail System of Grading

Upon successful demonstration of the classroom performances, primarily paper-pencil type tests, and clinical performances, which included knowledges, skills, and attitudes, the student was given a grade card stating she/he had completed the unit by successfully demonstrating both classroom and clinical performances.

Grades were not given in the traditional manner.

It was believed and demonstrated that receipt of a grade card for completion of one unit was a motivational factor to complete the next unit.

STUDENTS' EVALUATIONS OF THE PROGRAM

Since a program exists for the student, the following statements were recorded as indicative of their perception of the project as a challenging, rewarding experience:

"I am very pleased with Project HOP. I think that the curriculum is one of the best of any school, including Kress. The instructors are all very concerned that we understand, and learn thoroughly our work. They take extra time to help us and are not pushy. I personally am very thankful for this opportunity. I feel confident that I am getting a thorough training for L.P.N.."

---Letty Kelly

"I think Project HOP is excellent. I was out for two months with injuries received in a car accident and was able to return and begin where I had left off. Thanks for this chance!"

---JoAnne Fry

"What Project HOP means to me. To me I think it's great. Because if someone or a group of people have the patience to put up with me and have gotten me to where I am, it's got to be more than great. This program really bends forward and backwards to get us where we want to be, or go."

---Nellie R. Torres

"I dig Project HOP because we have much freedom to work at our own speed with no pressures to finish by a dead line. We have an opportunity here that we couldn't get anywhere else because of lack of finances."

---Karen Garza

"Project HOP has opened the door to a new life for me, given me encouragement, and the promise of a successful future in a challenging and rewarding profession. Without Project HOP, it would have been many years before I could have, if at all, received any further education. I will always be grateful to all those who took the time to care about me."

---Joan Lane

FACULTY EVALUATIONS OF PROGRAM

The success of this, like any other program, depends on the faculty who implements it. Most of the faculty who were employed had expertise in the health field, but lacked teaching competence. Competence to use innovative approaches to education needed to be developed. Weekly faculty-in-service programs were planned and conducted by the project director to develop knowledges, skills, and experience in the teaching/learning process. Philosophy, objectives, functions, principles, conditions, materials, and methodology were covered in theory and practical application as they could be related to the health occupations program.

Faculty members, with the Director, prepared the individualized instructional materials which lead the students to the objectives. Innovations often require additional time (e.g.- writing, re-writing objectives). The teachers were willing to contribute extra time and effort when they believed some benefit would accrue to the students. However, most of the additional time required was found outside regular school hours. Effort was made not to add to the teachers already overburdened existence. Since education serves both as a leader and follower of society, creative and courageous adaptation to change was our challenge in designing this system for preparing health occupational personnel.

The following statements from faculty members reflect their feelings about their experiences in the project:

"Rewarding experience in seeing the personal growth of students and a learning experience for my personal growth to be associated with such new ideas and challenging experiences,"
---Carol Orin

"I find teaching for Project HOP not first a "job" but a rewarding and enlightening experience. I strive to share this feeling with the students."
---Susan Kane

"Students are anxious to have something for the first time in their life that will prepare them for service. It is rewarding; I can help them, I've been there."
---Jerri Lewis

"It is challenging. You learn to use many different resources in this type of program. It offers much self-satisfaction."
---Audrey Englestad

The late Perle Ayers, a sociologist at Berea College, was instrumental in developing many constructive programs. He said there are four things one can do about change:

1. "Ignore it--pretend things are just as they always have been and will be.
2. Resist it--prefer things not as good as they could be for fear they might be worse than they are.
3. Adapt and accept with an easy, false enthusiasm under the delusion of action, and
4. Design and create the future--any true leader always is exposed to risk, but he takes the risk in the hope of real gain, where inaction only can court certain disaster."

The health occupations program discussed here was designed in hope of real gain. It is hoped that this project will open doors for corpsmen and other persons with some health-service training to continue their education in the health field, building on what they already know. It is further hoped other health career educators will join in pooling efforts, collaborating to develop increasingly more effective systems for health occupations education.

Part Two
SUMMARY and RECOMMENDATIONS

The concepts of a core curriculum career ladder from nurse assistant (aide) level to practical nurse level, unitized self-learning packages and a multi-media approach to education have proved feasible and practical with a unique population. Implementation of these concepts together with a personally-involved faculty and supportive services of the agencies has led to student success and to the broad goals of the project. (Page II-1)

It is believed by the author that these concepts have equal practicality in traditional programs. It is recommended that further work be done toward implementing more of these concepts into our traditional programs and the integration of disadvantaged students into the mainstream of our educational system.

Identifying the Disadvantaged

A provision of the Amendments to the Vocational Education Act of 1968 is that persons who have not heretofore been adequately served by the regular Vocational Education programs shall have ready access to vocational instruction designed to fit them for employment in a recognized occupation. The "Act" identifies such individuals as the disadvantaged.

What is needed in order to reach these persons and ensure better education for them is to develop their own criteria that will be used to identify disadvantaged persons. As a beginning framework for identifying and selecting disadvantaged persons, the following qualitative guidelines are suggested:

Identifying Disadvantaged Persons

A. Persons With Academic Needs

1. Students with low achievement scores and who are not classified as mentally retarded.

For example: Students who are capable of learning, and with the patience and the opportunity to participate in a different kind of program, may be motivated toward higher levels of achievement.

2. Students who have not found an interest in learning or in school work as a result of poor educational background and home environment.

For example: Students who have become alienated and disenchanted with the school system and need encouragement and guidance toward a meaningful academic and vocational program.

3. Students who demonstrate a continued pattern of failing and seem discouraged in their school work.

For example: Students who are dropout prone and need help to become work-oriented and need encouragement to continue their education for job preparation.

4. Students who have poor speech, low-level reading ability, and limited formal vocabulary who are not mentally deficient.

For example: A high school student who has lower than seventh grade reading skills.

5. Students who have linguistic barriers.

For example: Students who come from homes where a foreign language is spoken and students of parents who retain foreign-language idioms despite assimilation into the local culture.

continued..

Appendix B

6. Students who have poor attendance records and are not making normal academic progress in regular classes.
For example: Students who do not attend school regularly and find it difficult to meet the regular academic standards of the high school and who need special supportive services and additional attention.
7. Students who have dropped out of high school and are unemployed or underemployed and need training.

B. Persons With Special Social Needs

1. Persons from hardcore, poverty areas who live apart from the mainstream of the community.
2. Persons who display a negative attitude toward learning and who are plagued by a negative self image.
3. Persons who have high incidences of involvement with the police and are hostile toward law and order.
4. Persons who lack personal motivation and lack experiences with successful "models" of their own ethnic group.

C. Persons With Special Economic Needs.

1. Persons from low-income families who have nutritional and other health needs and/or lack adequate finance to obtain essentials for going to school (transportation, school supplies, etc.).
2. Persons whose parents are dependent upon public assistance.
3. Persons who are economically illiterate.

TUCSON PUBLIC SCHOOLS
PROJECT HOP
STATEMENT OF PHILOSOPHY

Appendix G

The general educational philosophy of the Tucson Public Schools District One is accepted by the faculty of Project HOP. In addition, we believe that all persons have a desire to acquire more knowledge, to learn more, and that to achieve this, they must experience success in education endeavors. We believe that Project HOP allows and helps each student to succeed at some level. We further believe that persons who can feel fulfilled and satisfied will be valuable and functional members of society in the American tradition.

We believe that mobility in health field careers will primarily increase the numbers of persons who can find success and make effective contributions to the health occupations; and secondarily will allow students who have the desire and the ability to continue to move vertically and/or horizontally in the health field.

We believe that our goal is to identify common areas of knowledge and skill in the health fields and to develop a curriculum based on these common areas. This curriculum will identify and assess those terminal behaviors essential to successful job-entry level performances in more than one of the health occupations. We believe that curriculum development in an everchanging society and in a dynamic field is a continuous, on-going process. The present curriculum represents a beginning which will be continually evaluated and revised to remain current and useful. We believe that utilization of modern educational technology will enhance the learning process.

It is also our belief that it is essential to provide clinical experiences in the health field correlated with classroom activities. This correlation of experiences must be directed toward achievement of clearly defined written objectives leading to the identified terminal behaviors.

We believe "The unique function of the nurse is to assist the individual, (sick or well), in the performance of those activities contributing to the health or its recovery, (or to peaceful death), and that he would perform unaided if he had the necessary strength, will, or knowledge. And to do this in such a way as to help him gain independence as rapidly as possible."

We believe that practical nursing is an integral and essential part of nursing services which helps people to recognize and achieve optimum health - a fundamental right of every individual.

We recognize the legal authority for the practice of practical nursing in Arizona which indicates that licensed practical nursing means the performance of technical skills performed under the supervision of the registered professional nurse or physician registered professional nurse in more complex situations.

We believe that the ultimate goal of all nursing education is the welfare of patients. The primary, immediate goal of a practical nursing program is the education of students.

The faculty members of Project HOP believe that the education program we are developing will produce practical nurses able to function in their role with vocational efficiency and personal satisfaction, but particularly with concern and knowledge aimed at the well-being of the patient.

Accepted by the faculty of Project HOP
May 19, 1971

Practical Nursing
STATEMENT OF STUDENT OBJECTIVES

The Health Occupations Cluster Curriculum is designed to provide experiences needed to enable the nursing students to perform the functions recommended by NAFNEs and The Arizona State Nurses Association (Proposed Joint Statement, 1970):

- I. The practical nursing students* will participate in the planning, implementation, and evaluation of nursing care and will be able to teach the maintenance of health and prevention of disease.
 - A. The student will be able to recognize optimum health and symptoms of deviation from same.
 - B. The student will be able to demonstrate skills in observing, recording and reporting to immediate superior.
 - C. The student will be able to demonstrate skill in applying basic principles in performing technical procedures, adjusting these procedures to the needs of the individual patient.
 - D. The student will be able to perform personal and supportive health care tasks for patients of all ages, applying principles of prevention, therapy, and rehabilitation.
- II. The practical nursing students will be able to recognize and apply fundamental principles of human behavior, positively and effectively.
 - A. The student will be able to communicate with patients, health team members, health facility administrators and persons in the community, using appropriate methods and terminology.
 - B. The student will be able to function effectively as a person and as a member of a health team.
- III. The practical nursing students will be able to recognize the health field as a dynamic social force in a changing and complex society.
 - A. The student will be able to identify trends of nursing.
 - B. The student will be able to recognize functions of nursing organizations.
 - C. The student will be able to recognize and demonstrate behavior which complies with the legal aspects of practical nursing.
 - D. The student will be able to contribute toward activities which promote nursing in the community.
- IV. The practical nursing students will be able to move (if they desire and appear to have the ability).
 - A. The student will be able to move laterally in the health

continued..

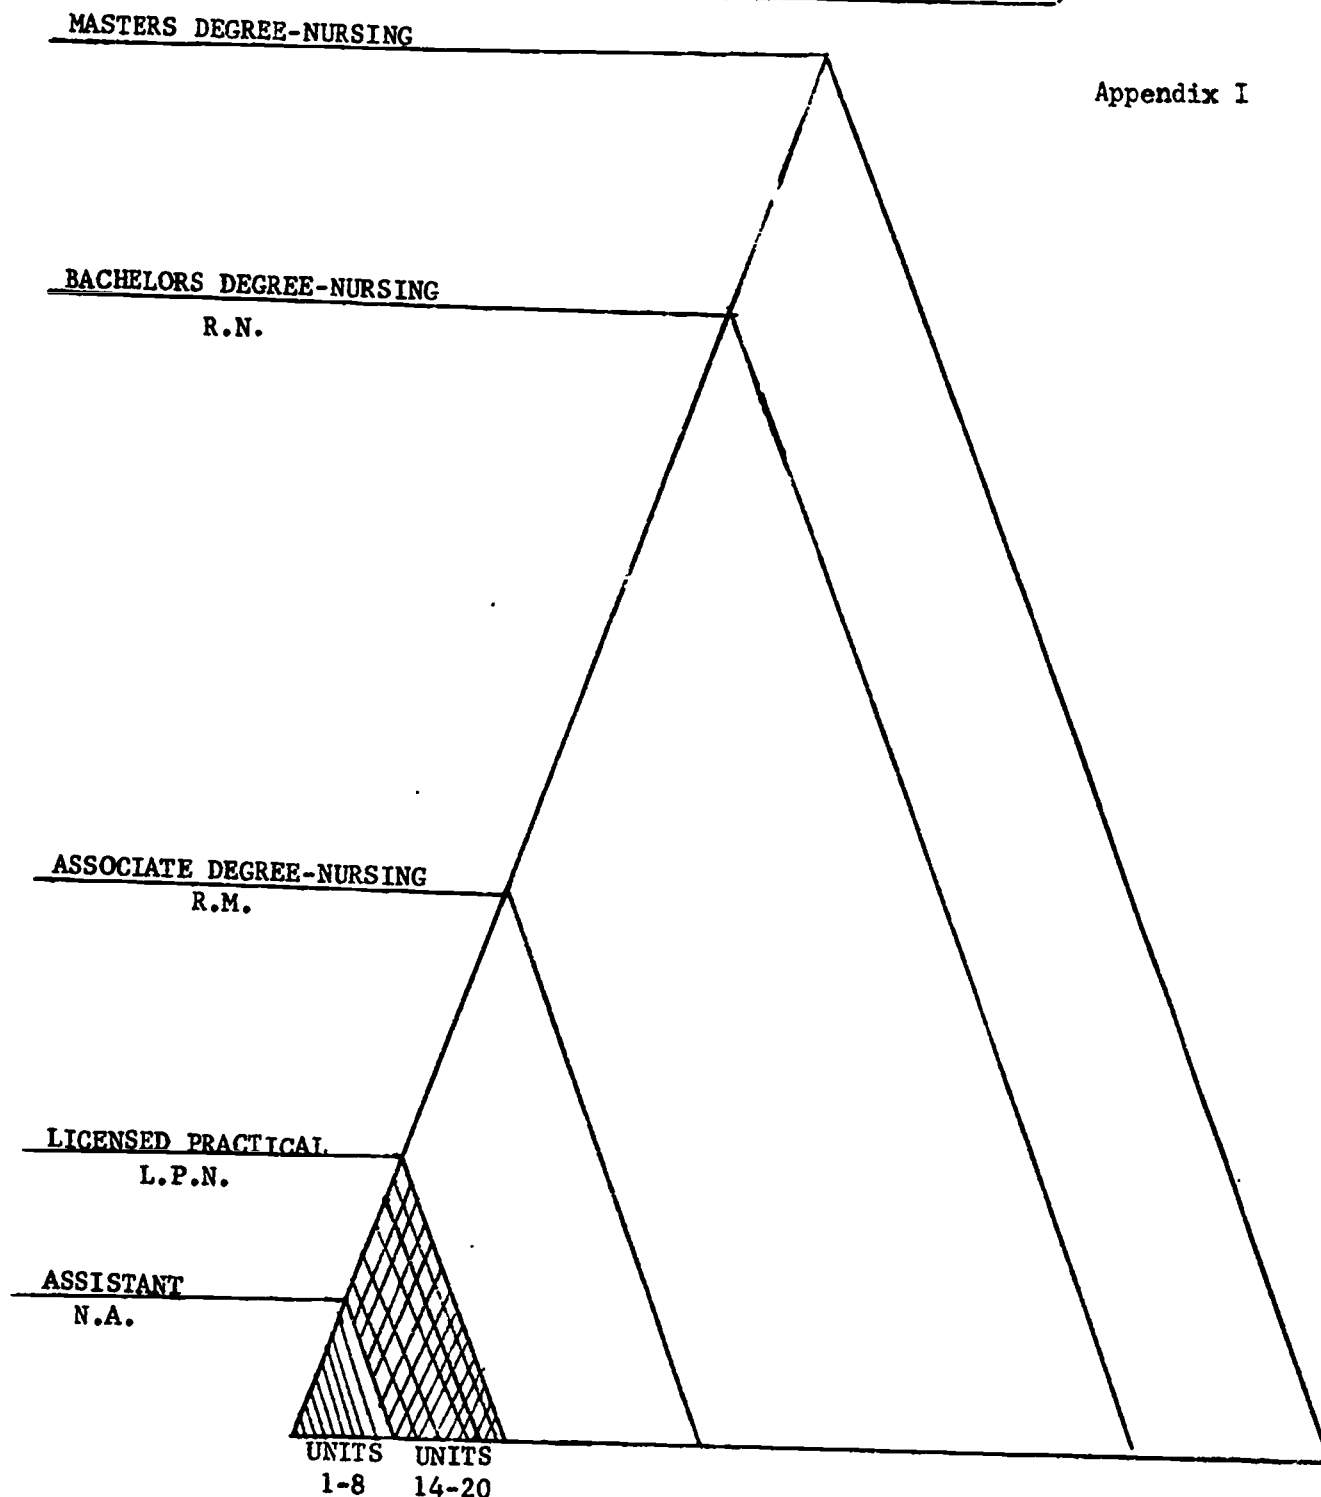

Appendix H

field (e.g., on assistant level--from nurse assistant to unit clerk--by adding to current knowledges, skills, without replicating acquired knowledges and skills.

- B. The student will be able to move (if they desire and appear to have the ability) vertically in the health field (e.g., from assistant level to practical nursing level by the completion of additional units.

UNIT DESCRIPTIONS

- UNIT 1 -- Overview of Health Occupations
This unit provides a short look into the various job opportunities in health occupations. The student will gain understanding of health facilities on a local, state, national, and international level.
- UNIT 2 -- Human Relations
This course is designed to help students look at themselves and through the use of audio visual aids and small groups understand how they will change or improve behavior to adjust to new job situations as a nursing assistant.
- UNIT 3 -- Health Care Skills I
The student is shown the correct skills to use to keep patients safe. He will learn basic first-aid procedures.
- UNIT 4 -- Anatomy & Physiology
This unit includes a basic knowledge of anatomy and physiology related to the needs of health care workers who require a general understanding of how the body is formed and how it functions in normal health.
- UNIT 5 -- Nutrition and Diet Therapy
This unit is designed to teach the student basic nutrition for normal adults and introduce him to the basic hospital diets.
- UNIT 6 -- Asepsis
Asepsis as it applies to the hospital environment is discussed and the student is taught to protect patients, nursing staff, and himself from disease.
- UNIT 7 -- Medical Terminology
This unit includes a basic knowledge of medical terms related to the need of health care workers who must be able to understand and communicate effectively with other health care workers.
- UNIT 8 -- Nursing Care I
The role and responsibilities of the nurse assistant are presented and discussed with development of the basic knowledge and skills needed to give nursing care to the individual. Principles of other health care courses are included in evaluating student performance.
- UNIT 14-- Peds Nursing
Pediatric nursing is taught with a realization of the nurses' need to develop a broad and deep perspective of the meaning of nursing children. Objectives are obtained through class work and clinical experience so they will continue to grow as he incorporates fundamental principles while caring for the hospitalized child and his family.
- UNIT 15-- Aspects of Interpersonal Relationships: Communications in Nursing
This course is designed to utilize techniques of group process to enable students to gain insight into their own behaviors and behaviors of their patients. Major emphasis is placed on communication skills and observation through the use of group discussion, role playing and

(continued)

Appendix M

UNIT 15-- audio visual aids. Principles of mental health and mental illness provide the frame work for this unit.

UNIT 16-- Community Health (Includes Nursing Care of Aged, Rehab.)

This course has as its objective-the acquaintance of the student with various health facilities in the local community; so that the student will be aware of their specific functions in order to enable her to assist in meeting specific health needs of the members of the community. Emphasis will be on geriatric nursing; aspects of rehabilitation; and on drug abuse.

UNIT 17-- Medical-Surgical Nursing

This course includes the study of common medical and surgical conditions and the clinical practice of nursing care of these patients. The principles of adapting basic nursing care and related procedures to the individual patient are practiced. Students are introduced to skills in contributing to a nursing care plan.

UNIT 18-- Nursing Care of Mothers and Newborns

Unit 18 is designed to prepare the student to understand her new role in the nursing of mothers and infants with confidence and competence. It is concerned with the prevention, promotion, and maintenance of health during the prenatal, anti-partal and neonatal period; including the complications that are related to obstetrical nursing.

UNIT 19-- Pharmacology

This course covers the elementary principles involved in the administration of medications and in weights and measures. The medications commonly used in the treatment of disease are discussed in terms of indications, contraindications, side effects and derivation. Students practice administering oral and parenteral medications.

UNIT 20-- Integration

Integration is the course designed to check final proficiency in application of knowledge, skill, and attitudes in the role of a practical nurse. Students will be in the clinical area the majority of the time. Performances in team medications, total patient care and floor treatments will be evaluated by the instructor.

UNIT 17

MODULE G

Assignment Sheet No.

UNIT TITLE: Nursing Care of Adults MODULE SUBJECT: Meeting the Nursing Needs of Patients with Conditions Related to Endocrine System

RATIONALE:

To give safe, effective nursing care to a patient with conditions related to the Endocrine System, you must have a knowledge of how the sciences can be adapted into the appropriate nursing action.

OBJECTIVES:

The practical nurse must be able to identify the physical psychological and social problems of patients with Endocrine System conditions, the practical nurse must relate her knowledge of the anatomy and physiology of the endocrine system into a plan of nursing action. Education, prevention and care will be functions of the health team.

ASSIGNMENTS:

1. Review Anatomy, The Endocrine System, Unit 4, Module H.
2. Read Total Patient Care, by Johnston, Chapter 16.
3. Study handouts and worksheets 18-G-1.
4. Review trainex Care of Diabetic Patient.

CLASSROOM EVALUATION:

1. Be able to define all vocabulary terms.
2. Be able to explain the relationship of anatomy and physiology to conditions of the endocrine system.
3. Be able to describe the condition along with the cause and symptoms of the conditions related to the endocrine system.
4. Given patient situations, be able to explain in writing the appropriate nursing action.
5. Given written questions regarding meeting the nursing needs of patients with conditions related to endocrine system, be able to name or identify the correct answers with 70% accuracy.
6. List 2 community resources and describe practical nurses role in making referrals to assist patients with special needs related to endocrine care upon discharge from hospital.

CLINICAL EVALUATION:

1. Determine from kardex and/or chart, patient diagnosis (type of patient illness)
2. Plan, implement and evaluate your own safe, effective nursing care for all assigned patients, and for all patients with whom you assist.
3. Identify specific patient needs and provide nursing measures to:
 - (a) alleviate
 1. emotional stress
 2. abnormal growth and development
 - (b) provide for
 1. comfort
 2. safety
 3. nutrition
 4. elimination
 5. teaching patient and family proper care
 6. clues of identification of signs & symptoms of hypo- and hyper-glandular functions.
4. Observe, report, record all pertinent signs, symptoms, factors related to patient
5. Report, record nursing care provided.
6. Complete a nursing care plan on a minimum of 5 assigned patients.
 - a. Include evaluation of nursing care in nursing care plans and in conferences with instructor.

ENDOCRINE SYSTEM (Continued)

CLINICAL EVALUATION (Cont.)

6. b. Include scientific principles underlying nursing action to meet patient problems.
7. Identify and be able to explain function and nursing care related to 3 categories of drugs used in treatment of endocrine conditions.
 - (a) Hormones
 1. Gonadal
 2. Ovarian
 3. Pancreas (Insulin or Hypoglycemic agents)
 4. Pituitary
 5. Suprarenal
 6. Testicular
 7. Thyroid
 8. Tissue - Building Hormones
 - (b) Vitamins
 1. Fat Soluble
 2. Water Soluble
 - (c) Minerals
 1. Non-nutrient
 2. Nutrient
8. Determine if a plan for maintenance and/or rehabilitation has been ordered. If so, describe plan and explain practical nursing responsibility.
9. Identify diagnostic tests and procedures done for the assigned patient and determine if the test results are within normal ranges.
 - a. Thyroid studies - radio iodine uptake
 - P.B.I. (protein bound iodine)
 - B.M.R.
 - b. Pancreas - glucose tolerance*
 - blood sugar
 - insulin tolerance test
 - 2 hour P.P.B.S.
 - Clinitest, Acetest*
 - 24 hour urinalysis*
10. Demonstrate nursing care of patients with therapy specifically related to endocrine system (Metabolic disorders):
 - a. clinitest, acetest, testape
 - b. insulin (determine if needed, dosage, and administer).
 - c. determine if foods given to patient are acceptable within prescribed diets.
 - d. notify dietitian if diabetic patient fails to eat.
11. Demonstrate teaching of patients and family:
 - a. regarding relationship of diet, exercise and medication for diabetics.
 - b. how to perform & read & record clinitest and acetest.
 - c. how to prepare and administer medication.

* Be able to demonstrate nursing procedures.

EVALUATION OF EMPLOYMENT PERFORMANCE
OF HOP GRADUATES

Please consider performance during period covered by this rating and show by (x) each of the aspects of performance included in the rating form. Please check if this evaluation is done after graduate has been employed:

3 months 6 months 12 months

Employee's Name _____

Employee's Job Title _____

Length of Time Employed _____

Evaluator's Name, Position _____

I. JOB KNOWLEDGE: Consider knowledge of work gained through experience, gained through experience, general education, specialized training, special sources of information.

Has a fund of knowledge beyond the requirements of the job and can apply this knowledge without being supervised or assisted.	Knows essentials and details thoroughly enough to perform without assistance.	Knows job well enough to perform with a small amount of assistance.
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	Limited understanding of job, requires considerable assistance.	

II. QUALITY OF WORK: Consider accuracy, neatness, thoroughness and dependability of results, regardless of volume.

Exceptionally neat and accurate. Practically never necessary to question thoroughness.	Seldom necessary to check work. Gives indication of competency in all assignments.	Acceptable, usually neat, occasional errors or rejections.
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
		Often unacceptable, frequent errors or rejections, frequently untidy.

III. QUANTITY OF WORK: Consider volume of work produced under routine day-to-day conditions. Disregard errors.

Output frequently above demands of job.	Satisfactory for demands of job.	Output occasionally below the requirements of the job.
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
		Production usually below the job requirements.

IV. INITIATIVE: Consider the degree to which employee applies himself to his work.

Whenever regular work completed, finds extra work.	Keeps pace with regular flow of work.	Requires occasional prodding to keep up with regular duties.
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
		Shirks work, puts it off, must be continuously prodded.

continued..

EVALUATION OF EMPLOYMENT PERFORMANCE OF HOP GRADUATES - Page 2

Name of Employee _____

V. COOPERATION/ATTITUDE: Consider ability to get along with and help others.

Usually cooperative, works well with others in the group; voluntarily helps others.

☐

Maintains satisfactory relationships; willing to help others when asked.

☐

Has difficulty working with others. Fails to carry out orders.

☐

Rejects suggestions. Has difficulty working with others.

☐

VI. PATIENT RELATIONSHIPS

Maintains good rapport with patients, skilled in and practices very good patient care.

☐

Provides adequate patient care with attention to patient needs and provides adequate assistance to the patient.

☐

Has difficulty communicating with patient. Inattention to patient comforts.

☐

Lacks skill in aiding and guiding patients.

☐

VII. DEPENDABILITY: Is punctual and can be relied on to be working when and where assigned.

Satisfactory

☐

Unsatisfactory (Please comment)

☐

VIII. APPEARANCE: The employee's uniform, grooming and personal habits are such that his appearance is appropriate for a person providing services to hospitalized people (or people needing health care services)

Satisfactory

☐

Unsatisfactory (Please comment)

ADDITIONAL COMMENTS:

Thank you for your time, cooperation in completing this form. Please return to Project HOP
P.O. Box 4040
Tucson, Arizona 85717

ABSTRACT - SPECIFIC PROCEDURES ARE DETAILED
FOR IMPLEMENTING 12 OBJECTIVES FOR A
DISTRICT-WIDE EXEMPLARY PROGRAM IN CAREER
EDUCATION AT THE ELEMENTARY AND SECONDARY
GRADE LEVELS IN THIS FIRST ANNUAL PROJECT
EVALUATION. PROGRAM GOALS INCLUDED DROPCUT

PREVENTION, BROADENING OF OCCUPATIONAL
AWARENESS AND CAREER OPPORTUNITIES FOR
DISADVANTAGED YOUTH, INSERVICE TRAINING,
COORDINATION OF EDUCATIONAL STAFF AND
AGENCIES, DEVELOPMENT OF COOPERATIVE AND WORK
EXPERIENCE PROGRAMS, AND JOB PLACEMENT.

INDIVIDUALIZED STUDY PROGRAMS WERE PROVIDED
AT A CAREER EXTENSION CENTER FOR 65
VOLUNTARILY-ENROLLED STUDENTS WHO WERE FORMER
DROPOUTS, AS WELL AS OTHER YOUTH WHO USED THE
GUIDANCE SERVICES. THE ROLE OF THE WORK-
EXPERIENCE COORDINATOR, PARENTAL SUPPORT AND

INVOLVEMENT, AND THE USE OF RESOURCE
SPEAKERS, FIELD TRIPS, AND ROLE PLAYING WERE
MAJOR EMPHASES IN THIS INTEGRATED CAREER
EDUCATION PROGRAM. DIRECTED TOWARD THE
DEVELOPMENT OF JOB SKILLS IN AN INNOVATIVE
PROGRAM RELEVANT TO STUDENT NEEDS, THIS

PROGRAM INCLUDED A THIRD-PARTY INTERIM
EVALUATION FOR EACH OBJECTIVE. CONCLUSIONS,
IMPLICATIONS, AND RECOMMENDATIONS FOR PROGRAM
IMPROVEMENT ARE PRESENTED. PROJECT AND
RESOURCE BIBLIOGRAPHIES AND OTHER RESOURCE
MATERIALS ARE INCLUDED. (AG)

SUMMARY OF THE REPORT

A. Time Period Covered: The time period covered by this report is August 1, 1971 - June 30, 1972.

B. Goals and Objectives: The goals and objectives of the original proposal were the consistent reference points for the first year's activities. They are listed on page 12 of the Orientation-Work-Study-Placement program as it was presented to the United States Commissioner of Education under the provisions of Part D of the Vocational Education amendments of 1968. They are as follows:

- (1) To broaden occupational orientation at the elementary, junior high and high school levels.
- (2) To broaden occupational aspirations and opportunities for youths, including those who have academic, socio, economic or other handicaps.
- (3) To specifically identify dropouts, pinpoint causes for dropouts, plan preventative and remedial programs and promote implementation thereof.
- (4) To identify and develop new opportunities for work experience and cooperative education in several occupational areas.
- (5) To give more practical work experience to youth at various grade levels, and to have such experience characterized by learning by doing, significant responsibility for productive service to an employer, and recognition of educational values by awarding formal credit.
- (6) To achieve a more realistic picture of job opportunities and utilize such information in training for employment.
- (7) To develop employability of students.
- (8) To develop the assumption of responsibility for placement of students at whatever level they leave the school system.
- (9) To create bridges between school and earning a living for young people who are still in school, who have left school either by graduation or dropout, or who are in post-secondary programs of vocational preparation.
- (10) To make greater use of existing school facilities, especially during the summer months.
- (11) To conduct in-service training for district and other personnel to achieve the objectives of this proposal.
- (12) To bring general and vocational educators, State Department of Education staff, teacher education staff, manpower and other agencies together in coordinated efforts to achieve the objectives of this proposal.

(13) To improve the status, scope and image of vocational-technical education.

C. Procedures Followed: In attaining the above objectives, several areas of activity superceded others this first year of operation. The staff felt that the essential priority was the infusion of career education into the district's total curriculum. However, the budget allowed for only one-half salary for someone to begin coordinating the career curriculum throughout the school district. Obviously this made for a rather slow beginning in this area. Later this coordinator resigned and for the last four months of the school year a full time consultant was hired. Two other staff members began to spend more time assisting her in gathering information and creating opportunities for dialogue with teachers, counselors and administrators in relation to the objectives set in the proposal. Several key resource people were identified in each school and with their help and input the infusion of the career concept into the school curriculum is receiving understanding and acceptance.

A building was rented and is referred to as the Career Extension Center. The career consultant had office space in this building and the various materials such as books and audio visual materials which were purchased were previewed and distributed throughout the district from the Center. These materials, along with those already existing in the district have been cataloged and the lists will be available to the various schools the first thing next fall.

Also at the Center there were offices for the director, work-experience coordinator and counselor. The rest of the building was used for approximately 65 students who worked two, later three, full time teachers on a totally individualized study program. These students had dropped out of the regular school program in the past, and on a voluntary basis enrolled at the Career Extension Center. This provided the nucleus for the second major priority, the Career Extension Center school. An extensive amount of personal and career guidance was provided--not only to those enrolled but to a number of other youth who felt a need for the kind of services we were able to provide. Every day of operation, young people dropped in either to ask to be enrolled in the school, to receive information, or seek special career or personal counseling. A number of parents called to seek help and guidance in dealing with their children who appeared completely turned off in the conventional school program.

The teachers worked almost exclusively with the enrolled Career Extension Center students. They provided individualized instruction and developed courses corresponding to those at the regular high school, but totally on the behavioral objective concept. Flow charts were kept on each student to show exactly his day to day progress. Though the students were aware that all work set up must be covered, and all objectives met, they did not object to the fact that earning credit in such a setting required considerable more work and perfection than they needed to produce for credit in previous school settings.

One of the most important aspects of the entire program was the work done by the work-experience coordinator. He helped to find meaningful on-the-job training or career exposure stations within the community for the students enrolled at the Career Extension Center, a number of other students referred to him by high school counselors, and those who just "dropped in". It was found that the businesses and various agencies in the community were very cooperative, and when the staff felt a student was ready for this kind of exposure, a position was found to most nearly fit the students interests, aptitude and academic work load.

D. Results; Accomplishments: Some of the general results of the school year were as follows:

- (1) The career consultant was able to initiate a plan of career development in at least one sixth grade class in each elementary school with the concept spreading to other classrooms.
- (2) The two junior high schools have initiated definite plans to integrate the career concept into the total school program. One school has a comprehensive self-appraisal and occupational exploration as an organized effort on the part of the counseling staff with teacher assistance. At the other junior high school there was a special in-service training for the counselors, a career club was established and a model exploratory resource center was developed in the library.
- (3) A speakers list and an approved field trip list were developed. These were consistently used by the teachers K - 12.
- (4) On the high school level a course was implemented which has allowed students to receive high school credit for supervised on-the-job occupational exposure. Career packets for teachers within each department are in the process of being developed.
- (5) An explanatory brochure was developed to explain the Orientation-Work-Study-Placement Program to the school district, the community and to be sent to other individuals outside of the community who would have a concern about career development.
- (6) Staff members have been asked to speak to about twenty service clubs and organizations.
- (7) A list of all career materials in the school district has been compiled. (Appendix D)
- (8) Through the personal, individualized method of instruction at the Career Extension Center a few students received a regular high school diploma.
- (9) Older students who had very few high school credits were assisted in their preparation for the High School Equivalency Test.
- (10) Many young people and a few adults used the Career Extension Center for personal and career guidance services.

(11) An intensive thrust was made to give as many Vocational Interest Survey tests as possible - not only at the Center, but throughout the district.

(12) Part, and full time jobs were located for over one hundred students in the school district.

(13) Excellent rapport was established with the probation officers, the workers at the Drug Clinic, Health Clinic, Hillcrest Home for Boys, a home for girls, and the Jesus People who have made an impact on many youth in the community.

(14) There has been a large increase of membership in the Fairbanks Personnel and Guidance Association due to the leadership of three staff members of the Career Extension Center.

(15) Staff members spoke to all of the student teachers at the University and later worked with some individually.

E. Evaluation: In addition to the third party evaluation report which was prepared for us by Dr. Allen Lee, and follows later in this report, our immediate concerns led us to initiate several types of evaluations of our own throughout the year. These evaluation studies are as follows:

(1) A staff evaluation report was designed and executed by our career consultant.

(2) The parents of the students attending the Career Extension Center school initiated a survey to evaluate the merits of the school itself.

(3) The students attending the Career Extension Center school were asked to evaluate their past school experiences.

(4) The district's Department of Research, Planning and Federal Programs is helping the Career Extension Center staff with a study of high school drop-outs not attending the Center. The study includes the students' evaluation of their past school experiences and the curriculum offered.

(5) A research assistant working through the State Human Development Resource Center is using an instrument developed by a staff member of the Career Extension Center, to survey the businesses in the community. She is doing an occupational survey to determine manpower and training needs.

(6) The teachers at the Career Extension Center set up all courses on behavioral objective basis. This produces a situation where daily measurable evaluations must be made.

The results, or at least the latest partial results of these on going evaluations, are presented later in this report.

F. Conclusions and Recommendations:

- (1) The career consultant staff should be increased.
- (2) The bibliography materials in the school district should be categorized into explanatory form for greater usability.
- (3) More intermediate career development materials are needed.
- (4) The audio-visual materials prepared by students of local businesses and community resources is a very successful program. Much more needs to be done in this area.
- (5) The integration of the career materials into the present school program would be much more successful if the total school curriculum would be analyzed for developmental consistency.
- (6) An on-going career profile for individual students should begin in the intermediate grades.
- (7) In-service training and workshops for the staff must be an on going priority.
- (8) Funds for on-the-job training stations would increase the work exposure opportunities for students.
- (9) More flexibility is needed in scheduling in order to tailor-make a suitable program for students, especially the potential dropout.
- (10) Night school and innovative summer programs could create greater student interest and participation.
- (11) There should be more effort toward cooperation and communication between the University of Alaska staff and the public school district.
- (12) The present survey of occupational and training needs in the Fairbanks area should be continued.
- (13) Provision should be made for transporting students to and from job training stations.
- (14) Consistent, continued research should be carried out to find causes and remedies for school dropouts.
- (15) The present school counselors should be freed from clerical duties in order to perform the student personnel services for which they were trained and hired.

BODY OF THE REPORT

- A. Problem area to which the project was directed: Simply stated the problem area is the long established fact that most students leave our school system without any skills that will be useful or salable to an

employer. This fact is as true for the high school graduate as for the drop out. This is not just a concern at the secondary level, but at the elementary educational system as well.

In 1968, a follow up study of Lathrop High School graduates and dropouts, grades nine through twelve, was conducted under a grant from the United States Office of Education, Department of Health, Education and Welfare [School Curriculum: A Follow-up Study of Lathrop High School Graduates and Dropouts by Smail, Mills, Koponen]. It was found that 13.89% of the total enrollment over a period of the previous six years had physically dropped out of high school. This year long study, which included extensive interviews, recommended very strongly that the course content must show a relationship to every day living in order to keep the potential drop-out interested. The students wanted a more relevant, hands on type of experience with some obvious immediate rewards. In February, 1972, a follow up was done on this same study and the drop out rate for the 1971-72 school year of the students grades 10-12 were being projected at 18.02% - a 4.13% increase. These latest statistics are provided by the Department of Research, Planning and Federal Programs of the Fairbanks North Star Borough School District. At the same time it was found that interest in the vocational courses is waning, only 7% of the student body is presently enrolled in some vocational courses. The 1969 graduating class had about 19% of their students who took vocational training sometime during their high school career.

Although approximately 50% of the high school graduates enroll in college the following fall, the registrars office at the university, where most of our students attend, reports that 40% of the freshman class either drops out during the school year or fails to report back the next fall.

According to a study by three Lathrop High School counselors in the 1969-70 school term, it was found that 8% of the students who were still enrolled at the end of the school year had failed all academic subjects even though standardized test scores usually showed these students to have average ability. In 1970, one of the school counselors conducted a survey of the senior class. One of the questions was, "What kind of subjects do you feel Lathrop should offer?" 19% felt they would have liked more vocational training while another 30% stated they would like more "meaningful", "down to earth", "nonbook" type subjects which in translation could mean they would like to have had courses more relevant to every day life.

In order to prepare for the writing of the Orientation-Work-Study-Placement proposal a great amount of thought, preparation, and research was conducted. The object was to introduce into this school district a more relevant, career oriented program. Two major thrusts were chosen: (1) initiate inovative methods in career education into the total district curriculum. (2) Provide an exemplary high school, in this case made up of former school dropouts, in which individual academic work correlates with on-the-job training. Visits were made to the S.A.V.E. program in Anchorage which worked with potential dropouts identified by school counselors. This program uses the 1/2 day academic and 1/2 day

work emphasis. A visit was also made to Project Interchange in Seattle which used similar methods to the S.A.V.E. program. A contractual program at Ballard High School in Seattle was carefully noted. Here students worked with their teachers in developing a course of study and then signed a contract which describes the work they will do to receive credit. Whenever needed, the teachers would be available to help.

Two resource books were used to explain causes for students dropping out. These books are:

Profile of the School Dropout

Edited by Daniel Schreiber
Random House, New York, 1967

The Dropout

by Lucins F. Cervantes
Ann Arbor University of Michigan Press, 1966

From these books, as well as from one of our own studies listed later, we can see there are other dimensions in addition to a meaningful curriculum that must be considered when trying to help the student. A myriad of personal, emotional and social needs require service which can best be provided by well trained, understanding counselors.

Since this beginning of the project, a number of our staff members have had the opportunity to visit other programs in Portland, Juneau, Seattle, Anchorage and Kenai.

The Smail, Mills, Koponen report, mentioned above, however, has had a strong impact upon the direction our staff has chosen to take since it was the most extensive study of this nature ever done in this district concerned with our own unique transient population plus a large percentage of native students. With elaborate detail and intensive seeking out of past students and their opinions, the researchers came up with twenty-five specific recommendations that we consider vital to our program commitment. From these recommendations, plus an overview of national concerns, we feel confident that our exemplary program is a beginning to meet the needs of many of our youth.

B. Goals and objectives of the project: In order to be concrete and measureable, broad goals and objectives of our proposal have been broken down into specific behavioral objectives that appeared feasible for the first year.

Objective 1: To broaden occupational orientation at the elementary, junior high and high school level.

Objective 2: To broaden occupational aspirations and opportunities for youths including those who have academic, socio-economic or other handicaps.

(These two objectives have been combined due to overlap in specific objectives.)

(a) Through building principals, a career education resource person will be selected in each school and those persons will

receive initial and on-going in-service training related to the goals of the program and career education activities.

(b) The career consultant will visit each school at least once per week to develop programs, deliver materials and generally maintain a liaison with resource personnel.

(c) Arrange field trips and guest speakers as demanded by building resource personnel.

(d) Compile an annotated index of related books and audio-visual material in the school district and make available to classroom teachers.

(e) Compile a list of career field trips and speakers to cover all career clusters and make available to classroom teachers.

(f) Order and evaluate all career education programs that become available.

(g) Meet with all school librarians to implement the expansion of career materials in school libraries and to develop a career center in each library.

(h) Order all appropriate free materials listed in the Career Index published by Chronicle Guidance.

(i) Order career related materials (poster series, books, films, career kits and tests) and distribute within the schools. (Approximately \$2,000)

(j) Keep a log of activities and materials distributed.

(k) Meet with all junior high and high school counselors at least once per month to discuss activities relating to career education.

(l) Meet with high school department heads at least two times during the year to discuss career education activities.

(m) Assist in establishing a summer workshop in career education for teachers within the district.

(n) Establish a 1/2 credit course in career inquiry for Career Extension Center students with a minimum of twenty students successfully completing the course requirements. (Later it was decided that all students would be taking this course).

(o) Establish a one to three credit course at the high school level called "Careers Exposure" which will allow at least twenty students to utilize community resources for career orientation on an "out of school" basis.

(p) Meet with the superintendent, secondary school coordinator and elementary school coordinator at least six times during the year to review career development program.

(q) Assist junior high counselors in establishing and maintaining a nine week occupational unit in their respective schools.

(r) Provide all high school teachers with career related material compiled individually for their specific subject matter areas.

(s) Provide each department at the secondary level with an S.R.A. occupational kit.

(t) Develop a comprehensive testing program (including interest, aptitude, ability, achievement and personality) and career profile chart for Career Extension Center students and introduce the results to secondary school counselors.

(u) Initiate a career club in each of the junior high schools that will include at least twenty students meeting weekly.

(v) Meet with University of Alaska personnel at least two times throughout the year to provide career education input into the university systems teacher training program.

OBJECTIVE 3: To specifically identify dropouts, pinpoint causes for dropouts, plan preventative and remedial programs and promote implementation thereof.

(a) The Fairbanks Department of Research, Planning and Federal Programs will continue studying and researching the dropout problem using the same format used in the Smail study [School Curriculum: A Follow up on Lathrop High School Drop Outs.]

(b) The staff at the Career Extension Center will develop an interview sheet that covers all aspects of the student's past attitudes toward school.

(c) A committee will be established to study the research materials developed which will help pinpoint potential dropouts and devise methods for remedial work as well as more hands on career related activities for the elementary and junior high school students.

(d) High school counselors will interview and gather data on every student that leaves school during the school year. This information will be compiled each spring and presented to the school board with recommended curricular modifications.

(e) A research aid will be assigned to assist Career Extension Center staff in gathering and compiling data necessary in determining causative factors regarding recent dropouts.

OBJECTIVE 4: To identify and develop new opportunities for work experience and cooperative education in several occupational areas.

(a) The director and/or other staff members will speak to fifteen or more different organizations and clubs to explain the Orientation-Work-Study Program and solicit a response in terms of jobs, questions, and public relations.

(b) Evaluative tools, such as value and interest surveys as well as personality inventories and aptitude tests, will be made a part of every student's profile for the purpose of pointing out career areas the student has not considered before. These services are to be offered to all secondary students as well.

(c) The work-experience coordinator will maintain the necessary contact to develop cooperative training and exposure settings for high school students with the following entities and others as deemed appropriate:

Adult Vocational Education
University of Alaska
Apprenticeship Outreach Program
State, Federal and local agencies
Office of Vocational Rehabilitation
Hospital Nurses Aid Program

OBJECTIVE 5: To give more practical work experience to youth at the various grade levels, and to have such experience characterized by learning by doing, significant responsibility for productive work to an employer and recognition of educational values by awarding credit.

(a) Provide part-time employment for all students within the Work-Study-Orientation Placement Program that are working toward a high school diploma or equivalency test.

(b) Periodically modify employment of students enrolled in the Career Extension Center as necessary to more completely meet individual vocational needs as measured by:

- (1) past and present employment success
- (2) interest and aptitude testing
- (3) Educational aspirations

(c) Conduct a meeting of all Career Extension Center staff members each week to discuss educational and occupational growth of each student within the exemplary program.

(d) Require each student within the Career Extension Center to complete a one-half credit course termed Career Inquiry which will focus on job attitude as well as the mechanical aspects of successful employment.

(e) High school elective credit will be awarded to all students fulfilling work-experience requirements on the basis of Alaska State Vocational Department standards.

OBJECTIVE 6: To achieve a more realistic picture of job opportunities and to utilize such information in training for employment.

(a) Make contact with all employing businesses and agencies in the Fairbanks area in an attempt to seek student employment and survey community job needs.

(b) Maintain weekly contact with staff members of the Alaska State Employment Office.

(c) Attend meetings of the Fairbanks Ancillary Manpower Board.

(d) Utilize personnel from the school district's research and planning department in completing a community survey regarding local employment picture and training target population.

(e) Maintain constant communication with all youth employment programs:

High School Co-op Programs
Neighborhood Youth Corps
Youth Opportunity Corps
Kawainis Youth Employment Program
Native Center Employment Program
N.A.A.C.P. Employment Service
Manpower Development Program

OBJECTIVE 7: To develop employability of students.

(a) Every student at the Career Extension Center will complete a one-half credit course, "Career Inquiry".

(b) Meet with parents of Career Extension Center students on a monthly basis to discuss the progress students have made and to share ideas on "generation gap" communications. This is to help bring about behavior changes which would transfer to job and school activities.

(c) Each student at the Career Extension Center school will increase his reading by one grade level by the end of the school year.

(d) A curriculum will be devised for each student which will meet the district's graduation requirements as well as relate the subjects to the career goals the students might have. Every course plan will be written in behavioral objective format.

(e) The teachers will help those students preparing for the G.E.D. to pass the test with as high scores as possible.

(f) The counselor will make personal contact with newly enrolled students at the Career Extension Center school. Those students with special problems will be seen on a regular schedule.

(g) All students who have not developed a successful employment record will be placed in a controlled career exposure setting until satisfactory work habits are developed.

OBJECTIVE 8: To develop assumption of responsibility for placement of students at whatever level they leave the school system.

- (a) A continuing placement service will be available to past graduates of the Career Extension Center school as well as testing and career counseling services.
- (b) All students unable to complete high school graduation requirements or equivalency testing will be placed in appropriate trade school settings or employment.

OBJECTIVE 9: To create bridges between school and earning a living for young people still in school, or who have left school either by graduation or dropout, or who are in post-secondary programs of vocational preparation.

(a) Meet with University of Alaska personnel at least two times throughout the year to provide career education input into the University system's teacher training program.

(b) The director and/or other staff members will speak to fifteen or more different organizations and clubs to explain the Orientation-Work-Study Program and solicit a response in terms of jobs, questions, and public relations.

(c) The work-experience coordinator will maintain the necessary contact to develop cooperative training and exposure settings for high school students with the following entities and others as deemed appropriate:

Adult Vocational Education
University of Alaska
Apprenticeship Outreach Program
State, Federal and local agencies
Office of Vocational Rehabilitation
Hospital Nurses Aid Program

(d) Make contact with all employing businesses and agencies in the Fairbanks area in an attempt to seek student employment and survey community job needs.

(e) Maintain weekly contact with staff members of the Alaska State Employment Office.

(f) Attend meetings of the Fairbanks Ancillary Manpower Board.

(g) Utilize personnel from the school district's research and planning department in completing a survey regarding local employment picture and training target population.

(h) A Career Extension Center staff member will attend or request meeting minutes of all regular meetings of the following agencies or committees:

Fairbanks Interagency Council

Fairbanks Ancillary Manpower Board
Fairbanks Counselors Association
Fairbanks Vocational Education Advisory Board
Fairbanks Chamber of Commerce

(i) Director and staff from all agencies will be invited to visit the Career Extension Center.

(j) A minimum of one meeting each month will be held with the districts four work-experience coordinators to insure synchronization of work experiences and opportunities.

OBJECTIVE 10: To make greater use of existing school facilities, especially during the summer months.

(a) The Career Extension Center school will be open for at least one month of the normal school summer vacation.

(b) The Career Extension Center school will be open for at least four evenings per week throughout the school year.

(c) At least one third of the regular Career Extension Center students will spend one period or more in academic or vocational courses within the high school or vocational education programs during the school year.

OBJECTIVE 11: To conduct in-service training for district and other personnel to achieve the objectives of this proposal.

(a) A career education resource person from each school in the district will attend at least one career education workshop during the school year.

(b) A career education summer workshop will be made available for interested teachers.

(c) The career consultant will meet with career education resource personnel in each school at least once each week.

OBJECTIVE 12: To bring educators, vocational and general, State Department of Education staff, teacher education staff, manpower and other agencies together in coordinated efforts to achieve the objectives of this proposal.

(a) A Career Extension Center staff member will attend or request meeting minutes of all regular meetings of the following agencies or committees:

Fairbanks Interagency Council
Fairbanks Ancillary Manpower Board
Fairbanks Counselors Association
Fairbanks Vocational Education Advisory Board
Fairbanks Chamber of Commerce

(b) Director and staff from all agencies will be invited to visit the Career Extension Center.

(c) A minimum of one meeting each month will be held with the districts four work-experience coordinators to insure synchronization of work experiences and opportunities.

(d) The director and/or other staff members will speak to fifteen or more different organizations and clubs to explain the Orientation-Work-Study-Placement Program and solicit a response in terms of jobs, questions and public relations.

(e) Career Extension Center staff members will present the Orientation-Work-Study-Placement Program to the district school board at least once during the school year.

C. Description of the general project design and the procedures followed, including information on the student population, instructional staff and on the methods, materials, instruments and techniques used.

Underlying the entire concept of the Orientation-Work-Study-Placement program is the unified philosophy of the present staff that is engaged with the responsibility and privilege of serving in it. One could almost state it as a creed: We believe that a useful, meaningful education is the right of every young person in our community and it is the task of the educators to provide as many opportunities and learning alternatives as is possible. Since learning does not cease as the student leaves the school building, he must be aware of and have access to the varied and important information that the community has to offer.

It is understood that basic to learning is the need for the students (and our co-workers) to be created with trust, respect and dignity.

Each student is to be given the opportunity to find meaning and direction in his search for identity. This is done by helping him develop the knowledge and skills needed to make sense out of his experiences -- today and in the future.

Youth needs a place in society. He should feel needed and wanted, and that he is pulling his weight as he becomes a responsible member of his community.

In this educational plan, much of the responsibility for learning, for seeking out, for probing is put on the student himself. The staff sets the tone, creates as varied amount of experiences as possible, and assists and guides.

For the reader to understand the Fairbanks North Star Borough School District - the various schools are listed below:

Lathrop High School
Main Junior High School

Ryan Junior High School
 Adler Elementary
 Barnette Elementary
 Birch Elementary (Special Education)
 Denali Elementary
 Hunter Elementary
 Joy Elementary
 Nordale Elementary
 North Pole Elementary
 Salcha Elementary ——— Smaller schools in out-
 Two Rivers Elementary ——— lying areas of the Borough
 University Park Elementary

The career development coordinator was hired September 2nd on a half-time basis. She began her work by looking into all the career materials available in the school district - the Curriculum Service Center, school libraries, teachers, classrooms, counselors offices and the Fairbanks North Star Borough Library. All of these materials were later cataloged. She ordered free materials, career development guides and programs that have been used in other communities and states. She and the director met several times with the junior and senior high counselors to explain the total function of the Orientation-Work-Study-Placement Program and ways in which the Career Extension Center could assist them disseminate materials to the teachers and their counselees. They also spoke to the entire faculty of the high school and one of the junior high schools. It was found, however, that communication had to be an on-going, intensified effort for the program was so new and much groundwork needed to be done if the career curriculum and career guidance was to have meaning and direction. Later the work-experience coordinator spent a considerable amount of time on the secondary level. The approach used will be described more fully below.

The career consultant conferred regularly with the elementary curriculum coordinator and assistant superintendent as to the opportune time to talk to the elementary school principals about the concept of integrating the career development program into the regular classroom experiences. This presentation took place in December, 1971, when the Orientation-Work-Study-Placement Program objectives were presented verbally and in writing, and the various types of media available in the district were displayed. An administrative decision was also made that in the elementary schools the principals should choose one key person, a sixth grade teacher, to be a contact through whom the career program concept would be introduced. The Philadelphia Plan, published by the school district of Philadelphia, was used as a basis from which to work. (appendix C8-C11). Some of the key people adapted very quickly and established very interesting ideas of their own. They were consistently requesting more materials and help with field trips, speakers or "Career Projects". Their enthusiasm spread to other teachers in the buildings, and it was an inspiring experience to keep up with them.

In a few schools the coordinator found she needed to visit and work much harder to keep the spark alive and the program moving along.

On January 7, 1972, the part-time consultant resigned and on January 25, 1972, a full time consultant took over. Basically she worked along the same lines as the previous coordinator. The Philadelphia Plan was supplemented with new and varied materials. A speakers list and a field trip list were devised and the cataloging was completed. (appendices B1-B3) She was able to work long enough to find a great need for coordination which will be a priority for next year. As the ideas began to catch on - it was found that the many activities were beginning to get in each other's way (example: too many field trips to the same location). Though the Orientation-Work-Study-Placement Program staff was pleased to see the enthusiasm grow, it then had to be coordinated very carefully so each student would have a growing experience through the school years - rather than one of repetition or deletions. These needs led to the development of an overall career education plan which requires exploration in depth this coming year.

Through struggling to find direction consistent with district's normal mode of operation, integrated elements of career education began to emerge as part of the general curriculum. It was found that the first five or six years of education differs little from former efforts except that simultaneously with general learning, the student explores the world of work through a wide lateral study of occupational clusters. In the middle grades, career education becomes more individualized and the student more intensely explores the occupations within the clusters he has shown the greatest interest. Through the tenth and eleventh grades the student will then develop basic entry skills that will meet his needs should the option of leaving school prior to completion of the twelfth grade be exercised. Should the student graduate from high school, employment or entrance to a post-secondary institution will be the appropriate alternative according to need, aptitudes and interests. Skilled career consultants and counselors are a key aspect of this concept. The student will receive extensive assistance in developing his particular interests and abilities and tying these to potential careers.

The above described program will be a functioning part of the district's curriculum in the insuing school year. Specific activities and recommendations for implementation are to be found later in the text.

On the junior high level career education activities were introduced via several different vehicles. Initially the counselors at the two junior high schools received in-service training both formally and informally regarding career education techniques for counseling and classroom activities. From this, a counselor in each school was designated to act as a resource or contact person. In one school a structured nine week self-assessment and occupational exploration course was set up geared to reach three hundred seventh and eighth graders. The Self Appraisal and Assessment Structure (astrow) was the assessment tool and the SRA occupation kit was used as a springboard for exploration to be followed up with research within the students regular classes. A career education resource center was set up in both junior high schools with the assistance of the librarians. Math, business, speech and science courses were all introduced to career education through integrated activities designed by the career consultant and implemented by

the respective classroom teachers. A career club was established in each school which provided students with extensive career exposure as well as providing an excellent sounding board for new ideas.

The Ohio Interest Inventory test was introduced to the counselors and administered to approximately seventy-five students who had specifically requested information about themselves. This tool proved effective and will be used extensively next year.

The concept of career speakers and field trips was readily developed in the junior high schools and utilized heavily the second semester.

In the high school, the goal was to modify the curriculum so that career exposure cut all the way across the student's educational experience. Through the counselors and department heads, a plan was designed to provide each teacher in the high school with in-service training in methods relating the world of work to each subject area taught in the school. This entailed departmental material designed for each of the ten departments represented. This was in turn broken down into individual teacher packets relating directly to the specific subject areas for which each teacher was responsible. Each department would, therefore, act as a departmental resource area providing supportive material for the teachers it serves. Individualized classroom projects, speaker lists, field trip lists, career exploration kits and student developed printed and audiovisual material would be included within the packets. This project has had a good beginning, but needs to be completed next year.

Another area of high school career development effort has been in supplying materials for a career center in the school's proposed student lounge. Aside from a large amount of general career information such as brochures, kits, posters, etc., a variety of career films were shown during the course of the year as were many sound film loop series introduced.

As in the other schools, field trips and speaker assistance was provided at teacher request by the career consultant from the Work-Study-Oriented program.

Career Education input was also applied in the district's one high school as a supplement to the curriculum described above in an effort to integrate the career concept into the existing field study. This took the form of a course termed "Careers Exposure". (appendix C15 - C17)

Basically, a student enrolled in Careers Exposure will spend two to three hours in structured activities in a business or agency within the community. Students will receive elective high school credit for this on the basis of one-half (1/2) elective credit per 100 hours at the exposure station. A maximum of three credits can be earned in Careers Exposure in the high school educational program. Since the major objective of this activity is to provide intensive exposure to a variety of careers, the length of time at any one station need not be extensive. The time

at any single exposure station will vary according to circumstances but will not exceed 300 hours. Upon reaching that limit, the student will be placed in another exposure station, fed back into the regular curriculum or the existing station will be converted to a training position subject to a new contract.

Students in grades 9-12 will be eligible for Careers Exposure. The selection or determination of students most applicable for these activities will be the responsibility of the counselors. Counselors, through their contact with the students, will also be instrumental in determining the particular career exposure most beneficial in each case. The actual placement in business or agency and the periodic follow-up necessary will be the duty of the career consultant assigned to that school. The consultant will also be responsible for the necessary paperwork and arrangement of the contractual agreement between school, student and employer. (appendix B8) The contract will contain general stipulations common to all students taking Careers Exposure as well as a list of the behavioral objectives specifically applicable to each placement. These objectives will be tailored according to student needs and the opportunities available in the exposure station.

The career consultant devised a questionnaire, presented at a principals meeting, to be distributed to all of the teachers. (appendix B16) Though the small number of responses was a disappointment we were able to learn a few facts.

The career orientation activities, units and techniques most often used are listed below in order of frequency:

- Community Helpers
- Discussion of different careers
- Films of various occupations
- Family Unit Study
- Field trips
- Illustrations, Stories
- Art in Action
- Discussion of school personnel jobs, interdependence
- Model City Planning
- Newspaper Contact
- Role Playing of Occupations

The career orientation activities, units or techniques listed most often as desirable for next year were actual exposure to unskilled possible future jobs. This was especially important to the special education teachers.

During the school year the Orientation-Work-Study-Placement Program travel budget allowed for several trips to other programs and conferences. These proved invaluable experiences as we were able to view existing programs and learn from them.

In August, 1971, four staff members took part in the Alaska Vocational Association Conference.

Thirteen district staff members attended a one day Career Orientation Conference in Anchorage. Three staff members took part in the career curriculum section at the state teachers' conference.

One teacher of the Career Extension Center school visited a similar school established in Juneau, and another teacher visited the one on Anchorage.

The director had the opportunity to attend the American Vocational Association in Portland as well as visit career oriented programs in the Portland and Seattle areas.

The director of elementary curriculum spent several days in Seattle studying the career program developed there, and the assistant superintendent attended a conference for administrators in the area of the career curriculum as it is being developed nationwide.

The Career Extension Center School: When the school term began we felt an urgency to get the school for dropouts started as fast as possible. Students who had dropped out of school the year before and those who had failed all academic subjects, were sent a note of invitation to discuss their continuing their education under the guidance of the staff at the Center. No one was forced or coerced in any way to attend the school. The program was explained and they decided whether they wished to enroll. Though we felt fifty students should be our limit, we often had over sixty-five on our rolls and a long waiting list.

Some students desired to work for regular high school credits while others felt because they were so far behind and getting toward their eighteenth birthday, they would do best by studying for their High School Equivalency test.

All school work was completely individualized. The general procedure was for the student to see the director for an interview. If the student was accepted - he completed an enrollment and was then introduced to the counselor. The counselor spent some time with the student, on a "get acquainted" basis, and then introduced the student to the work-experience coordinator. The work-experience coordinator discussed the student's job status and his past experiences and aspirations. At this point the student was introduced to the teachers who started him on a Career Inquiry course. (appendix C1-C2) While the student was working on this, the staff had the opportunity to obtain and review the student's transcripts and past test scores. It also gave them an opportunity to observe the student's work habits and ability to work on a very structured course in a non-structured setting. The entire concept of learning at the center is that each student is totally responsible for his own time schedule and attendance. However, each course outline is set up with a definite list of behavioral objectives which must be met before any credit can be given. Each objective is worth a determined number of units and an individual flow chart is kept in each student's folder which allows him to see his progress and the amount of work needed to complete his work.

The counselor worked on a regular basis with the students. He gave at

least one, and usually two vocational interest inventories to every student. This experience is, in a sense, a structured counseling situation where the student's interests, needs and abilities are discussed. The interest inventories furnished the student with a profile that for many brought to focus some ideas that in the past may have been hazy or non-existent. They were helpful to the teachers who utilized this information for planning individualized courses of study in line with these interests.

These interest inventories were especially helpful to the work-experience coordinator. Through interpretation of the test results with the student and counselor, past work experience, abilities and interests were tied together so that the most meaningful exposure or training situation could be applied to each individual. The counselor and work-experience coordinator worked very closely in attempting to make on-the-job experience relate to academic and social growth.

This year three different interest inventories were used. They included the Strong Vocational Interest Blank, The Kuder Personal Preference - Vocational, and the Ohio Vocational Interest Survey.

To date no aptitude testing has been done at the Career Extension Center school. Many have attended other schools within the district where the Differential Aptitude test is given, generally in the ninth or tenth grades. When necessary students were referred to the State Manpower Center for GATB testing.

If it seemed necessary, an Individual Otis Quick Scoring Mental Ability test was administered. When indicated for diagnosis of particular problem areas, a Weschler individual intelligence test was administered.

The Wide Range Achievement test (WRAT) was used for some students as it yields percentile scores and grade level placement in reading, math, and spelling. Toward the end of the year we became acquainted with the Peabody Individual Achievement Test (PIAT) which is considerably more comprehensive and will probably replace the WRAT next year.

Personality testing has not been routinely given this year. Next year the 16PF will be a part of the standard battery given.

All of this testing is to help the student understand himself better in relation to career objectives and goals, as well as to give the staff the information necessary to help the student grow in self-understanding. However, the testing is done on a voluntary basis.

An individual profile sheet developed by our counselor quickly shows the entire testing results that have been accumulated for the student. (appendix B14)

After extensive counseling, it was determined whether the student was ready for a specific training station or whether a variety of occupational exposure was necessary. If training in a specific area was in order, the work-experience coordinator would make the placement in a local business or agency on a half-time basis. In cases where an exposure setting was

required, a business or industry was chosen that best represented the occupational cluster or clusters most appropriate for the student and placement would be made on the basis of exposing the student to all relevant careers within that facility. (appendix B9-B10) An emphasis was placed upon periodically modifying both training and exposure settings when a student's needs changed or a more appropriate setting appeared.

Credit was awarded on the basis of Alaska State Vocational Department Standards of half-credit per one hundred hours of training or exposure with a maximum of one and a half credit each semester. (appendix B6) Students were under a contracted agreement to receive credit for work experience. Training positions required a general contract. (appendix B7)

While the exposure station agreements were individualized to the extent of developing specific behavioral objectives for each situation. (appendix B8)

A significant proportion of the work-experience coordinator's time was spent in meeting with individuals, agencies, and groups within the area in efforts designed to gather support for the program and to tap community resources for training stations. Close contact was also maintained with the school district's three work-experience coordinators who operated out of the regular high school.

The work-experience coordinator also provided a limited employment service for Lathrop High School students (upon recommendation of the counselor) when part-time employment appeared necessary to supplement their curriculum. Students normally fell into two categories. Those who experienced a great deal of trouble in academic work and were failing and those exceptional students who received all they could from a particular phase of the high school curriculum and would most benefit from actual work experience. This service led to the development of a Careers Exposure course that was implemented into the district's high school curriculum late in the 1971-72 academic year. That action necessitated in-service training for high school and senior high counselors and assistance in obtaining the exposure stations for the students that utilized careers exposure. (appendix C15 - C16)

One additional function of the work-experience coordinator requiring a significant amount of time was gathering survey data of employment and training needs in the Fairbanks area. The federally funded P.E.P. program provided a part-time research assistant to aid in this effort. (appendix B15)

Several additional peripheral areas touched upon by the work-experience coordinator will be evidenced in the results and conclusions portions of this report.

Through the school year, the Career Extension Center school enrolled approximately 128 students. The breakdown of these students at the end of the year is as follows:

- 64 remained on our active roll list
- 29 took the G.E.D. test and passed it
- 2 are in the process of taking the G.E.D. test. They each have one part to complete
- 4 graduated as regular high school students
- 5 quit to work full time
- 1 married, expecting a child
- 3 transferred to Lathrop High School second semester, (one graduated this spring)
- 1 took G.E.D. test several times but could not pass it. She then took a job full time
- 2 ran away
- 1 left town because his mother felt police harassed him too much
- 1 unknown
- 4 transferred to schools in the states
- 1 has been in hospital three times, will try to take G.E.D. test when feeling better
- 1 drug addict, transferred to Odyssey House in New York
- 1 in prison
- 1 in the navy
- 7 disinterested in any program we were able to suggest or devise

Follow up on the twenty-nine students who passed the G.E.D. test show the following.

- 3 traveling
- 13 working full time
- 4 military
- 1 University of Alaska
- 3 apprenticeships
- 2 part-time work, part-time University of Alaska
- 1 remaining in school to work on credits
- 2 not working or engaged in any activities

Eleven one semester English courses, six social studies and one physical education (swimming) were developed on the concept of behavioral objectives. In this report we are including the Career Inquiry Course which was totally unique to the Career Extension Center school. Its general theme, outline and list of behavioral objectives will show the general format of each course offered. (appendix C1-C2)

The students who enrolled were asked to fill out a questionnaire about themselves. (appendix B17) From the questionnaire we learned the following facts:

- 58% live with their natural parents
- 8% live with foster parents
- 9% live independent of adult supervision or married
- 15% live with one parent and sometimes with a step-parent

When those who do not live at home were asked why they left, the most frequent answer was, "too much hassling" and the second reason given was that the parents were getting a divorce. Some of the other questions were:

- (1) Is this your father's first marriage? 65% answered yes
- (2) Is this your mother's first marriage? 52% answered yes
- (3) Who is the most influential person in your life? The most frequent answer was mother, especially for the boys. The second most frequent answer was father.
- (4) Do you own a car? 28% answered yes
- (5) Have you ever run away from home? 78% answered yes
- (6) In ten years what do you hope to be doing? 36% indicated employment. 64% indicated something other than employment.
- (7) Have you ever been arrested? 45% answered yes
- (8) In what grade, or what age did you begin to lose interest in school? Grades 7 - 10 = 80% Grades 1 - 6 = 20%
- (9) Was there any particular thing that caused you to dislike school? The answers given below are listed in the order of frequency checked by the students. Students could check more than one.
 - (1) Too boring
 - (2) Skipped too often
 - (3) & (4) Didn't like the teachers - didn't like the rules.
 - (5) Frustrated with school in general.
 - (6) Frustrations and problems at home
 - (7) Not learning anything
 - (8) Just a bad feeling
 - (9) Needed to work for money
 - (10) Teachers too far ahead and moving too fast.
 - (11) Felt "out of place"
 - (12)&(13) Too hard - can't read very well
 - (14) Pregnant
 - (15)&(16) Married - felt "dumb"

In a questionnaire prepared and carried out by the parents of the students at the Career Extension Center school (appendix B11-13) it was found that the enthusiasm of the parents was even greater than the staff imagined. From this verbal encouragement, and sometimes volunteer help with calling and preparing for meetings, the staff felt very confident that some meaningful things must be happening in terms of parent-child relationships as a result of the genuine concern and long hours of preparation on their part. The availability of the staff four evenings a week to the students who worked during the day was very much appreciated also.

D. Results and Accomplishments of the Project:

- (1) During the last four months of school the career consultant initiated the Philadelphia Plan, Room to Grow program in at least one sixth grade class in each of the elementary schools. (appendix C8-11) The teachers of these classes have been considered our resource people in their particular schools. Through this contact many other classes have become interested in integrating career information into the existing curriculum. They have done this through the use of discussions, field trips, and speakers from the community. (Lists: appendix B1-3) Community resource people were reinforced with a certificate to indicate participation in career education. (appendix B-5)

Supplementary material was injected into the Philadelphia Plan to assist in integrating it into all curriculum areas within the classroom and often requested by teachers other than resource personnel. These consisted of units, career games, and films. (appendix C12-14)

(2) In two junior high schools, Main and Ryan, different avenues were followed due to varying approaches of administrators and counseling departments. Main Junior High, at the onset of the school year, began a comprehensive program of student self-appraisal and occupational exploration as an organized, programmed effort. This provided the impetus for a career development thrust geared to involve all student and staff members within that school. With this commitment to career education and the well developed expertise of the counselors, Career Extension Center personnel did little more than provide materials and utilize their staff and knowledge for in-service training.

Efforts at Ryan Junior High were limited to in-service training for counselors, development of a model career exploratory resource center, establishment of a career club and field trips and speaker resources for classroom teachers.

The Ohio Interest Inventory was given to several classes at the junior high level. This proved to be a valuable classroom tool for initiating interest in study of career units.

Two speech classes at Ryan Junior High took one of the Vocational Interest Surveys to determine a career cluster. Each student did research in his specific clusters and produced a taped speech consisting of the information he learned through readings and interviews. These tapes were then shared with elementary students.

(3) At Lathrop High School a variety of activities were introduced designed to implement career education. Lack of time coupled with a low level of enthusiasm shown by administrators and counselors at the onset hampered these efforts somewhat, but major accomplishments did occur as follows: (a) development and implementation of a course offering which allows students to receive high school credit for supervised on-the-job occupational exposures; (appendix B8, C15-17) (b) the development of departmentalized career packets to provide teachers with information and techniques particular to their specific fields; (c) introduction of a parent-student career exchange program; (d) increased support and enthusiasm from high school staff including principals, counselors and teachers.

Several teachers at Lathrop asked members of our staff to give their classes some of the Interest Inventory surveys. Later the results were explained to the students. This encouraged the students to seek more career information.

A pilot program was instituted in Career Education through the mathematics department to allow students to visit classmates parents at their place of work to see how math was utilized on a day-to-day basis. (appendix C3-C7)

(4) A brochure was developed to explain the over-all program to the community. These were mailed to all other districts requesting information mailed to all other districts requesting information about our program, to all members of the staff of the Alaska Department of Education, and to the State Vocational advisory board members. (appendix B4)

(5) Staff members spoke to approximately twenty service clubs and organizations to describe the work and to ask for assistance in creating stronger bridges between the school and community which would benefit the youth.

(6) A list of all career materials in the school district have been compiled. (appendix D) In addition to the existing career materials several thousand dollars worth of new materials were purchased for the ten schools and introduced to the teachers.

(7) Community cooperation for the Orientation-Work-Study-Placement Program was very encouraging. Often employers would call the Center when they had a position to fill.

(8) Four students who had dropped out of high school before finishing their senior year received regular high school diplomas through their work at the Career Extension Center.

(9) Twenty-nine students were helped to study for the High School Equivalency test and passed. Of these thirteen are employed full time, three are in special apprenticeship programs, four are in the military service, and three are attending the University of Alaska, at least part time.

(10) Approximately three hundred high school aged young people not enrolled at the Career Extension Center came for personal and career guidance services. Some came to ask for specific information, and some wished to enroll.

(11) Vocational interest surveys were given to all of the students enrolled at the Career Extension Center and to approximately seventy-five junior high and senior high students. The results were explained to them and placed in their folders.

(12) At the Career Extension Center school one hundred nineteen jobs of twelve hours per week or more were developed for seventy-nine students. Throughout the course of the year, thirty-eight per cent of the employment stations were terminated for reasons of upgrading employment, involuntary termination or job completion. Employment was not feasible for fifteen percent of the Career Extension Center students due to child care needs or academic requirements. An average of 4100 hours were worked per month by Career Extension Center students accounting for a monthly gross wage of \$11,480 representing an average hourly wage of \$2.80.

(13) A very close relationship was established with the probation

officers who looked to us for help with those students who were just out of detention and because of timing, or general emotional state, could not catch up or adjust to a regular school setting. A similar rapport was established with the Drug Clinic, Hillcrest Home for Boys, Hospitality House (a home for girls), and with the Jesus People who have made a considerable impact on the youth of our community.

(14) The active participation of three Career Extension Center staff members in the Fairbanks Personnel and Guidance Association has brought about increased awareness of the counselors role in career education. The staff has led the association in pulling together workers in the various agencies in the community. The membership has increased from about fifteen members to approximately seventy.

(15) An active parents group met almost every month to discuss mutual problems concerning their children in relation to school and home discipline. They conducted a survey which is included in the appendix. (appendix B11-13)

(16) A Career Inquiry course was developed at the Career Extension Center which is designed to educate the prospective student employee with some of the realities of job seeking, and assistance in becoming better qualified as knowledgeable, employable citizens. (appendix C1-2)

(17) A student profile form has been developed which contains all the student's past achievement and aptitude scores as well as the results of his interest inventory surveys. This helps the student and counselor come to more realistic decisions in regard to future academic work and careers to consider. (appendix B-14)

(18) The Career Extension Center was open four nights a week throughout the year. This proved very helpful to students who had full-time day jobs.

(19) An experiment of an extension of the Career Extension Center program through the month of June proved to be helpful to several students. The average daily attendance was eighteen.

(20) Through cooperation of staff members of the Career Extension Center, Lathrop High School and the Educational Department of the University of Alaska, selected students will have the opportunity to take undergraduate college courses for high school credit or suspended college credit.

(21) A community occupational survey was initiated by the Orientation-Work-Study Program with the assistance of the Fairbanks North Star Borough School District Research and Planning Department but was not totally carried out at the completion of the school year. (appendix B-15) Plans have been made to continue that research in the insuing year but the following general inferences could be drawn at the time of this report from the 650 occupations

surveyed:

- (a) Current employment opportunities in the Fairbanks area were limited to professional and highly skilled positions.
- (b) There has been very little change in number of positions in the past two years with no detectable shifts in type of predominate occupational openings.
- (c) Demand by employers for training programs was limited but what did exist consisted primarily of clerical skill needs. Some interest was also shown in personality and public relation type training.

OVERVIEW OF EVALUATION SECTION

This section contains the following parts:

- (1) Objectives of the Project
- (2) Selection of Participants
- (3) Characteristics of the Participants
- (4) Description of Measures
- (5) Summary of Third Party Interim Evaluation Findings and Report
- (6) Staff and Community Perceptions and Comments
- (7) A Summary of Findings of the HEW Region X Office Review Committee
- (8) Third Party Evaluation for the Year for Each Project Objective
- (9) Overall Summary of Third Party Evaluation

Evaluation of the Project¹

Introduction

This was the first year of the Project, and of course staff had to be assembled, operational details worked out, relationships developed, facilities and equipment allocated or purchased, etc. For these reasons, the very significant successes of the Project to date, the overall progress, the community acceptance of the Project and its objectives, the excellent staff which has been assembled and the prospects for the second year of the Project are especially impressive. As the following report indicates, this first year of the Project has been a fine benchmark in the development of education beginning in the primary grades in the Fairbanks North Star Borough School District. Much remains to be done in the future to accomplish all of the Project objectives including complete integration of the Project into the on-going educational program of the District, especially at grades 10, 11 and 12. Prospects for accomplishing this are good.

In connection with the evaluation, the third party evaluator had occasion to confer with teachers, counselors, administrators and board members individually and in groups on numerous occasions. At the outset, most of these persons (as the report to follow shows) actually had a very inadequate understanding of exemplary education as contemplated by the Project objectives; however, the general understanding and acceptance has progressed greatly as a result of the participation of many persons in the Project during its first year.

Emphasis in the evaluation of the first year of the Project was upon the collection of baseline data, the involvement of regular staff of the Borough School District along with Project staff so as to achieve mutual understanding of what should be and was being attempted and evaluated. Emphasis of the evaluation was also upon ascertaining the direction or focus of Project staff efforts or activities--since these would have a determining influence upon attainment of Project objectives. For the reasons indicated, little emphasis has been given this first year to the matter of measuring student achievement; however, the intent is to give increased attention to such measurement in the second year of the Project. Beginning with the first year of evaluation, the attitudes and roles of school staffs, counselors, administrators, board members and community are deemed to be of keen importance to the attainment of Project objectives (especially such as insuring that successful dimensions of the Project will become a part of the on-going education program of the North Star Borough and continue long after federal funding has been terminated).

The third party evaluator was privileged to maintain close contact with vocational staff in the regional office of HEW, and to participate in that office's evaluation of the Project also, which (in the writer's opinion) promoted mutual understanding and effectiveness of these efforts, as well as increasing the potential benefit to the Project, staff and education in the North Star Borough.

¹ This section was prepared by Dr. Allen Lee, third-party evaluator and follows the pattern prescribed in "Preparing Evaluation Reports", (Superintendent of Documents Catalog No. HE 5.210:10065).

At the beginning of the year, a number of outcomes (pertaining to students, staff and community) were sought and anticipated. These included:

1. Increased student awareness of career options.
2. Increased student awareness of self and innate potentials.
3. Integration of career education into on-going instruction at all grade levels.
4. More realistic career choices by students.
5. Increased employability of students.
6. Increased comprehension of students, staff and community with regard to career education, especially vocational education.
7. Reduction of the drop-out rate, and bringing those already dropped out back into the education system.
8. Better school-community communication.
9. Better utilization of community resources for education.

The evaluation report which follows illustrates the significant progress which has been achieved during the first year, and points out areas which need particular attention in the future.

The specific objectives of the Project were used as focal points for this evaluation, which included three phases which to a considerable degree were overlapping and concurrent: (1) Self-Analysis, wherein staffs in the various schools engaged in introspection with critical looks at their own dimensions of the Project; (2) identification of perceptions (or lack thereof) on the part of the community in the North Star Borough; first-hand observation and evaluation by the third-party evaluator who (with some assistance) also coordinated phases (1) and (2) above. The specific Project objectives which were used as focal points for this evaluation and which in effect have determined Project activities to date and recommendations for periodic changes are listed below.

(1) Objectives of the Project

- A. To broaden occupational orientation at the elementary, junior high, and high school levels.
- B. To broaden occupational aspirations and opportunities for youths, including those who have academic, socio-economic or other handicaps.
- C. To specifically identify dropouts (at whatever level), pinpoint causes for dropouts, plan preventative and remedial programs and promote implementation thereof.
- D. To identify and develop new opportunities for work experience and cooperative education in several occupational areas.
- E. To give more practical work experience to youth at various grade levels, and to have such experience characterized by learning while doing, significant responsibility for productive service to an employer, reimbursement (from employers) to the student for service rendered, and recognition of educational values (of such work experience) by awarding formal credit.
- F. To achieve a more realistic picture of job opportunities and to utilize such information in training for employment.
- G. To develop employability of students.
- H. To develop the assumption of responsibility for placement of students at whatever level they leave the school system.
- I. To create bridges between school and earning a living for young people who are still in school, who have left school either by graduation or dropout, or who are in post-secondary programs of vocational preparation.

- J. To make greater use of existing school facilities, especially during the summer months.
- K. To conduct inservice training for district and other personnel to achieve the objectives of this proposal.
- L. To bring general educators, vocational educators, State Department of Education staff, local school staff, teacher educational staff, Model Cities staff, staff specifically concerned with the disadvantaged and handicapped, manpower agencies and others, together in coordinated efforts to achieve the objectives of this proposal.
- M. To improve the status, scope and image of vocational-technical education.
- N. To design and consummate an objective and effective evaluation to be used for periodic modifications of the Project.
- O. To plan and promote expansion of activities to other districts (including private schools).

(2) Selection of Participants

The decision at the outset was to involve students and staff in all of the Borough schools except for those in about three small schools in somewhat remote areas.

Involved in some way in the Project were almost all of the schools during this first year. These included:

Barnette Elementary	613	students ¹
Birch Elementary	62	
Denali Elementary	730	
Hunter Elementary	632	
Joy Elementary	578	
Nordale Elementary	744	
North Pole Elementary	801	
University Park Elementary	676	
Main Junior High	817	
Ryan Junior High	965	
Lathrop High	1,753	

The extent of active involvement of staff and students was quite extensive and greatest in the elementary schools. It was somewhat less (although significant) at the junior highs. With the exception of the 75 or so dropouts who became enrolled in the Career Extension Center portion of the Project, involvement at the high school level was limited.

The greatest degree of readiness, willingness and ability to move was at the elementary level--and this was the most logical emphasis of involvement in the first year (except for the secondary dropouts where the need was very acute, the response and reception most enthusiastic). Counselors, administrators and teachers of the high school level expressed interest and support, but actually did not as a group get very involved as participants in the Project.

(3) Characteristics of the Participants

The two most extensive groups of students involved in the Project during this first year were elementary students who participated in awareness and orientation to career education, and the secondary students who had dropped out of high school. The elementary students were the body of students enrolled at these grade levels; in general all students in the class were included. The dropouts who enrolled in the Career Extension Center portion of the Project included a variety of boys and girls who for one or more reasons had dropped out or left high school. Some were discipline problems, some (many) from broken homes, some natives, some very bright students, some slow or reluctant learners, some had become disenchanted with the traditional school, some had problems with drugs and the police. Some of these students were quite stable and mature, others not. As described in more detail later in this evaluation report, in general the Project and especially the Career Extension Center has been a godsend to many of these students, and the potential benefit to the students and to society is great.

Both the awareness and dropout facets of the Project received major attention this first year, were very favorably received generally by staff, community and students, did much to establish a good image for the Project and constituted effective and efficient use of resources.

There was some criticism from some high school staff with regard to the Career Extension Center, but most of this was due to lack of adequate involvement, lack of understanding and lack of effective communication. There is increasing recognition (and this includes administration and counselors in the high school) that high school staff and students must be involved if the Project is to be effective and its programs lasting.

(4) Description of Measures

Two instruments were utilized in gathering data in written form for this evaluation. One was used primarily for collection of baseline data for the Governor's Advisory Council for Vocational Education which included data collection in the Fairbanks North Star Borough School District, and it was a simple planning matter to utilize the data for two purposes. This was the "Opinionnaire for Identifying Perceptions of Career Education" developed by Dr. Allen Lee. This instrument has been utilized in about a dozen states with several thousand respondents. Data collected were key punched and computer processed. The instrument has been refined to the point that it has a proven high level of reliability. The second instrument ("Perceptions Of Career Education") is also an opinionnaire adapted from the former for the specific purposes of this evaluation in the North Star Borough with critiquing and suggestions of a cross section of respondents in the North Star Borough. This second instrument was used specifically to identify viewpoints and the evaluations of counselors, teachers, administrators, board members and community representatives from the North Star Borough. Its focal point was the exemplary Project here being evaluated (Fairbanks North Star Borough School District Orientation-Work-Study-Placement Program).

Data for this evaluation were also collected via about 45 one-to-one interviews or conferences by the evaluator with key staff in each participating school, with central administration of the District, with Project staff individually and as a group, and observations of the principal evaluator and/or staff.

The two instruments used for collecting written responses were used in the same manner in that each application was preceded by oral and written instruction, the instruments were completed without interaction among the respondents as a routine procedure and instruction. Customary practice also was to collect the written responses, and then to follow this with oral interaction to clarify differences, questions and gather additional data on a group basis. Questions posed were designed specifically to gather information and opinions of various respondents concerning the several objectives of the Project, including progress, problems, suggestions for improvement, and criticisms in general. Although the ostensible purpose of these instruments was data collection, experience indicates that application of the instruments along with the subsequent oral interaction serves another important function of communication and involvement.

Data were also collected by the principal evaluator, by Leonard Kunzman of the Oregon Board of Education, and by Jeannette Hamby of Portland State University who assisted at varying times. Reference here is to personal interviews with numerous administrators, teachers and counselors in the central office and in ten schools which actively participated in the first year of the Project. On these occasions classrooms (during and apart from instruction-learning sessions with students) were visited by the evaluators to observe facilities, equipment, materials in use, instructional and learning activities, etc.

Preliminary observations and oral discussions conducted in the participating schools resulted in an interim evaluation report submitted on January 5, 1972, based on the assumption that some trends were becoming apparent and that several factors might well be noted at that time to allow more preparation and planning for the second year.

(5) Summary of Third Party Interim Evaluation Findings and Report

Following the collection of baseline data, numerous group and individual discussions were conducted, a considerable amount of time was spent by the evaluator with Project and other staff, discussions were held on several occasions with central administrative staff, data collected to date were compiled and analyzed and it became apparent that an interim evaluation report might be of appreciable value. Accordingly, such a report was completed and submitted to the administration on January 5, 1972. The major purpose was to call attention to current findings, apparent or suggested trends, note various definite or tentative concerns --and thereby to provide all concerned with more preparation and planning time for the second year of the Project. It seemed essential that some of this be done prior to the making of personnel decisions for the second year of the Project also.

Immediately prior to formulation of the interim evaluation report (December 13 to 19, 1971), the principal evaluator personally conferred at length with the principal of each of ten participating schools including the two junior highs, the high school and seven elementary schools concerning their perceptions of various aspects of the Project. The insights thus gained, along with the previous discussions, the results of written data collection concerning baseline information, and other observations contributed to the interim evaluation report. Items orally discussed individually with each principal included:

1. The perceptions or understanding of the principal so far as Project objectives were concerned.
2. Discussion of key objectives of the Project, especially as these pertained currently and potentially to the principal's individual school.
3. The principal's perceptions of Project activities to date.
4. Identification of the principal's suggestions, problems, likes and dislikes regarding various dimensions of the Project.
5. The principal's suggestions for the improvement of Project effectiveness.
6. Explanation of the third-party evaluation requirements.
7. Discussion of school and community involvement in the Project and the evaluation thereof.
8. Review of the principal's suggestions on evaluation procedures and instruments, who to involve, the principal's suggestions for evaluative questions and procedures.

A summary of findings at this time (mid-December, 1971) included:

1. Staff of the schools looked upon the Project with much favor.
2. Project staff without exception were highly regarded.
3. Most school staff did not thoroughly understand career education or comprehend the nature of exemplary vocational education.
4. Most staff had a healthy interest in the Project.
5. Most of the principals in the elementary schools were very complimentary about the assistance given, for example, on materials for career awareness development.
6. Few schools knew much about what other schools in the North Star Borough were doing in the Project or in career education.
7. Aside from the awareness aspect of the Project at the elementary grades, most staff saw the Project as being primarily the Career Extension Center, which to them was largely synonymous with "the dropout program or project."
8. Principals looked favorably upon the concept of community involvement in providing resources which could be used outside of the classrooms, brought into the classrooms, or otherwise brought to bear upon the matter of developing improved education (especially as exemplified by various Project Objectives).
9. Most principals strongly favored the idea of involving community representatives in aspects of the Project evaluation.
10. Principals had numerous suggestions regarding written evaluation procedures.
11. Counselors knew relatively little about career education or career guidance, and had little time for career guidance, although they professed a desire to do more.
12. Elementary teachers in general were very receptive to appropriate career education activities in their schools.
13. Most of the administrators indicated definite support for the Project and a desire for more involvement as well as indicating they could and intended to exert more initiative.

The January 5, 1972 interim evaluation report then listed each of the 16 formal objectives of the Project (which are repeated later in this report) and commented concerning the importance and progress toward attaining each. It was noted that one could not expect to concentrate

on all objectives simultaneously, that excellent progress had been made on some objectives, and none toward others. A summary of suggestions reviewed orally with staff in mid-December 1971 and submitted in the written interim report on January 5, 1972 included:

1. The Career Extension Center and its efforts with the dropout have progressed in such a fine manner. It is not desirable to de-emphasize the Career Extension Center, but it is equally or more undesirable to overlook other objectives of the Project. It is imperative that an appropriate balance and allocation of effort and resources be carefully planned and implemented.
2. Education is so frequently situated so that demands and needs exceed resources. No one intended or expected all Project objectives to be either accomplished or attempted in the first year; however, more balance among the Project objectives than currently exists is essential.
3. Attention might well now be given to the identification of priorities (so far as Project objectives are concerned) for the balance of this first year, for the second year, and for the third year of the Project. It follows that employment and assignment of staff, and budget expenditures should then be made in line with those priorities. The nine points listed below summarize this evaluator's best judgment at this time.
4. Sharpen the understanding concerning:
 - A. Who has overall responsibility for the Project.
 - B. Who has responsibility(ies) for each objective of the Project.
 - C. Who has responsibility for Project activities outside the Career Extension Center.
5. Continue the fine work with dropouts in the Career Extension Center.
6. Assign responsibility and emphasize effort to apply Project objectives in all schools (and all grade levels) outside of the Career Extension Center.
7. Employ and/or designate a staff member with responsibility for achieving objective "A" which pertains to the development of awareness at the elementary, junior high and high school levels. This is also related to objective "B" pertaining to broadening occupational aspirations.
8. Assign specific responsibility at earliest possible time for objective "C" which has to do with identifying dropouts at all levels, causes therefore, and planning preventative actions and implementing those plans.
9. Assign responsibility for objectives "D" and "E" which are concerned with "work experience" for students (especially outside of the Career Extension Center) and at various grade levels.
10. Assign responsibility and precipitate meetings (early February) to achieve objective "K" which concerns inservice education.

11. Assign responsibility for action to achieve objective "I" which concerns coordinated effort and involvement of staff in addition to those paid with Project federal funds. Should include at least counselors, curriculum people and work experience people.
12. Precipitate action to formally complete the matrix, designating priorities, people and grade levels in line with discussion held in the Career Extension Center building on December 16.
13. The prevailing image of the Project has been good--but most people have viewed it as a dropout program. The Project must be much more than that to survive, to do the job desired, and to receive continued federal funds.
14. The Project has an excellent and dedicated staff with superb morale. They should be proud of their efforts which contribute to the fine education in the Fairbanks North Star Borough.

(6) Staff and Community Perceptions and Comments

Some 55 persons were invited to provide written responses and comments on 30 areas related to Project objectives. Respondents included three members of the schoolboard, eleven principals, teachers, counselors, two librarians, and representatives of the community. Key questions, a summary of responses and comments included:

1. Note: Some schools provide learning experiences designed to help students become aware of the broad field or world of careers and the potential opportunities for future employment.

- A. In this respect, what is your school* doing now?

Responses

A lot	12%
Some	48%
Very little	20%
Don't Know	20%

- B. Should your school* be doing more or less on this?

Responses

Much more	44%
Some more	40%
Less	0%
Don't know	16%

*School board members, central office administrators and others not attached to a single school responded in terms of the district schools generally. Persons such as teachers, principals and others responded in terms of the particular school to which they were attached.

- C. Who should be directly responsible for developing student awareness to the broad field of careers?
Findings:
 Strong consensus was that counselor, teachers and parents should all have vital responsibilities here.

- D. Which students need more of this kind of education than they are now getting?

Responses

All students	72%
Some boys	4%
Some girls	4%
The academically talented.	4%
Those not academically talented	20%
Those economically deprived	20%
Ethnic minorities	16%

Respondent Comments:

Not enough learning experiences; 6th grade level doing a lot
 Uneven in our school
 Career Ed depends on teacher
 Teachers need help in working career Ed into programs
 Actual training and experience
 All should take responsibility

2. Note: Individual schools may or may not provide instruction designed to make the student aware of his own abilities, likes, dislikes and potential for earning a living and serving society in a productive manner:

- A. What is your school now doing?

Responses

A lot	8%
Some	60%
A little	8%
Nothing	8%
Don't know	16%

- B. What should your school be doing in this regard?

Responses

Nothing	0%
Some more	32%
Much more	40%
Don't know	28%

3. Concerning the matter of your school providing instruction and activities (such as field trips, outside speakers, etc.) in an effort to broaden the career aspirations of all students:

- A. What does your school now do?

Responses

A lot	12%
Some	28%
Little	24%
Nothing	0%
Don't Know	16%

B. What should your school do?

Responses

Much more	64%
Same as it is now	16%
Less	0%
Don't Know	16%

Respondent Comments:

Several field trips
Not enough in relation to opportunities available
6th grade only
Need coordination of program
Need some more
Responsibility should rest on one person

4. Does your school identify and maintain a list of dropouts?

Response

Yes	44%
No	12%
Don't Know	44%

Respondent Comments:

We have very few dropouts
State Department of Education requires a report on each
dropout or transfer.
Really don't have any.

(Analysis indicates that the "don't knows" came primarily
from persons not on school staff.)

5. Does your school identify the reason for each dropout?

Response

Yes	32%
No.	20%
Don't Know	48%

Respondent Comments:

A checklist is provided; however, some reasons are not
on checklist. Result, mark the reason which more
closely represents the case.

Not a complete list
Really don't have any

(Analysis indicates the "don't knows" were primarily
from other than school staff.)

6. Is it possible to identify potential dropouts before they
physically leave school?

Response

Yes	76%
No	4%
Don't Know	20%

6. (continued)

Respondent Comments:

Only a good teacher can do this.

I believe it is.

This really doesn't apply.

7. Does your school attempt to identify potential dropouts?

Responses

Yes 36%

No 16%

Don't Know 20%

8. For which (if any) types of students in your school is some form of work experience (part-time, with pay, without pay, with or without academic credit, etc.) desirable?

Those not academically inclined 16%

Those academically talented 20%

All students 48%

No students 16%

9. In what types of careers should some form of work experience be provided?

Responses

Electrical 60%

Real estate 52%

Transportation 44%

Communications 40%

Sales 56%

Medicine 36%

Law 40%

Public services 76%

Teaching 56%

Secretarial 80%

Construction 72%

Automotive 76%

Respondent Comments:

All students should acquire experience to some extent to gain insight and respect to labor and our economic system.

All students need work experience.

Very little of this in our school.

Depends on parent-student desires.

10. Should the school cooperate with business, professional and industrial employers to arrange work experience for which the student receives pay?

Response:

Yes 96%

No 0%

Don't Know 4%

11. Should the school arrange for work experiences in which the student receives some work experience but receives no pay?

Response:

Yes	92%
No	4%
Don't Know	4%

Respondent Comments:

Time without pay in a given setting should be limited to nine weeks.

12. Should the student get academic credit for work experience (such as in a garage, store, state agency, school, real estate office, etc.) if that experience was coordinated by the school?

Response:

Yes	96%
No	4%

Respondent Comments:

Schools would be better off if they did away with "academic credit"

13. Should the school arrange for students to receive work experience:

During school hours	64%
Outside School hours	60%
During vacation	68%

Respondent Comments:

Depending on student student--program should be individualized.

Unemployment is severe in our area. Efforts must be made for Alaska to hire Alaska youth.

Whenever possible.

14. How desirable or necessary is it that school staff be aware of probable potential job opportunities for graduates?

Response:

Non-essential	0%
Nice to know but not too important	8%
Essential	92%

Respondent Comments:

Part of Career Ed is educators to always gather information for benefit of students.

It is essential that instructors know the fields of employment.

Counseling staffing in high school has too much paper work, needs of students seem to be ignored because of this.

More important to direct and train student in his interest areas. Person that does something well and likes it can get a job.

777

15. How much does the school staff know about probable needs for manpower?

Response:

A great deal	0%
Some	48%
Not much	40%
Don't know	12%

16. Should the schools prepare youth for eventual employment in the local community?

Response:

Yes	68%
No	4%
Don't know	28%

Respondent Comments:

The schools should prepare youth for eventual employment, but not limited to local community.

Yes, only if community recognizes the youth has something to offer and will hire them.

More important for student to be trained in area he likes and can do well.

17. Should the schools assume that youth may be working some day in another community or state?

Response:

Yes	88%
No	0%
Don't know	12%

18. Does your school endeavor to teach students how to work?

Response:

Yes	48%
No	40%
Don't know	12%

19. Should your school do more or less than it currently does in teaching students how to work?

Response:

Much more	44%
Some more	24%
Same	16%
Don't know	16%

Respondent comments:

The school can't teach students how to work unless there is some family background there.

Most school work and real work aren't comparable at all.

Limited to Industrial Arts and Special Education, low I.Q.

Quite limited.

Elementary schools must teach attitudes of responsibility, etc. which will come over into work areas.

20. Who should have responsibility for teaching students how to work?

Response:

Vocational director	20%
All teachers	84%
Some teachers	8%
Counselors	24%

Respondent Comments:

Parents must cooperate
Principal decides who stays, etc.
The staff involved in Vocational education.

21. Does your school assist students who leave the school (by graduation or otherwise) to get located in another school or get employment?

Response:

Yes	40%
No	36%
Don't know	24%

Respondent Comments:

Limited to sending records, using local agencies.
Some teachers do.

22. In your opinion should your school assist in placing students (in a suitable educational situation or on a job) who leave the school by graduation or otherwise?

Response:

Yes	76%
No	4%
Don't know	20%

Respondent Comments:

For those who desire it.
School should follow student through adjustment period and assume responsibility of upgrading or retraining when necessary.
Provided we don't duplicate work of existing agencies.

23. In your opinion, should school facilities be used more?

Response:

Yes	80%
No	4%
No opinion	16%

Respondent Comments:

Cost too high.
Any school could be used 24 hours a day year round.
School facilities belong to community and should be used for adult education as well as youth.
For adult education and extended school days as well as semester school.
Recreational activities as Fairbanks offers little to the youth.
They are being used both day and night at present.

24. Do you see a need for inservice training (in career education) for teachers or other staff?

Response:

Yes 88%
No 0%
Don't know 12%

Respondent Comments:

When and where most convenient with credit.
Vacation time, at school, summer, late July
Locally
Graduate credit for all
All staff and teachers
Set up behavioral objectives
Favor released time where teachers teach four days,
then Friday is used for training.

25. Does a lack of finances, equipment or materials restrict career education in your school?

Response:

Yes 64%
No.. . . . 36%

Respondent Comments: (what is needed, etc.)

Personnel and inservice.
More education for teachers.
They could do it if they weren't so conservative.
Severe lack of teacher, administration
A commitment from the administration endorsing career education program; K-adult trained personnel to assume leadership.
Tools, typewriters, stoves, money for trips, cash registers, kitchen equipment, meters, batteries, etc.
Need extra space.
Finance to hire biggest problem.

26. Should a formal course in Career Education be offered in your school?

Response:

Yes 76%
No.. . . . 16%
Don't know 8%

Respondent Comments:

For those who want grade credit.
A full time person should be appointed to work on just careers.
If Career Education begins in Kindergarten, there should be no need for a formal course.
Should be correlated with all subjects to show relation to school and to be effective.
Don't call it that, though.

27. Should Career Education be required for all students?

Response:

Yes 64%
No 20%
Don't know 16%

Respondent Comments:

Only if interested; all students should be made aware, but not required.

I don't believe in requiring, but students should be exposed.

No attempt made to inform students of material available.

Many will never be aware of Careers. High School does a poor job of training after graduation.

Elective.

28. Do you have adequate Career Education information in your school library?

Response:

Yes 44%
No 44%
Don't know 12%

Respondent Comments:

A good beginning.

What we have is hardly used.

Nobody pays attention to it.

Greatly improved in past year.

Semester course.

29. Does your school have counselors who have adequate time available for career counseling?

Response:

Yes 12%
No 76%
Don't know , 12%

Respondent Comments:

They are expected to be all things to all people and are doing things they shouldn't have to do. They don't have the time to spend in this area.

None at all.

But they do a poor job of it.

The principal and counselors had a conference immediately before school closed. The purpose was to recommend a counselor for a summer work shop in career education.

No counselor, except me, would take the time from their summer vacation nor do they want to become involved.

Neither time nor adequate training or desire. By this an admission it is too much work!

Schedule board refuses to see need for counselors on elementary level--cost too much.

(7) A Summary of Findings of the HEW Region X Office Review Committee

On April 5 and 6, Mr. Samuel Kerr, Acting Director for School Systems in the United States Department of Health, Education and Welfare Region X Office directed a Review Committee which functioned in Fairbanks. The Committee's work was well received and rendered valuable service to the Project. Because it focused upon the five major provisions of BAVTE/DVTE Policy Paper AVL-V70-1 under which all of the Project's objectives are grouped, the HEW Review Committee's findings present a concise and valuable overview of Project status at that time. Because the Project's third-party evaluator was privileged to serve on the Review Committee, it was made possible for the two efforts to be mutually complementary for the benefit of the Project. The five guiding factors in the Policy Paper and the Review Committee's findings in brief are:

The Part "D" Exemplary projects are intended to put into practice some of the Research & Demonstration activities that have been undertaken in the field of vocational education. Each of these projects is intended to conduct research-based career education that combines, in one operational setting, all of the following factors:

1. Provision for a broad occupational orientation at the elementary and secondary school levels that will make the student aware of the range of options open to him in the world of work and how his interests, aptitudes, and abilities relate to them.
2. Provision for work experiences, cooperative on-the-job education, institutionalized training, simulated experiences or other similar programs that make possible a wide variety of offerings in many occupational areas.
3. Provision for students not previously enrolled in vocational programs to receive specific training in job entry skills just prior to leaving school. (Some of these programs might be very intensive and of short duration).
4. Provision for intensive occupational guidance and counseling during the last years of school and for initial job placement of all students at the completion of their secondary schooling. (Placement might be in a job or in post-secondary career preparation.)
5. Provision for the grantee or contractor to carry the program on with the support from regular funding sources after the termination of the Federal Assistance.

With these five guiding factors in mind the project at the present stage of development and operation appears to be fulfilling the intent of factors 1-2-4-5 in varying degrees, but does not seem to be directing attention to factor No. 3.

FACTOR No. 1

Project Objective #1 - To select, develop and implement curriculum provisions to achieve broad career (occupational) awareness and

orientation at the elementary, junior high and senior high levels.

The plan for developing and implementing this objective is well defined in the proposal statements. Summer institutes and seminars which bring together elementary, secondary teaching personnel, school administrators, guidance counselors, State Department of Education specialists, Consultants and Project Staff to develop materials and procedures seems to be an excellent approach. When the study guide for occupational education in grades K-12, referred to in the project, is fully developed and implemented according to plan, the career awareness and orientation phase of the Project should be strengthened and the students served as envisioned in a total career education concept.

A discussion of the role of the elementary school in providing career awareness and orientation as an integral component of the Project with teachers and administrators revealed an intense interest in the contribution they could make. They expressed their concern for additional workshops and seminars that would apprise them of ways and means of adapting curriculum and methods to fit the concept. Most of the people involved in the project seem to be knowledgeable about what needs to be done and are anxious to participate in work sessions that will provide the technical assistance needed to:

- A. Identify sources of occupational information and materials.
- B. Adapt curriculum to career education concept.
- C. Develop applicable teaching methods and procedures.

FACTOR No. 2

Stated Project Objective #2 - Promotion and Implementation of Work Experience and cooperative education to facilitate a wide variety of educational opportunity especially suited to the needs of dropouts, potential dropouts, disadvantaged, handicapped and other students, including those with special needs.

The Career Extension Center appears to be providing for the identification and rehabilitation of dropout students in an adequate manner, however, the service to the potential dropout seems to be either very weak or non-existent. This may be attributable to the separation of the Extension Center from the school facility which gives the impression that the center is an entity within itself and not part of the total education system.

Many of the jobs in which the student is placed fill the student's need for financial assistance and job responsibility but in some instances are not true cooperative education training sites where on-the-job experiences and training, correlated with in-school activities, lead to employment in career ladder positions. The committee recognizes the value of jobs which fill the students' needs for financial assistance and job responsibilities in the rehabilitation process and strongly encourages the continuation of this program. We would recommend, however, that whenever possible, emphasis be focused on placing students in career ladder jobs with the potential for cooperative training. The full potential of the high school vocational programs in trade and technical, business, distributive and Consumer-Homemaking education does not appear to be utilized in the Project at this time. A stronger effort needs to be made to correlate these activities with the other phases of the Project.

FACTOR No. 3

Stated Project Objective #3 - Development of Provisions for Students not previously enrolled or adequately served by vocational programs to receive specific training in job entry skills just prior to the time they leave school.

The plan of action as outlined in the Project identifies very accurately what needs to be done to accomplish this objective. At this stage in the Project it appears that very little has been done to implement this very important aspect of the Project.

Some of the activities that should be undertaken to accomplish this objective include:

- A. Procedures for identifying students who are nearing completion of their high school program, or are potential dropouts, who need salable skills. Use of Guidance Counselors should be an important part of this process.
- B. Provide intensive vocational education in many occupational areas through the use of extended day or evening instruction. Cooperative education training agencies and vocational education facilities may be utilized separately or in concert to provide the training. The adoption of individualized instruction units should be explored.

FACTOR No. 4.

Stated Project Objective #4 - Provision for implementation for intensive guidance and counseling during the last years of schooling and for initial placement of students at the completion of their schooling.

The committee was impressed with the emphasis placed on the guidance and counseling needs throughout the total school system. This must be recognized as the heart of the total Project and must certainly reflect adequate staff to provide the services. A discussion with the counselors at the junior high level suggests that many worthwhile activities are being carried on. To accomplish the accepted objective more time and staff needs to be devoted to it and the guidance counselor-student ratio should be established at a workable level. Additional guidance and counseling staff added on a division-wide basis should do much to strengthen the total career education effort.

The first year of operation which, as projected, was to be devoted to the establishment of the project, must be viewed as one of commendable accomplishment. To continue with the outstanding work being done and to bring the project to fruition the committee feels that the following activities, included herein as recommendations, must be adopted at an early date:

1. Review the organizational structure of the Project, revising it as needed to combine the several components of the existing Project into a unified whole. At present it appears that the Career Extension Center is an entity within itself rather than one phase of a total Career Education project affecting all students in the North Star Borough and not the dropout alone. There seems to be a need for more coordination between

the vocational education division, the elementary secondary division and the Career Extension Center. One such organizational structure could be organized as:

Project Director
Office of Assistant Superintendent

Coordinator Extension Center	Coordinator All Vocational Programs	Coordinator Elem. & Sec. & Guidance
---------------------------------	--	---

2. Provide an Intensive Vocational Curricula that will prepare students who are approaching the end of their formal school program with salable skills in their selected occupational area. This will require direction from the coordinator of vocational programs.
3. Conduct in-service workshops during the summer to explore methods of correlating all elements of the Project and to develop curriculum and guidance materials related to the career self-awareness and orientation phases of the Project.
4. Conduct a workshop this summer for all guidance and counseling personnel in the North Star Borough School District and the Project staff. This will provide opportunity for an exchange of ideas on project goals and promote correlation of the overall guidance activities with the Project objectives.
5. Revise Project time-line schedule to conform with the delayed funding date and Project start.

The review committee was favorably impressed with the activities being carried on and the apparent dedication of the staff to meet the needs of all students.

(8) Third-Party Evaluation for the Year for Each Project Objective

Data for this evaluation were gathered in a variety of manners throughout the year. These included:

1. Self-Analysis - Wherein Project staff and other school personnel (teachers, principals, counselors, central administration and curriculum personnel) gave their individual perceptions of the various aspects of the Project in writing and/or in oral discussion. School board members were also included.
2. Community Reactions - Wherein a cross section of parents, business and industrial representatives gave their perceptions of the various dimensions of the Project in writing and in discussion.
3. Third-Party Observations - Wherein the principal third party evaluator and assistant personally observed Project operation on many occasions in the Career Extension Center, observed instructional-learning activities in classrooms throughout the Fairbanks North Star Borough School District, conferred with school staff (teachers, students, counselors, principals, etc.) in all schools, met with Project and related staff in groups and individually, and conferred with other interested parties.

The third party evaluator collected a variety of data, analyzed and interpreted these, considered the perceptions of many, and formulated conclusions. The observations and suggestions of myriad persons were considered in the formulation of the following evaluation; however, in the final analysis, the various statements represent the best judgments of the third party evaluator.

(A) Project Objective: To broaden occupational orientation at the elementary, junior high and high school levels.

Good progress was made in elementary schools. Some good progress was made in the two junior high schools. For example, the work of Frank McGuigan in Main Junior High was exemplary. Relatively little was done at the high school--and this merits major attention next year. Excellent progress was made with those dropouts who enrolled in the Career Extension Center. Little was done with others.

(B) Project Objective: To broaden occupational aspirations and opportunities for youths, including those who have academic, socioeconomic or other handicaps.

This should apply to all students at all grade levels. The major thrust of effort during the first year of the Project had been for those high school dropouts who enrolled in the Career Extension Center. The counselors and other staff in the Career Extension Center did fine work and made excellent progress with this group of dropouts. Specific attention might well be given to those youth (especially those with handicaps) in the regular District schools. A look at what is being done in this regard in the exemplary Project at Helena, Montana is suggested.

(C) Project Objective: To specifically identify dropouts (at whatever level), pinpoint causes for dropouts, plan preventative action and implementation thereof.

This has yet to receive adequate attention. There is need for the regular school counselors to become involved in this. The Project Director, in conference with central staff and the school principals might provide the necessary leadership and precipitate action here. University involvement, such as with an intern and/or a Master's or doctoral candidate is a possibility which might be explored and implemented.

(D) Project Objective: To identify and develop new opportunities for work experience and cooperative education in several occupational areas.

A fine job is being done for dropouts enrolled in the Career Extension Center. The regular high school cooperative program and the Career Extension Center program need to be integrated, with a joint staff working closely together. Note comment in section (7) (Factor No. 2) preceding. District staff (regular and Project) need to define the nature of desirable "work experience" for each grade level and then regular and Project staff should proceed to expand this phase of education in the North Star Borough School District.

(E) Project Objective: To give more practical work experience to youth at various grade levels and to have such experience characterized by learning while doing, significant responsibility for productive service to an employer, reimbursement (from employers) to the student for service rendered, and recognition of educational values (of such work experience) by awarding formal credit.

Note comments on item (D) above. The suggestion is that each school should define appropriate "work experience" for each grade level, one person in each school should be designated with responsibility for coordinating the individual school's work experience program, and one person should be responsible for District-wide coordination. All of these coordinators (with the possible exception of the last) should be paid with District rather than Project funds. Maybe a responsibility of the District Vocational Director's office.

(F) Project Objective: To achieve a more realistic picture of job opportunities and to utilize such information in training for employment.

Little systematic attention has been devoted to this to date. The suggestion is that the District vocational Director's office might head up this activity. He should work closely with the office of the State Director of Vocational Education and other state agencies on one hand, and with local school staff (teachers, counselors, curriculum staff and Project staff) on the other hand in this objective. The local advisory council(s) has a key role to play here.

(G) Project Objective: To develop employability of students.

Career Extension Center activities have made excellent progress in this objective. Staff from the District Central Office, the several schools, (all grade levels), the Vocational Director's office and the Project should work together in defining the nature of "employability" deemed to be desirable for each grade level, respectively.

(H) Project Objective: To develop the assumption of responsibility for placement of students at whatever level they leave the school system.

The Career Extension Center is exercising this function on behalf of the students enrolled therein. The intent District-wide should be to help or assist with placing each student (who leaves a school via graduation or otherwise) to become suitably situated in either a continuing education program or on a job. Such provision might well be considered for incorporation in the District's position statement on Career Education subsequently referred to.

(I) Project Objective: To create bridges between school and earning a living for young people who are still in school, who have left school either by graduation or dropout, or who are in post-secondary programs of vocational preparation.

Again, the work with those students enrolled in the Career Extension Center is superb. There is need to generate a program for identifying other young people and their needs, and doing something about these. The suggestion is that leadership for this might best be given by the Director of Vocational Education for the District.

(J) Project Objective: To make greater use of school facilities, especially during the summer months.

This is important, but not of the highest priority. Unless pressure for action develops spontaneously, the suggestion is that available talent be focused upon higher priorities at this time.

(K) Project Objective: To conduct inservice education for District and other personnel to achieve the objectives of the Project.

Group and individual inservice to date has been good. Much more is also needed to prepare and enlist District staff in the attainment of Project objectives to improve education in the District. Inservice meriting top priority in the near future should involve staff from all grade levels and include:

- (a) A study of the cluster concepts
- (b) A review of existing cluster systems
- (c) Identification (formulation if necessary) of a cluster taxonomy deemed most appropriate for the North Star Borough School District
- (d) Establishment of cluster priorities for various grade levels (recognizing it is not feasible to give attention to all clusters at each grade level)
- (e) Curriculum study and revision to identify and incorporate elements of career education at all grade levels

Inservice (desirably in cooperation with a university counselor education program) should also focus upon the identification of new roles and responsibilities (for counselors, teachers and curriculum staff) for career counseling.

(L) Project Objective: To bring general educators, vocational educators, State Department of Education staff, teacher education staff and others together in coordinated efforts to achieve the objectives of this proposal.

During the first year of the Project there have been numerous instances of fine coordinated efforts of state education agency staff, North Star Borough staff, university staff and community. Excellent as such efforts have been, there is need for these to be intensified and greatly expanded. Project staff efforts have been effective in directly working at Project objectives. However, there are insufficient Project staff to get the total job done alone, and even if they could this would not enhance the chances for successful activities to continue when Federal funding ceases. The University has something to contribute, and a great deal to gain by being actively involved. The greatest need in relationship to this objective and the total Project is for counselors, curriculum staff, principals, the North Star Borough School District Vocational Director and staff, and teachers throughout the District to assume responsibility for implementing appropriate exemplary career education at the various grade levels.

(M) Project Objective: To improve the status, scope and image of vocational-technical education.

Project activities in career education should encompass vocational-technical education even more than they have to date, and needed leadership can best be given in this regard by the District's Vocational Director. Some good involvement and cooperation has been existant from the conception of the Project. More is urgently needed. The Project to date has contributed substantially to the vocational-technical image and its enhancement. A great potential remains untapped.

(N) Project Objective: To consummate an objective and effective evaluation to be used for periodic modification of the Project.

To date, school staff and the community have cooperated enthusiastically in the design and conduct of the evaluation. Central staff and Project staff have been objective, helpful and responsive not only in the collection of evaluation data, but (equally or more importantly) in their receptiveness to and action upon suggestions.

(O) Project Objective: To plan and promote expansion of activities to other districts (including private schools).

There has been good communication with the State Department of Education staff (both general and vocational). This needs to be continued and expanded, to meet the needs for dissemination which will be increasingly greater in the second and third years of the Project. The Project staff have been hospitable and helpful to the occasional visitors. Many more may be anticipated. The District, the State Department and Project staff should together devise a promotional, informational program to encourage visitors.

The University has had some good but relatively meager involvement. The Project and the attendant concepts of exemplary Career Education have monumental implications for preservice and inservice training for all prospective and current teachers. There is urgent need for development and implementation of a plan for teacher education and counselor education staff at the University to "get with it".

(9) Overall Summary of Third Party Evaluation

(A) Project activities for the first year were high priority and outstanding progress has been made.

(B) The attitude and leadership of the local administration and especially of the Assistant Superintendent have been excellent and effective.

(C) The District has recruited and assigned an outstanding staff to work on this Project. They have worked diligently and effectively and are to be complimented accordingly.

(D) The fine Career Extension Center has constituted a highlight of Project development in this first year.

(E) The immensity of the tasks inherent in the Project precluded the possibility of attacking all of the objectives during the first year.

(F) Even with Herculean effort, Project staff alone cannot hope to attain the objectives of this Project; nor is it desirable for them to do it alone. Intimate and extensive involvement of regular District staff is absolutely essential to all phases of this activity.

(G) The Career Extension Center cannot hope to meet all current or prospective needs for dropouts. The answer is not to expand the Center so much as it is to involve the regular high school staff (administrators, teachers and counselors), the central office staff, and the Vocational Director's office in the effort to consummate change for improvement in the District schools.

(H) The District Vocational Director and staff have been cooperative and helpful since the conception of the Project. The need now is for those people to assume more responsibility and be much more actively involved.

(I) Principals throughout the District need to be involved more. They are aware of needs and appear to understand the concepts of career education many times--but some combination of factors has kept them from as much active involvement as they should have in the Project.

(J) Central office and especially high school staff should be much more intimately involved in policy-making for the Career Extension Center than they have been. This will be for the good of Lathrop High proper as well as the Career Extension Center. The Career Extension Center policy, operation and image should be such as to make it an actual part or dimension of Lathrop--rather than a separate and independent high school. The objective should be to encourage some Career Extension Center students to take some of their education courses at Lathrop while enrolled in the Career Extension Center. Whenever and as rapidly as possible, Career Extension Center students should be phased into Lathrop.

Counselors in general have been friendly bystanders, and now need to be given (or assume) specific and active roles in seeking attainment of Project objectives.

(K) The Assistant Superintendent should exercise leadership in identifying new roles and responsibilities for counselors, curriculum staff and teachers in working together to improve career counseling.

(L) Awareness, orientation, exploration, cluster training and vocational training need expansion at various grade levels.

(M) Inservice education for teachers, counselors, and principals at all grade levels should be given one of the highest priorities for use of Project monies in the second year.

(N) Early attention (inservice) should focus upon the identification and adoption of a career cluster taxonomy and the assignment of priorities to the clusters. These priorities should be the focal point for curriculum planning in career education at each grade level.

(O) The Assistant Superintendent should provide leadership for the identification and development of desirable student outcomes

(behavioral objectives) relating to the Project, vocational and career education generally.

(P) The Assistant Superintendent should provide leadership for the formulation and eventual adoption (by the School Board) of a District position paper or overall policy for Career Education.

(Q) Project and District staff are deserving of high praise for the dynamic and worthwhile accomplishments of the Project in the first year.

(R) The successes of the Project to date and apparent plans for the future constitute ample justification for continued federal funding. This is fruitful investment of taxpayers' monies!

F. Conclusions, implications and recommendations for the future.

- (1) At present one Career consultant covers the entire district. It is recommended that two others be added to the district; one for elementary, one for the junior high schools, and one for the senior high school.
- (2) The three Career Consultants should have a separate facility and work under the direction of the Assistant Superintendent who is directly responsible for all school curriculum. This would remove the connotation of being a program more closely associated with the Career Extension Center school than with any other school in the district.
- (3) Although we have an up to date bibliography of all the career related materials in the school district, it must be broken down into a more usable form. The technical materials should be separated from the general information materials. A suggestion is to indicate in some way what objective or developmental goal would be best met by material used.
- (4) There is a lack of intermediate career development materials within the school district. It is recommended that more materials be previewed and then purchased in this area.
- (5) The Room to Grow material should be re-evaluated. It is possible that it should be used at an earlier age, or substituted by something that seems more appropriate.
- (6) It is strongly recommended, due to past successes in this area, that considerably more local audio-visual materials should be developed to present community resources. This is an excellent learning tool for students--both in the development area and the viewing of the final productions.
- (7) The total curriculum of the school district, K-12, needs to be more carefully studied to cover areas without repetition or deletions. The Career Curriculum can then be better integrated into the curriculum to more effectively capitalize on the total educational process.
- (8) Beginning in the intermediate grades, it is recommended that an on-going career profile be developed on each student in the district's school system. The career profile will reflect occupational contacts, exposures, test scores and counseling records as the student progresses through the school program.
- (9) Staff contacts and survey results show a very great need and demand for in-service training and workshops if an integrated career program is to have any impact upon the students in our school district.

- (10) It is recommended that the teaching staff at the Career Extension Center be increased in number.
- (11) There should be a continued effort to seek funds for on-the-job training.
- (12) A flexibility of scheduling, especially in the vocational programs, should be instituted to better aid the career guidance of potential school dropouts. This flexibility should include the cooperative programs as well as the skill building courses such as carpentry, printing, etc.
- (13) More night school opportunities and innovative summer programs should be developed to expand services to students.
- (14) A greater utilization of the University resources should be a priority for the coming year. More communication and cooperation with the University staff could bring more awareness on the part of the student teachers of the career development program, developing units for individualized teaching and tutoring techniques. There should be an exploration of ways in which credits can be transferred, and the expertise of the University staff could be tapped for services to the young people who are disenchanted with their public school experiences.
- (15) The occupational needs and training survey now in progress in the Fairbanks area should be continued.
- (16) In order to use job-training stations throughout the community, some provision should be made for student transportation. The cold weather prevents the students from walking very far, and public transportation is virtually non-existent. This precludes taking many good jobs in the out lying areas.
- (17) Consistent, continued research should be carried out to find causes for students dropping out of school and methods of prevention.
- (18) The counselors in the school district need to find ways in which they can spend more time in person-to-person and group counseling sessions rather than be consistently inaccessible to the students due to clerical work.
- (19) As often as possible, students who have been helped at the Career Extension Center should be encouraged to return to Lathrop High School, at least on a part-time basis.

APPENDIX A

PAYSTREAK

Vol. XXXV, No. 3

LATHROP HIGH SCHOOL, FAIRBANKS, ALASKA

Friday, Oct. 1, 1971

Career Extension Center will help dropouts

New approaches to learning are being instituted in the Fairbanks North Star Borough School District.

Under direction of Mrs. Irene Cleworth, counselor last year at Lathrop, an orientation-work-study program has been established. Located in the Career Extension Center at 1416 Gillam Way, the facility serves 50 to 60 students who have dropped out of school.

The students work toward a high school diploma by taking one half day of individual instruction, and one half day of job training.

Classwork is not easy, or "mickey mouse," but different in that the student is involved in planning his own program, in which he works at his own pace to complete units for credit.

The students also receive credit for work done on jobs.

By the administration of

career interest tests, and under the supervision of a work experience coordinator, the student is helped to find a job or to choose a vocational course offered in the school district.

Young mothers wishing to complete their education often bring their babies to this relaxed atmosphere.

Orientation-work-study program students are invited to come to Lathrop for lunch, and to extra-curricular activities such as dances.

The school staff includes two teachers and a counselor, a student government, and an advisory board. The latter consists of local businessmen and women, students, and other concerned people.

On a typical day, a casual visitor to the center might observe two or three students studying at tables, a group involved in a discussion about

patriotism, and students talking with the counselor about career goals. There would be some individuals in the office asking

how they could be included in the program, and if asked, some who comment that they're mighty glad they are.

Fairbanks Daily News-Miner — April 29, 1970

JUNIOR BANKERS — Joy elementary students Melinda Howard, left, and Linda Lienard, right man their city's First National Bank. The student's business is part of a city display entitled "World of Work" presented to parents at a PTA meeting early last week.

Attaining skills that will help students make meaningful career choices can be in many fields such as science, photography, journalism, secretarial training, aircraft mechanics, general shop, home economics and many others which are offered in the Fairbanks North Star Borough School District.

12—Fairbanks Daily News-Miner, Fairbanks, Alaska, Monday, June 5, 1972

PRESENT DESK — Four members of the industrial arts class at Lathrop High School presented Lew Dey, left, principal at Barnette Elementary School, with a desk for the school. The members, Randy Walker, Jon Meyer, Mike Kerekes and Ted Paisley, are participating in the Career Extension Program at Lathrop. Those in the program attend classes for half a day, then receive practical job training during the rest of the day. The desk was built as a Career Extension Center project to inject meaningfulness and practicality into the education program. Jerry Morang, right, of the career extension center, is the work experience coordinator for the program.

Vocational guidance week

Students see, work in firms

By SUE LEWIS
Staff Writer

This week as the nation observed Vocational Guidance Week, students and adults in the North Star Borough School District are receiving training and counseling to help them in the work world.

Gov. William Egan has declared the week of Oct. 24 to 30 Vocational Guidance Week. The week is being observed throughout the nation. This year the theme is "Turn On... Tune In... Your Future."

Mrs. Barbara Pechan, career consultant for the school district, said the district has an active vocational program and has met with excellent community cooperation.

"We've found the community very willing to cooperate," she said. During the week she said they hope to demonstrate some of the vocational programs now underway in the district.

One program has placed 120 students on part-time jobs, giving them class credit to help toward graduation. Four vocational coordinators, Jerry Morang, John Pence, Jack Barham, and Doug Fowler, find jobs for the students, teach classes in job preparation and attitude formation, and follow-up job placement with both student and employer consultations.

Student jobs range from library aids to cake decorators to store clerks. Most of the jobs are half-day jobs, giving the students time to attend classes.

Interested students have the chance to view a total business operation in another program. Several local businesses have volunteered to show their operation to groups of students.

For example, Mrs. Pechan said 10 students a week tour the

BANKER-TO-BE — Robert Cook sorts mail at the First National Bank. Cook is in charge of the mail room at the bank. He spends afternoons there, and attends classes in the morning under the school district's work-study program.

Fairbanks Medical-Surgical Clinic. "They check out not only health center operations and careers in medical fields, but filing, records, and so on. The Fairbanks North Star Borough gives the business education girls an intensive view of its offices."

A new program this year also takes a look at local businesses. The career inquiry class is formulating information on careers that applies to Fairbanks.

"We are looking for businesses that will allow students to take slides, interview them, find out about training, starting pay, and so on." Last year counselors from Main Junior High began this program, but students at the Career Extension Center this year will continue.

Eventually, they hope to make tapes and slide shows that can be shown to elementary and junior high students. These will be used in connection with a program of

progressive career education from kindergarten through twelfth grade.

Junior high students have a

An attempt has been made to set up a Career Corner in each school library. This picture is taken in the Ryan Junior High School library.

As an office assistant to the secretary in the Counseling Office, this student is learning the importance of accuracy in record keeping.

This student is working at acetylene welding, a skill learned in his vocational class.

A second try for drop-outs

It's no ordinary school. The blackboard and rows of seats are noticeably missing and there are no tardy bells here. Instead the gentle beat of the "Iron Butterfly" floats from a downstairs lounge.

The students aren't typical either. They lay sprawled across the carpet floor studying, or propped against a wall engaged in group discussion about politics.

Most of these students dislike or have already quit other public schools in the Fairbanks North Star Borough School District. This is a drop-out school, or more officially termed the Career Extension Service.

The newly opened Career Extension Service, under the direction of Irene Cleworth, is operated through a \$100,000 federal grant and some state funds. Its specific aim is to encourage students to finish high school and at the same time prepare them for the work world.

The school is staffed by Mrs. Cleworth; two teachers, Joe Tremere and Melinda Gordon; Counselor George Zeigler; and Barbara Pence, a work experience coordinator.

The student-teacher ratio is kept low to give each student individual attention and a liberal amount of freedom. In a typical arrangement, a student may sign a contract for a course, completing each phase of the agreement at his own pace until he receives credit.

Students are totally responsible

for their own lessons, something new to most public school veterans. "Some think this is a soft way out," advised Mrs. Cleworth, "but actually it is much harder." Students, she says, are setting new patterns of discipline and display a willingness to learn.

Several students use the school as guidance to prepare for the GED, or high school equivalency test.

A work experience coordinator tests the student for career aptitude and then helps him find a job or choose a vocational course offered in the school district. School credit is received for on-the-job training.

"Our aim, says Mrs. Cleworth, is to give every kid some skill or vocation before he leaves us." Currently about one third of the class members are employed, unfortunately.

Mrs. Cleworth and several others conceived this work-study for the North Star Borough several years ago. They compiled a proposal showing the need for such a center, but the idea was rejected at the local and state level. She and some other professional people rewrote the proposal. "There is a big impetus toward vocational training," said Mrs. Cleworth, "so we molded our project around that concept." This July the grant application from the federal government became actual

funding. Mrs. Cleworth resigned from her job as a Lathrop High School Boarding Home Counselor to become the first director.

Letters were posted to students who had dropped out or who had a record of poor attendance in their previous high school career. Half of those, about 25 students, were interested and enrolled.

According to the director, the school is filled to a capacity of 60. Forty kids are on the waiting list, and more apply every week.

One student, named Tina, had some definite things to say about her school.

"I love it here," declared the former Lathrop dropout. She had planned never to go back to high school, until she got an invitation to the Career Extension Service.

Now Tina plans to stay at the Center to obtain her high school diploma.

Several married students who dropped out a few months before graduation have returned to complete their education, sometimes bringing their babies into the school's relaxed atmosphere.

Of course, not all the students describe the Career program in such glowing terms, or benefit from it.

But most agree that a high school diploma is needed in the work world and have taken advantage of the program's freedoms and opportunities. As one kid put it, "What's left when you drop out of drop-out school?"

Mr. Joe Tremere jokes with students Mike Campbell and Dallas Sears after a history consultation. The two are completing diploma requirements with individualized training. They also work in the community half of the day.

ALWAYS WILLING TO TALK - Irene Cleworth, director of the Career Extension Service, talks with a new girl who wants to enroll in the school. Mrs. Cleworth originally applied for a federal grant to initiate this program several years ago and calls the school "a dream come true."

WORKING TOWARDS GRADUATION - (Above) Once drop-outs, about 60 kids regularly attend the progressive school at the North Star Borough Career Extension Service. Jeff Steele (left) and Ames Parry come to study for their GED, or high school equivalency test, which will help them in the world of work.

Driggs Quietly Trains at Arctic Health and Research Center

By JACQUELINE GLASGOW
Staff Writer

Sheldon Driggs, an eighteen year old Eskimo boy from Wainwright, moves quietly and confidently through laboratory tasks at the vast and impressive Arctic Health and Research Center on the University of Alaska campus.

Alternating his time between the environmental engineering branch, the bacteriology lab, and the virology lab, Sheldon is being trained in basic laboratory techniques.

At the same time, he is completing his high school education in an extraordinary program arranged by the Career Extension Center of the Fairbanks North Star Borough School District.

Sheldon's story is a story of many community forces pulling together to help one very bright and exceptional young man.

His schooling is arranged through the Career Extension Center with the assistance of the University's tutorial service. His training is the outcome of the Native Laboratory Aid Program of the Arctic Research Center which is an extension of the U.S. Public Health Service.

Under special arrangements made through the Boarding Home Program, Sheldon lives on campus with the family of Dr. William Sackinger, a lively household since the Sackingers have six children of their own.

Spending money, important to any teenager, was arranged through the help of Leonard Hamilton at the Fairbanks Native Community Center. As part of the Work Experience Program, Sheldon is paid for the hours he puts in at the research laboratory.

The story is all the more remarkable because Sheldon was very close to becoming one of the growing and alarming number of high school drop-outs.

Like many young people from bush areas, this young man had trouble relating to urban school life. After a dismal beginning at Lathrop, he was ready to give up and go home; and the BIA made arrangements to send him back.

Luckily one of the counselors at Lathrop referred him to Career Extension, presently located in a small building about a block or two from Lathrop.

As you walk into the Center,

a sign stops you at the door: "CAUTION, HUMAN BEINGS HERE, HANDLE WITH CARE."

Originally funded by federal grant but now supported by both the state and the borough, Career Extension is an experimental program designed to make school extend beyond the school walls, out into the community.

Irene Cleworth, the school's director, pointed out that today's young people are no longer buying the old concepts of education.

In more and more cases, the gap between the student's concept of the world and the world the school presents him with widens until, at last, a split occurs.

The student, frequently discouraged, sometimes angry, and often hostile, drops out.

Mrs. Cleworth believes that if you can make school make sense, the kids will buy it. If school can relate to the larger world outside, in a job, for instance, you have a better chance of keeping that child in school.

Every student at Career Extension is helped to find a job in the community. He then works at his own pace under teacher direction, with no fixed class schedules to meet. Night study is arranged for those with daytime jobs.

This was the concept applied to Sheldon's case, although Sheldon is an exceptional student in that he does not attend any classes at the Center. All of his studies are done under the direction of his tutor, Jim Toston, consulting with the staff.

In June, Sheldon will take the GED examination (General Education Diploma), a high school equivalency test. If he passes, this will entitle him to a high school diploma and open other doors.

Sheldon already has the tentative offer of two jobs upon completion of his training. His primary goal is to go back to Barrow to work at the Navy's Arctic Research Laboratory.

Jerry Morang, Career Extension's vocational counselor, has a great amount of faith in Sheldon.

"I think he has distinct leadership qualities," Morang said.

Sheldon Driggs, laboratory trainee at the Arctic Health and Research Center on the University of Alaska campus, handles mice used in virology experiments with forceps and rubber gloves. The colony of mice must be kept highly sterile for responsive testing to viral injections.

"I have a feeling we will be hearing a lot more about this boy in the future. He wants to have some kind of impact on his culture, and he knows he needs the tools to do it. His diploma and the training he is getting here are just the beginning."

Last year the Arctic Research Center took five trainees into the program, of which only two finished. This year Sheldon is the only trainee and has the luxury of being coached privately by some of the Center's top men.

Sid Heidersdorf, in charge of the Laboratory Aid training program, personally spends about one and a half hours a day with Sheldon. Of course, he pointed out, such one to one counseling is very expensive and felt that next year they would either have to drop the program or expand it.

He felt that Sheldon would have benefitted from a little more contact and exchange of ideas with young people, going through training at the same time.

In the past few months, Sheldon has had complete responsibility for a large colony of very pure mice used in virology experiments. Don Ritter, one of the scientists of the virology section, instructed Sheldon on all phases of these experiments, in which mice were injected with small quantities of virus and carefully observed for follow-up studies.

So critical is the sterility factor that the mice are handled only with forceps and rubber gloves. The entrance to the virology section is closed off by means of two doors with an

air lock between. You cannot open the inner door until the outer has closed behind you.

Ritter was also instructing Sheldon in the use of tissue culture as another means of testing, demonstrating the procedures with small glass flasks containing vero tissue (African green monkey).

In the weeks to come, Sheldon plans to work in the large animal section, where studies are made using black bears, coyotes, dogs, wolves, sheep, fox, pigs and rabbits.

Sheldon's trapping skills were being put to use as he and a friend set traps near the campus for rabbits to be used in the experiments.

When asked what per cent of Career Extension students were Native, Jerry Morang said, "I'm not sure, about the same ratio as Lathrop, I'd say, about 20 per cent."

"Mostly," he added, "these are urban Natives." He explained that usually the bush kids who come in on the Boarding Home Program when they fail to work out at Lathrop, are often reacting to all school as a bad experience.

At Career Extension, no grades are given. There is work to be completed. When the student completes the work, he gets credit.

One student may take two weeks, another two months. "I think our students work harder than anyone else," Mrs. Cleworth said. "They have to."

Sheldon works a full eight hour day at the Arctic Research Center. After supper, he goes over to his tutor's and prepares for his GED examination.

"Some people have the idea that drop-outs are slow students," said Mrs. Cleworth. "This is not true. They are just average. In fact, we have some very bright students who just want to do it their way. And they're doing it."

Another poster on the wall at the Career Extension Center reads: "You are and we are ... a mystery."

Every child and every student is a unique being, full of as many mysteries as can be found under a laboratory microscope.

Sheldon Driggs is very definitely doing it his own way.

Career Extension's super plan

School and work mix well

Since the conception of the North Star Borough Career Extension Center last fall, 60 students who previously were dissatisfied with their school life have found an equilibrium between work and study.

The Career Extension Center's work-study program allows high school age students to hold down a full or part-time job, receive extensive training in a career and continue with their school curriculum.

Most of the students involved in the work-study program had previously quit or were contemplating dropping out, but with the new arrangement they can complete school at their own pace while holding down a job.

According to Jerry Morang, work experience coordinator, 34 local businesses and agencies are involved in training the students. Jobs range from teacher aides to store clerks to research assistants. All but five of the jobs are paying.

In several cases, students have landed specialized jobs that will insure them employment after graduation.

Sheldon Driggs, a native student who left Lathrop High School, is enrolled in an intensive laboratory training program under tutorship of the Arctic Research Lab. He is currently training in the water and air purification lab as a technician and has hopes of securing a job at

the Barrow ARL, near his home, after graduation.

Rhonda Scott spends her days as a teacher's aide at Hunter School and another Career Extension student works with the Head Start program.

Don Trounce is learning how to chemically analyze oil at the Petroleum Distribution Facility near Fairbanks. Morang said that the project's success lies mainly in the cooperation received from local businessmen. The following

Career Extension Students — The Fairbanks North Star Borough Career Extension Center has created a program which allows its students to work full or part-time and still complete their schooling. Ken Chase, above, works every day at Independent Lumber and Lance Howard, below, has learned a new trade, photoengraving, at Technical Supply in Fairbanks. The program presently supports about 60 employed students.

Research Laboratory, Penney's, Northern Commercial, Sue's Cafe, Airport Cafe, Arctic Restaurant, Traveler's Inn, Petroleum Distribution facility, Koin King Laundromat, Fairbanks Native Center, Technical Supply, First National Bank, Hope Industries, Main Jr. High School, Hunter School, Barnette School, Lathrop High School, Ryan Junior High and Mike's Sign Shop.

Also included are Hillcrest Home for Boys, Interior Airlines, Independent Lumber, Tamarac Inn, Jacyn Modeling Agency, Shoe Mart, Fairbanks Medical Center, Safeway, and Interior Credit.

businesses and agencies have provided job training stations for students: Sears, Foodland, Ft. Wainwright, University of Alaska, Market Basket, Head Start, Arctic

FAIRBANKS, ALASKA, WEDNESDAY, DECEMBER 1, 1971

Public recall about schools

Career center work lauded

About 50 persons turned out last night to praise and criticize aspects of Fairbanks' educational system, at a public work session held by the school board.

The meeting was the first of its kind held by the board, solely to hear public testimony. Board President Chuck Rees indicated such hearings would continue, probably on a twice-yearly basis.

Joe Vogler began the session by asking whether students in the North Star Borough district began the day with the pledge of allegiance, and suggested they do so. He was told many do, but saying the pledge is not mandatory. Several other speakers commented on this point also.

Two parents lauded the district's career extension center, a new program for students who have dropped out of school or became disenchanted with the traditional format.

Mrs. Ted Wolfe, 221 East Bentley Drive, said her son is "a completely different boy," and credited the center with the change. She said he intends to push for expansion of the program and felt more students should have the opportunity to be involved.

Ralph Miller told the board his daughter had "done a complete about-face" after nine years of

frustration in school and also suggested the program be expanded.

Several Lathrop High School students spoke to the board. Johnny Green said he would like to see the board work with students on additional matters, and said he felt "the board was very fair in working with the students on revision of the student policies."

Dave Anderson said he had been denied an excused seventh period at Lathrop due to a policy there requiring students to be in class or at a job, and asked the board to change this policy. He was told to contact Principal Phillip Sword to see if his schedule could be arranged satisfactorily.

Another student asked the board to consider how student moods may be affected if a 12-month school year is initiated. He indicated many students are not in the mood for studying in the summer, and not in the mood for recreation in the winter.

Other parents and community members commented on subjects ranging from the language program to parent involvement to bus transportation. Many had questions rather than comments, and several praised efforts of the newly constituted school board.

Dear Mom, today in school I learned . . .

Baking business booms at Joy

By KAREN PERDUE

It was dubbed an experiment, but it turned out more like the biggest little business boom to hit Fairbanks since election year.

The Joy Elementary students in Mrs. Paula Campbell's sixth grade class cast aside their regular roles to become bakers-for-a-day. Not only did they sell out their labors of doughnuts, cakes, cookies and bread, but reaped a profit besides.

The junior businessmen were participating in a federally-funded program to supply children with vocational information that will help them decide on a profession in later life. The government supplies books, pamphlets and guidelines for teachers to follow.

At Joy School, teachers Fran Martin and Paula Campbell picked up on the idea and shaped it to fit their classroom situation.

To become a baker is a lot of

hard work. They began with a week of intensive study of business principles. Tromping through Santa's bakery, they analyzed each phase of getting a product to market.

First they picked the recipes. That meant adapting some of the measurements to fit the demand. Carefully they recorded the prices of ingredients and then determined a fair but profitable price for each goods.

During that phase they learned the basic principles of bookkeeping, writing checks and buying wisely.

Phase II was promotion. The students set out to convince their classmates of their culinary talents with an elaborate ad campaign.

The baking day finally arrived. Teams of junior bakers, sleeves rolled up and faces beaming, turned out four kinds of bread, piles of doughnuts, three cakes and a panful of gingerbread

JUNIOR BAKERS — Sixth graders at Joy Elementary School learned about the baking profession last week when they set up shop and produced their own baked goods. Above doughnuts run the assembly line of, left to right, Larry Karella, Brian Church, Fred Williams, Jonette Cardon, Julie Foldoe and Arlene Svoboda. At bottom left, Jackie Delany stonily awaits the verdict of taster Steve Foster.

(Staff Photos)

cookies, all decorated with excruciating care.

The Joy School public soon got whiffs of the sixth graders' project and flocked to the make-shift bakery shop. Clerks rang up steady profits on the cash registers until all the goods that hadn't served as test models for the baking crews were quickly gobbled by the Joy Elementary consumers.

Mrs. Campbell estimates that the project was a great success. "Every kid was so enthused about his job," she said, "that they didn't have time to goof off. I feel they've really gained a lot."

The sixth grade teacher said that some parents had frowned on the activity as "one big play-time", but she disagrees.

Although they may not have known it, the youngsters received training in work and reading, plus some applicable knowledge about the world of business.

Mrs. Campbell plans to pursue their endeavors until the class has built an entire city, complete with a water works system. They are using the profits from this project to finance another field trip, possibly to the airport where they will board airplanes and talk to pilots and stewardesses.

Other plans for both Mrs. Martin and Mrs. Campbell's classes include experiences at a radio station and a local bank.

Aid and guidelines for this vocational program are available for every school in the North Star Borough, but so far, little other interest has been exhibited.

CAREER EXTENSION'S FIRST GRADUATE — Roxanna Wright Brooks, shown here with her two children, Tammy and Raymond, is the first to graduate with credit from Fairbanks' Career Extension Center. Looking on are two of Mrs. Brooks' teachers, Joe Tremarello and Melinda Gordon.

Career Extension Unit tells of first graduate

The pert young woman above is Roxanna Wright Brooks, wife, mother of two and the first to graduate with credit from the Career Extension Center, Fairbanks' newest school. Here, students like Roxanna work toward obtaining a diploma or taking the GED.

Roxanna, a B-plus student left school in January of 1969 (in the middle of her senior year) and came to the center last fall hoping this was the way to complete her high school education and found that it was. Here she could complete her studies at her own

pace on her own time schedule. Instruction is individualized and a strong personal relationship is developed between the staff and the student.

According to Joe Tremarello, one of Roxanna's teachers, "She not only did well academically, but was a great help in drawing out the quieter student as well."

Her English teacher notes that Roxanna has a talent for writing. "She draws much of her material from her own experience and embellishes it with her imagination."

Roxanna is not only a student, but an avid dog musher as well. She is active in the Alaska Dog Mushers Association and has raced four times in the Fairbanks area. At the end of this week, she is heading for Anchorage to participate in the Women's World Championship race there. She helps train her father's team, exercising and racing them.

And all this in her spare time, for Roxanna helps her husband, Mike, with his business, Mike's Sign Center on Noble St., and takes care of her two children, Raymond age 3 and Tammy age 1.

The new educational program for Fairbanks is commonly referred to as the Career Extension Program and is now fully in operation and soliciting help from the community.

The 60 potential high school dropouts that comprise this vocationally funded program work on academic subjects half a day and receive job training the other half day. It is felt that meaningful employment should be an integral part of these young people's educational experience if they are to realistically be made ready for the world of work. It is in this part of the program that community assistance is direly needed. Part-time employment for its students is necessary to make the Career Extension Program work.

Those interested in helping these young men and women to help themselves by providing employment or information about employment, call: Jerry Morang, Work-experience Coordinator, at 456-5559.

The Work Experience Coordinator goes into the community to find meaningful career exposure stations. In this picture he is talking to the owner of a gift shop and discussing a work contract which is drawn up for every student to fit the particulars of the job.

One of the most important aspects of the Career Extension Center school is the individualized instruction each student receives. The courses are made as relevant to life as they can be. In this picture the instructor is helping a student understand his income tax problems.

This young high school student is receiving an opportunity for career exposure in working with children in an elementary school setting.

Inter-District Conferences always entail a great deal of preparation and air travel since the distances between communities are too great to take time to drive. A number of our school district teachers and counselors have attended several career oriented career workshops and meetings throughout the Orientation - Work - Study Placement Program.

A full time counselor is on the staff of the Career Extension Center school. He gives personal, academic and career counseling, and is in charge of the Vocational Interest Surveys as well as other testing. He works closely with other counselors in the district, especially in the areas of providing career interest surveys as well as interpretation.

Orientation-Work-Study Placement Program

Fairbanks North Star Borough School District
Fairbanks, Alaska

The schools
and the community
work together
to provide students
with
career information
and
on the job training.

FILMED FROM BEST AVAILABLE COPY

Elementary Career Orientation

★ In-Service training, materials and coordination necessary to implement the Philadelphia Plan of career education in every elementary school in the district.

★ Provide the instruction and materials necessary to establish a career resource center in each elementary library.

★ Provide a clearing house for all career related material from all sources in the district. (i.e. a-v material, material in print, career speakers and career field trips.)

Secondary Career Orientation

★ A program by which students are exposed to careers related to each of their academic subjects.

★ Self-awareness and occupational exploratory courses at the junior high level.

★ A career resource center in each secondary school.

★ Vocational interest testing service.

★ Career Education in-service training for all secondary teachers.

★ Liaison service for district wide career related sources such as speaker., films and occupational exposure trips.

Research

★ Parent and employer surveys—to determine progress in behavior and academic achievement.

★ Maintain an on-going survey of local employment needs.

★ Supplement past studies of local school drop-outs with recent information and statistics.

CAREER DEVELOPMENT K-12

Teacher In-Service Training

★ Special conventions and conferences for development of career curriculum.

★ With Vocational Dept. of Education in Juneau develop university courses in career curriculum and occupational information.

★ During school year arrange for guest teacher from outside Fairbanks to help interested staff develop career curriculum.

★ Regular meetings with departments and individual teachers to expand curriculum oriented career education.

Develop Employability of Students

★ Individual programmed courses in employment characteristic development.

★ Through testing and interest surveys, students learn more about themselves in relation to chosen, realistic goals.

★ Through relating academic and vocational subjects, students are helped to attain and retain their interest in education.

★ Through counseling and on-the-job follow-up, students are helped to develop appropriate behavior that is acceptable to employers.

★ Inform students of the options open to them in relation to abilities, interests and opportunities.

Summer Program

★ Job placement and on the job training.

★ Enriched, unique experiences for students to broaden their knowledge of their environment—economically, ecologically, and socially.

★ Career counseling

★ Preparation for the High Equivalency Test.

This Orientation-Work-Study Placement Program is developed to integrate career oriented services and materials into existing counseling and course offerings. The goals are to help each student learn more about himself as well as attain career information and skills that have meaning to him.

A special emphasis is to help the potential dropout student achieve success and gain information that is relevant to him and to prepare him with the knowledge, skills and attitudes for success in the world of work.

"... education should turn out the pupil with something he knows well and something he can do well ..."

—ALFRED NORTH WHITEHEAD, 1917

INTRODUCING

A new educational program for Fairbanks which is commonly referred to as the Career Extension Program is now fully in operation and soliciting help from the community.

The 60 potential high school dropouts that comprise this vocationally funded program work on academic subjects half a day and receive job training the other half day.

It is felt that meaningful employment should be an integral part of these young people's educational experience if they are to realistically be made ready for the world of work.

It is in this part of the program that community assistance is directly needed. Part-time employment for its students is necessary to make the Career Extension Program work.

If you can help these young men and women to help themselves by providing employment or information about employment, call:

Work Study Orientation Placement Program
CAREER EXTENSION CENTER
Fairbanks North Star Borough School District

CAREER EXTENSION CENTER

1416 Gillam Way
Fairbanks, Alaska 99701

1. Each Student will be evaluated by the Job Coordinator twice Monthly and will receive a rating by his employer.
2. Unless unusual circumstances warrant a different arrangement, the number of credits received for work experience shall be determined by the number of hours worked successfully. For example:

100 hours = $\frac{1}{2}$ credit
200 hours = 1 credit
300 hours = $1\frac{1}{2}$ credits
400 hours = 2 credits
500 hours = $2\frac{1}{2}$ credits
600 hours = 3 credits

A student will not receive credit for the hours worked unless on a regular basis, he provides the Job Coordinator with some proof of continued employment.

3. It is the responsibility of all students to furnish the pertinent job information to the Job Coordinator, such as:
 - a. change of job
 - b. hours of job
 - c. working hours changed

Failure to do so could result in no credit.

4. Job Coordinator will only help those students that have appropriate dress and appearance.

All students receiving credit for work-experience will be assigned career related independent study to be completed before credit is awarded.

Date _____

CAREERS EXPOSURE CONTRACT

Student Name _____
Exposure or Training Station _____
Training Title _____
Hours & Extent of Exposure _____

In an attempt to make in-school activities more relevant and to assist students in having opportunities to explore various careers it is proposed that the above named student be released from part of the school day to receive on-the-job career exposure. This training is to be equivalent to the regular school credit on the basis of one-half ($\frac{1}{2}$) credit per 100 hours of exposure with a maximum of three credits per school year. The maximum time at any single exposure station will vary according to circumstances but will not exceed 300 hours. Upon reaching that limit the student will be placed in another career exposure station or the existing one will be converted to a training position subject to a new contract.

It is understood that experience received is to be an integral part of the students educational process and he will be responsible to both school and the on-the-job supervisor and the following criteria must be met:

- (a) Maintain satisfactory standing in the employment setting as evaluated by the supervisor.
- (b) Maintain satisfactory standing in the academic areas pursued within the in-school phase of the program.
- (c) Complete career exploratory assignments relating to the training as designated by teachers and counselors.
- (d) Maintain weekly contact with the counselor or career consultant to discuss exposure experience.
- (e) Complete the following objectives as designated by counselor, career consultant and job supervisor:

(List of specific behavioral objectives to be met)

SUMMARY OF RESULTS OF CAREER EXTENSION CENTER QUESTIONNAIRE
PREPARED AND ADMINISTERED BY
PARENTS OF CAREER EXTENSION CENTER STUDENTS

1. What are your feelings about your child attending the career Extension Center? (Good - Indifferent - Dislike)

<u>97%</u>	Good	<u>0%</u>	Dislike
<u>3%</u>	Indifferent	<u>3%</u>	O.K.

COMMENTS RECEIVED: "This is the best schooling he has ever gotten." "I think it is a big help or the young people." "The very best." "Very good." "Guess its O.K." "Would not be in school otherwise." "Fine youngsters choice was'nt getting what needed at Lathrop."

2. What was your students attitude toward school last year? (Good - Indifferent - Unsatisfactory)

<u>15%</u>	Good	<u>62%</u>	Unsatisfactory
<u>18%</u>	Indifferent	<u>5%</u>	No Answer

COMMENTS RECEIVED: "He only went half the year." "He had gone to another state and still didn't like it." "Did not like to attend certain classes." "Never liked school." "Good she did real well." "Missed alot of school." "Unable to fit into regular school situation." "Unsatisfactory at Lathrop first semester fair in Anchorage." "Unknown."

3. What is your students genersl attitude toward school this year? (Good - Indifferent - No Change)

<u>85%</u>	Good	<u>3%</u>	No Change
<u>6%</u>	Indifferent	<u>6%</u>	No Answer

COMMENTS RECEIVED: "Better than 'Good'." "He likes to go now." "Better." "Improvement - MUCH." "Some days good some days bad." "Really likes the school." "Goes in spurts - Works 8 hours day-gets tired." "Very good." "Taken on responsibility himself in following through." "Attitude once shes there is good-- no discipline herself." "No change - can cope bet.er." "Problem at Lathrop - learns quick and felt held back."

4. Does your student attend school more regularly than in the past? (Yes - No - Do not know)

<u>85%</u>	Yes	<u>0%</u>	Do Not Know
<u>9%</u>	No	<u>6%</u>	No answer

COMMENTS RECEIVED: "She attended regularly before." "Definately." "Enjoys going." "Yes - a lot more - very willing." "Has no self-discipline - needs guidance by others than his parents." "No better." "Yes does now." "Last year orced - this year looks forward to attending." "Enjoys being teachers aid."

Questionnaire (continued)

SUMMARY OF RESULTS OF CAREER EXTENSION CENTER QUESTIONNAIRE
PAGE TWO

5. Does your student attend school more willingly than in the past?
(Yes - No - Do not know)

100% Yes 0% Do not know
0% No

COMMENTS RECEIVED: "Yes we have no problems now." "Enjoys it when she gets there." "Yes -- but more determined."

6. Indicate change of attitude in the following areas:

School	(Improved - No change - Worse)				
<u>97%</u>	Improved	<u>3%</u>	No change	<u>0%</u>	Worse
<u>0%</u>					No answer
<u>Family</u>	(Improved - No change - Worse)				
<u>62%</u>	Improved	<u>26%</u>	No change	<u>3%</u>	Worse
<u>9%</u>					No answer
<u>Adults</u>	(Improved - No change - Worse)				
<u>65%</u>	Improved	<u>26%</u>	No change	<u>0%</u>	Worse
<u>9%</u>					No answer
<u>Students</u>	(Improved - No change - Worse)				
<u>56%</u>	Improved	<u>32%</u>	No change	<u>0%</u>	Worse
<u>12%</u>					No answer

7. Should the Career Extension concept be (Continued - Expanded - Dropped)?

<u>50%</u> Continued	<u>0%</u> Dropped
<u>35%</u> Expanded	<u>15%</u> Continued & Expanded

COMMENTS RECEIVED: "I think it should expand all it can." "Very definitely." "Expanded if possible." "Does not like S.F.O. program --many problems." "The school should be expanded-- but not to one large building. It would lose what it has gained by not having the closeness of student teacher." "Expand-- very good idea." "Possible expand definitely keep it." "Have to have this for certain students." "Expanded more kids could go." "Do not expand unless adequately staffed." "School should be for students who do not fit the norm-- not for everyone who just likes the freedom." "Felt they were domineering at Lathrop-- likes the pace he can work at the Career Extension." "Best thing that's happened to our school system."

8. Should the physical plant be changed? (Expanded - Adequate - Improved)

<u>50%</u> Expanded	<u>6%</u> Expanded/Improved
<u>24%</u> Adequate	<u>6%</u> "No comment"
<u>6%</u> Improved	<u>8%</u> No answer

COMMENTS RECEIVED: "Bigger: We would like for them to have more."
"Hadt'n seen plant -- no comment." "Probably present success due
partially to non-formal building." "Not familiar with program."
"It isn't as big as it could be." "Accommodate more students."
"Could use more room." "Perhaps expanded at later date." "Made
available t more kids." "Don't ask me to much -- may drop it. As a
parent I am satisfied." "Don't get too big!" "Small classes
with students moving on is best situation." "no comment."

SUMMARY OF RESULTS OF CAREER EXTENSION CENTER QUESTIONNAIRE
PAGE THREE

ADDITIONAL QUESTIONS AND/OR COMMENTS: "If--- could get more help with his Algebra he would be more interested even than he is now. He passed all the other tests that are required for the GED test." "--- has had mono since December. Plans to return." "This is the first time our son has had any desire to learn or work towards a diploma. He speaks very highly of every one at the Center that has been working with him." "My husband and I both believe that the Career Extension Center is a worthwhile project, and we are grateful to the fine people who are giving this time and effort to help our children." "Working after school. Working summer." "Age 16, Father has summer job for son if he wants to work for Father. Be glad to help if needed." "Summer school should be offered if there are enough students who really are going to attend on a daily basis." "--- has nothing but praise for the teachers and school." "Doesn't have to lie this year." "We feel it is one of the exceptional federal projects in Fairbanks. We feel if it wasn't for the Career Extension Center educations and counselors our son would not be attending school." "Seems to work better for --- being able to go at her own pace." "Hope the school confines enrollment to kids who can't make it at Lathrop and not open to kids who like this system of education better but can succeed at Lathrop." "Has helped him grow up -- he listens to us and we to him. Has learned to fit in. Career Extension has done more for my son in 5 months than Main and Lathrop did in three years." "Would like to know when daughter is attending school -- attendance records?" "This opportunity is almost too late for --- but had it been available two years ago it would have saved heartaches and a lot of built-up hostility towards authoritarian people and structures. We, his parents, are very grateful to those who worked to bring the Career Extension concept of education to Fairbanks. Having the pressure of Lathrop's necessary regulation's off -- has aided all the family to deal more effectively with his real problems which isn't smoking!" "Demand more from students. Most of them are lacking in self-discipline and need to be led into better working habits. Set certain attainable goals for students and then insist on compliance." "Seems very eager to attend. Friendliness of teachers; seems so willing to help him--." "--- is staying with Aunt and Uncle and was living in the Bush prior. Correspondence school. Due to working hours of all the family difficult to determine family improvement - attitude - but feels a definite change in the few weeks in the school." "Like atmosphere -- it's very encouraging -- feel more at ease with themselves." "Asked what the feeling was about the program as far as School Board -- she is very much in favor of the school and hopes it will continue in the future."

NOTE: SOME OF THESE COMMENTS WERE RECORDED BY INTERVIEWS WHO VOLUNTEERED TO CALL SOME PARENTS AND GUARDIANS WHO HAD NOT COMPLETED A QUESTIONNAIRE BEFORE.

SUGGESTIONS:

Too hard?
Too boring?
Pregnant
Married
Not learning anything
Skipped to often
Needed to work for money
Didn't like the teachers
Didn't like the rules
Just a bad feeling
Felt "dumb"
Can't read very well
Health
Frustrated with school in general
Frustrations and problems at home
Felt out of place
Teachers too far ahead and moving too fast

Use space below & on the back to explain your feelings about your past experiences in school. You can check or circle suggestions at the left that describe your feelings.

APPENDIX C

CAREER INQUIRY

Career Inquiry is a 1/2 credit course which was developed to facilitate the preliminary procedures used by employers when hiring new personnel. The procedure used to obtain unemployment insurance is included along with the rationale involved. Monographs of the major work areas are provided for student oriented projects.

OBJECTIVES

1. Each student will be required to write and complete the following:
 - A. A self-inventory worksheet
 - B. Three personal references and addresses
 - C. Three hobbies
 - D. Four courses which may be pertinent to a job application
 - E. Six possible sources for finding a job
 - F. A federal application
 - G. A state application
 - H. Four subjects to be avoided while being interviewed
 - I. Eight questions a prospective employer may ask
 - J. Ten reasons why job applicants may be rejected
 - K. Three areas open to prospective employees with court records
 - L. Three areas not open to prospective employees with court records
 - M. The rights and responsibilities of a union member
 - N. Five situations which may seem unusual the first day on a job
 - O. An unemployment insurance claim form
 - P. An "Intrastate Benefit Rights Questionnaire"
2. Each student will be required to participate in a mock interview session with the instructor, with emphasis placed upon the development of self-confidence.
3. Each student will be required to take the Strong Vocational Interest Survey or the Ohio Vocational Interest Survey.
4. Given the Occupational Exploration Kit (O.E.K.), the student will be required to complete the workbook.
5. Each student will be required to research four work interest areas provided in the O.E.K.
6. Given an "Occupational Monograph" provided by the instructor, the student will be required to use the local library to research one occupation of his choice.

CAREER EXCHANGE PROGRAM
LATHROP HIGH SCHOOL

Dear Parent:

In an attempt to make in-school activities more relevant and to help students have opportunities to explore the World of Work, the following pilot program in career exposure is proposed. Jack has expressed a desire to participate in this program which is dependent upon your active cooperation.

The basic idea is an exchange program with you and another parent whose son or daughter is a participant. Your willingness to participate will make it possible for Jack to have an option on taking an active part.

The program is for Jack to be a guest of another working parent at his job. The period of time would be for one half day for three to five days, with an option on whether part to break the contract at the end of three days. The time of day could be altered so the least amount of disruption in the student's studies would exist. Your role would be that of a host to one of the students whose father is assisting Jack in becoming acquainted with his career.

The purpose in having the student be a guest for a three to five day period of time is so the student may closely experience the career. This length of time also provides an opportunity for you to express concepts that might not be mentioned in a short interview.

Enclosed you will find a list of questions that will be asked of Jack. There is also a list of guidelines for the student concerning their regular schooling. Last is a questionnaire that is needed for information concerning your attitudes toward this idea and information concerning your career.

Thank you for taking the time to read this letter and responding to the questionnaire. If in any way I can be of service to you or answer any question that Jack has not been able to answer, please call me in the evenings at 456-7081.

Thank you,

C-3

CAREER EXCHANGE AGREEMENT

Exchange

Parent _____

Student. _____

1st day. _____ Time _____

2nd day. _____ Time _____

3rd day. _____ Time _____

4th day (Optional). . . _____ Time _____

5th day (Optional). . . _____ Time _____

1. The parent agrees to demonstrate his vocation and assist the student in becoming acquainted with his vocation.
2. The student agrees to attend the vocation during the designated times and prepares himself to respond to the questionnaire.
3. The parent and student agree to meet on the first three days of the five days with the understanding that either may request termination upon the third day. If neither request termination on then completion of the final two days is expected. Termination may be expressed orally to the instructor and the other party involved.
4. Both parties agree to complete the questionnaire at the conclusion of the observation period.
5. The student agrees to complete all regularly scheduled assignments in all classes which conflict with the observation.
6. The parent and student agree to resolve any transportation problems which occur.

OBJECTIVES OF STUDENT OBSERVATION OF PARENTS IN OCCUPATIONS

1. The student will state the characteristics of the vocation as perceived by the student before the observation by answering a questionnaire.
2. The student will state the characteristics of the vocation as perceived by the student after the observation by answering a questionnaire.
3. The student will state at least three mathematics problems in which they have had the mathematical background to solve.
4. The student will state whether there are any mathematical problems associated with the vocation which they at present do not have the background to solve.
5. The student will state the difference in the anticipated occupation and the perceived vocation by observation.
6. The student will state the characteristics of the vocation which are most appealing to him.
7. The student will state the characteristics of the vocation which are the least appealing to him.

 which have the mathematical background for a
 high school student.
19. State three problems which have a college level of
 mathematics requirement.
20. What level of education does your vocation require?
21. Would you participate in this program again if given
 the opportunity?
22. What suggestions do you have to improve thr program?

C-7

OUTLINE TO ROOM TO GROW PROGRAM

TEACHER GUIDED PROJECTS

- I. ORIENTATION
Orients pupil to aims of the program.
- II. MEANING OF "ROOM TO GROW"
Assists the pupil to understand the relations and the influence of home and school on the person and his career
- III. WHO AM I?
Encourages feeling of self-awareness and self-worth
- IV. WHAT I LIKE TO DO IN MY FREE TIME
Continues to strengthen the self-concept by stressing the individuality of the person
- V. WHAT I WANT TO BE
Encourages the pupil to express his career hope
- VI. ROLE PLAYING INTERVIEW
Helps the pupil to discover his level of aspiration and his doubts about himself and the future
- VII. INTER-RELATEDNESS OF WORK
Helps the pupil to understand that there are many ways to regard the value and worth of an occupation
- VIII. JOBS IN SPECIAL SETTINGS
Helps the pupil to delve more deeply into information about jobs in which he may be interested.
- IX. JOBS AND EDUCATION
Encourages the pupil to delve more deeply into information about jobs in which he may be interested
- X. WHAT IS SUBJECT SELECTION?
Prepare the pupil for the process of subject selection
- XI. ABOUT ME
Encourage the pupil to express his ideal self
- XII. SUCCESS IN YOUR WORK
Presents, through the use of slides, a variety of jobs in the "World of Work"
- XIII. EXPLORING THE WORLD OF WORK
Helps the pupil to explore the variety of jobs in the "World of Work" and relate jobs to self
- XIV. EVALUATION
Helps the pupil to evaluate what he has learned

Room to Grow (continued)

ROOM TO GROW is a career guidance program for children ages nine to twelve. The children in this age group, commonly referred to as "later childhood"; are in a period of comparative serenity. They are eager to learn; their interests are expanding into other parts of the world; they want to learn about things that are "real and true"; above all, this is a period in which the child delights in discovery. This period of unselfconsciousness lends itself to a beginning stage in career development.

Interest in career development begins early in life. The experiences of childhood set the stage for later vocational decision making. Vocational choice is not a single choice, "an event in time", but a series of choices which are made as the individual passes through various stages of his development. Vocational development is seen by Super¹ as an implementation of a self-concept, by Havighurst² as achieving an ego involving job and by Roe³ as related to personality differences which are rooted to a considerable extent in childhood experiences. A person's career pattern has many determinants- his family, socio-economic level, mental ability, sex role, personality characteristics, and the opportunities to which he is exposed.

This view of career development gives direction to ROOM TO GROW. Experiences are provided which give more attention to the elementary school child's perception of himself and the image of the person he would like to become. Also, much attention is given to the various conditions which operate either to expand or to restrict the child's career pattern and his range of choices. These conditions are:

1. Family Attitudes and Values

Children, as Super¹ has written, begin to acquire attitudes and values early in life, first from their parents and then from their peers in the neighborhood and school. Since vocational preferences are attitudes toward work and toward occupations, it follows that children who identify with their parents and their subculture, early begin to develop preferences for the types of occupations which their parents value.

¹Super, Donald, The Psychology of Careers, New York: Harper and Brothers, 1957

²Havighurst, Robert J. "Youth in Exploration and Man Emergent," in Man In A World Of Work, edited by Henry Borow, Boston: Houghton Mifflin Co., 1964

³Roe, Anne, The Psychology of Occupations, New York: John Wiley and Sons., 1956

2. Socio-Economic Conditions

The child's percept on of work may be complicated by the work roles he sees around him. The middle-class child may come to feel that he has to succeed at a white-collar job to satisfy his parents' ambitions. On the other hand, children from low income levels may have no suitable occupational role models in the family, and few family activities related to their aspirations. If they aspire to occupations which are above those of their parents, they are dependent upon exceptional relatives, upon the school, and upon such sources as fiction, movies, and television for information as to what it is like to get a higher education or to work as a city planner.

3. Educational Expectations

The relation of education to the level of motivation in the society is very direct. John Gardner¹ has said that the goals the young person sets for himself are very heavily affected by the framework expectations of his society. If much is expected of him, the chances are that he will expect much of himself. The school can create a climate where the child can dare to aspire to achieve his ideal self.

4. Development of Self-Concept

As a child grows he learns what he can and cannot do in large part by his contract with the significant people in his life. He also begins to develop his concept of self through his experiences and identification with various adults. As he grows older, the child looks to those outside his family for models of what he can do and should do to cope with the world.

No one expects children to make decisions about vocations before such choices should or must be made. But this does not mean that the early fantasy choices made in childhood do not have value. Although early choices are usually in a fantasy stage, the teacher's response to the child's announced career hope is likely to affect the child's self view.

Teachers and parents can be particularly helpful in assisting and encouraging children in career exploration. First, they can help by supporting and encouraging a child's fantasy choices. An example of this is Carmella, a fifth grade child, who definitely said to her mother, "I want to ask you a question and I hope you won't be angry." Carmella's mother assured her

¹Gardner, John S., SELF RENEWAL, New York: Harper and Row, 1963

Room to Grow (continued)

that she could ask her any question. Then Carmella looked up, still fearful, and asked, "Would you be angry if I became an archeologist?" The mother's reply was, Carmella see herself as a successful person.

General Program Description

The program recommends a series of twenty-six to thirty guidance projects within the school year. Of the total number of projects, nine or ten suggested as teacher-led group activities. Fifteen or more can be used for guest speakers representing particular occupational categories and several may be trips for the purpose of seeing people at work or students in higher level schools or colleges preparing for careers.

The guidance sessions may last from thirty minutes to an hour and a quarter depending upon attention span, interest, and needs of a particular group of children.

Guidance Sessions with Teacher

A. General Objectives

1. Awaken in the child a sense of excitement and hope about himself and his possibilities as an adult.
2. Use the child's innate curiosity and delight in discovery to help him develop a healthy self-concept.
3. Provide experiences through a variety of activities that enable the child to expand his vocational and occupational preferences
4. Develop a desirable approach to the process of career choice.

B. Content of Guidance Sessions with Teacher

The first five sessions are used by the teacher to define the program, establish its purpose, and encourage the child to express his career hopes. Other sessions with the teacher are interspersed throughout the series.

These sessions should be regarded more as projects. The time allotted for any one project may cover two to four meetings with the children. Consideration should be given to integrating each project with other learning activities in your classroom.

Career Extension Center
Activities for Grade 6

Careers Dependent on Nature

- A. Purpose: The learner will discover that a raw material from nature is responsible for a large chain of occupations. He will also become more concerned with ecology, and the dependence we all have on our natural resources.
- B. Materials: No special material needed.
- C. Activity: Let each student select a natural resource, such as coal, oil, tree, limestone, copper, salt, granite, etc.. Through research, he can find a large variety of finished products made from the resource, and the various occupations that are dependent upon it.
- D. Variations: The student could list the finished products and the occupations that would be eliminated if a particular resource were no longer available.

CAREER QUIZ GAME

- A. Purpose: To expand the learners knowledge of the hundreds of careers involved with common resources.
- B. Materials: Paper and pencil, or oral
- C. Activity: The teacher will tell the class a word representing a natural resource. The students will either write or give orally a list of occupations involved with that resource.
- EXAMPLE: Teacher, "tree"
Student, "logger, tree farmer, nursery man, log truck driver, scaler, orchard farmer, fruit picker, etc."
Teacher, "wheat"
Student, "seed store man, farmer, miller, baker, wallpaper hanger, spaghetti maker, etc."

Tools of the Trade

- A. Purpose: To arouse an interest in careers through the tools associated with many occupations.
- B. Materials: A variety of pictures of tools, implements, equipment, associated with various trades and occupations.
- C. Activity: Allow the learners to identify an occupation by viewing those things we identify as belonging to the occupation.

Carpenter

saw
hammer
square

Mason

trowel
level
mason's hammer

Butcher

apron
cleaver
knife

Career Extension Center
Activities for Grade 6

Class Newspaper

- A. Purpose: The learners can become familiar with many of the careers involved in the production of a newspaper.
- B. Materials: This will vary with the resources available. A typewriter, and a means of reproducing copies are almost essential.
- C. Activities: Gathering news, writing, illustrating, advertising, layout, editing, printing, and distribution are all necessary jobs to be done. This activity can be a one issue newspaper or a continuous class activity.

Vocabulary - Kinds of Houses

- A. Purpose: This activity is designed to extend the concept of "house" and to help build vocabulary used in the construction business.
- B. Materials: If available pictures from home building plan books, magazines, or newspapers of the different types of houses.
- C. Activity: Tell the children you are going to take them on a imaginary house tour. Explain that there are many different types of houses. Say: "There is a split-level house. What kind of house would a split-level house be?" (discuss)

Continue with:

ranch style house	duplex
two-story house	bunk house
apartment house	Penthouse
town house	split-entry house
hotel	bungalow
motel	triplex

ALL Jobs are Important

- A. Purpose: Children must learn to understand that work of all people is important.
- B. Activity:
 1. List in order of importance (as you see it) the following jobs: stenographer, postal clerk, truck driver, refuse collector, bus driver, typist, credit manager, electrician, plumber, heavy equipment operator. What measure did you use to try to rank them?
 2. Organize a debate about the merits of (assume equal qualifications) bus driver vs. truck driver.

Career Extension Center
Activities for Grade 6

What's My Line?

- A. Purpose: To become acquainted with a variety of occupations through the participation in this popular quiz game.
- B. Materials: None essential
- C. Activity: Twenty questions requiring yes or no answers are allowed the group to discover the occupation assumed by the "Unknown worker". Whoever guesses the occupation is the next "unknown worker".

Comparing Container Values

- A. Purpose: The learner will become aware of capacity differences in various commercial containers and compute prices per unit.
- B. Materials: Tin cans, boxes, baskets, jars, etc., of various sizes and shapes.
- C. Activities: Learners will compute prices per unit in a variety of containers which are priced by the teacher to find the best value.

Careers From Start to Finish

- A. Purpose: The learner will discover the occupations involved in the many steps a raw material goes through before it is ready to sell to the consumer.
- B. Materials: A newspaper and a box of ready to eat cereal.
- C. Activity: The students will find the current price of the grain used in the cereal. This is found in the "commodities" section in the newspaper, and priced by the ton. From this price a computation is made of the initial cost of the grain in the cereal box. The students will now do some research to discover why there is such an increase between the original cost and the final selling price. The student will discover many occupations involved in this process.
- D. Variation: A similar exercise can be done with any number of raw materials and finished products, such as the cost of steel and a pair of pliers, or the cost of clay and a set of china.

C-14

"CAREERS EXPOSURE" GUIDELINES FOR COUNSELORS

General

To make in-school activities more relevant to students who might otherwise drop out and to help students who have had few opportunities to experience the real work world, a course has been developed termed "Careers Exposure". This will allow selected students to utilize community resources in exploring careers that correlate with their particular interests and aptitudes.

Credit and Length of Time

Basically, a student enrolled in Careers Exposure will spend two to three hours in structured activities in a business or agency within the community. Students will receive elective high school credit for this on the basis of one-half ($\frac{1}{2}$) credit per 100 hours on the exposure station. A maximum of three credits can be earned in Careers Exposure in the high school educational program. Since the major objective of this activity is to provide intensive exposure to a variety of careers, the length of time at any one station need not be extensive. The time at any single exposure station will vary according to circumstances but will not exceed 300 hours. Upon reaching that limit the student will be placed in another exposure station, fed back into the regular curriculum or the existing station will be converted to training position subject to a new contract.

Grades, Participation/Contract

Students in grades 9-12 will be eligible for Careers Exposure. The selection or determination of students most applicable for these activities will be the responsibility of the counselors. Counselors, through their contact with the students, will also be instrumental in determining the particular career exposure most beneficial in each case. The actual placement in business or agency and the periodic follow up necessary will be the duty of the Career Consultant assigned to that school. The consultant will also be responsible for the necessary paperwork and arrangement of the contractual agreement between school, student and employer. The contract will contain general stipulations common to all students taking careers exposure as well as a list of the behavioral objectives specifically applicable to each placement. These objectives will be tailored according to student needs and the facets available in the exposure station.

School Day

For credit to be awarded for Career Exposure the time spent on the job must be during the normal school day. The exact times being dependent upon the students academic schedule. A maximum of three hours per day can be allotted for these activities with a minimum time allowed of two hours per day. The Career Consultant will be responsible for grading of this activity based upon employer reports and counselor input.

"Careers Exposure" (continued)

Wage

Monetary compensation is not a consideration in this contact. Experience gained and credit awarded is considered sufficient reinforcement as long as the student - employer relationship is one of exposure and not production.

Number of Students

The maximum number of students to participate in this program will be thirty from each of the schools containing high school students unless otherwise mandated by the administration of those schools.

Transportation

Transportation other than that provided by normal school bussing will be the responsibility of the students and their parents. A student will have to show proof of adequate transportation to and from school exposure station and home before a placement is made.

Parents

The parents of each student participation in Careers Exposure must be advised of the program and its' objectives, and must be in total agreement with the plan for their child. It will be the responsibility of the Career Consultant and the counselor to bring about total awareness on the part of the parents and to insure their input into the program.

"CAREERS EXPOSURE" GUIDELINES FOR EMPLOYERS

To make in-school activities more relevant to students who might otherwise dropout and to help students who have had few opportunities to experience the real work world, a course has been developed termed "Careers Exposure". This will allow selected students to utilize community resources in exploring careers that correlate with their particular interests and aptitudes.

The Careers Exposure plan of placing students in a working relationship with individuals or organizations is based on the premise that so exposing them will ultimately aid them to choose a life work. It is neither proposed nor held that so exposing them will give them training which is more than basic. Rather, it is advanced that such exposure to any line of work. It is further proposed that an exposure station will in no way alter the number of employees a firm or agency may have.

Basically, a student enrolled in Careers Exposure will spend two to three hours in structured activities in a business or agency within the community. Students will receive elective high school credit for this on the basis of one-half (1/2) credit per 100 hours on the exposure station. A maximum of three credits can be earned in this manner in any one school year and a maximum of six credits may be earned in Careers Exposure in the high school educational program. Since the major objective of this activity is to provide intensive exposure to a variety of careers, the length of time at any one station need not be extensive. The time at any single exposure station will vary according to circumstances but will not exceed 300 hours. Upon reaching that limit the student will be placed in another exposure station, fed back into the regular curriculum or the existing station will be converted to a training position subject to a new contract.

A contract will be drawn up between student, school and employer for the purpose of integrating the career experience with the school process and to allow the awarding of credit. The prime responsibility of the employer or career exposure supervisor is to provide a work orientation experience of as broad a magnitude as possible. An example would be a young lady requesting exposure to medical careers. A clinic administrator may arrange for the girl to spend two weeks in each of ten different medical settings within the clinic. The goal being to allow the girl to develop a realistic picture of the various jobs involved within the medical profession.

Since, under this type of arrangement, a student will seldom be a productive part of a business, monetary compensation is at the option of the employer. Some employers do, however, pay students a training wage for orientation type experiences.

It is with the cooperation of local businesses and agencies that the educational curriculum can be supplemented and can indeed be made meaningful to high school students. As businessmen have known for a long time and as educators have come to find, education does not all come from the classroom but is, in fact, very dependent upon community resources.

OCCUPATIONS; INCOME; TABLES (DATA)

ABSTRACT - THIS STUDY PRESENTS STATISTICAL
DATA GATHERED IN A SURVEY OF FEMALES EMPLOYED
IN FULL-TIME FEDERAL CIVILIAN WHITE-COLLAR
JOBS IN THE U.S., TERRITORIES OF THE U.S.,
AND FOREIGN COUNTRIES. THE DATA ARE PRESENTED
IN SEVERAL TABLES REFLECTING EMPLOYMENT BY:
(1) GENERAL SCHEDULE AND EQUIVALENT GRADES,
(2) SPECIAL OCCUPATIONAL CATEGORIES, (3)
OCCUPATIONAL GROUP, AND (4) SELECTED
AGENCIES. SINCE THE LAST SURVEY, THE TOTAL
NUMBER OF FULL-TIME WHITE-COLLAR WOMEN SHOWED
A NET DECREASE OF 7,067. THEY NOW REPRESENT
33.2 PERCENT OF THE TOTAL WHITE-COLLAR
WORKFORCE (1,981,722) AS COMPARED TO 33.4
PERCENT IN OCTOBER 1969. ALL OF THE NET
DECREASE MAY BE ATTRIBUTED TO LOSSES IN
GRADES 1 THROUGH 6 AND THE EQUIVALENT, WHILE
WOMEN IN GRADES 13 AND ABOVE INCREASED 6.6
PERCENT. THE GENERAL ADMINISTRATIVE,
CLERICAL, AND OFFICE SERVICE GROUP CONTINUES
TO BE PREDOMINATED BY WOMEN, ALTHOUGH THE
NUMBER OF WOMEN IN THE GROUP DROPPED
SLIGHTLY. AVERAGE SALARIES FOR WOMEN (\$7,727)
WERE SIGNIFICANTLY LOWER THAN FOR MEN
(\$10,981). THE HIGHEST SALARIES PAID TO WOMEN
WERE IN THE VETERINARY MEDICINE SCIENCES
(\$14,866) AND COPYRIGHT, PATENT, AND
TRADEMARK (\$14,573). (SB)

HIGHLIGHTS

- ° The total number of full-time white-collar women showed a net decrease of 7,067 since the last survey. They now represent 33.2 percent of the total white-collar workforce (1,981,722) as compared to 33.4 percent in October 1969. During the same period, the number of men remained virtually unchanged (down 103 to 1,324,395).
- ° All of the net decrease in the number of women may be attributed to the losses in grades 1 thru 6 and the equivalent. At the other end of the continuum, women in grades 13 and above increased by 470 (6.6 percent) to 7,539. This compares with an increase of 3.6 percent in the number of men in these grades.
- ° Slightly more than 55 percent (1,093,337) of all white-collar employment were in positions in grades 1 thru 6. Thirty-five percent (690,500) of the white-collar workforce were reported in the intermediate grades (7 thru 12) and the remaining 10 percent in the upper level grades (13 and above). Women comprised 46.1, 20.7, and 1.7 percent, respectively, of the previously mentioned grade groupings.
- ° For the most part, the median grade structure of the white-collar workforce remained the same as last year. The median grade was higher for women than for men in only two occupational groups: Medical with 7 for women and 6 for men; and Miscellaneous with 6 for women and 5 for men. These are the same two occupational groups in which the median grade for women in 1969 was higher than for men. The median grade in the Library and Archives group showed a significant shift upward for men. This year, the median grade for men was 9 and 7 for women as compared to a median of 7 for both men and women in the 1969 survey.
- ° The General Administrative, Clerical, and Office Services Group continues to be predominated by women. However, the percentage of women in the group dropped slightly to 68.9 percent or 309,533 out of the total 449,057 since last year. Also a small decrease was reported in the number of women in the lower grades in this group. Last year, slightly more than 87 percent of all women were in grades 1 through 6, while this year, the number dropped to 86 percent.
- ° Average salaries for women were significantly lower than for men -- \$7,727 compared with \$10,981. The highest salaries paid to women were in the Veterinary Medical Sciences (\$14,866) and Copyright, Patent, and Trademark (\$14,573).

STUDY OF EMPLOYMENT OF WOMEN IN THE FEDERAL GOVERNMENT

1970

INTRODUCTION

This study presents statistical information on full-time Federal civilian white-collar employment. 1970 data are compared with that collected in 1969. Both surveys, conducted by the Civil Service Commission, provided for submission by the Federal agencies of comprehensive reports showing full-time employment by agency, grade or salary equivalency, and occupational series as of October 31.

COVERAGE

The data presented in this study are representative of full-time white-collar Government employment (General Schedule Classification and other non-wage systems) worldwide. Excluded are employees of the Board of Governors of the Federal Reserve System, members and employees of the Congress, employees of the Central Intelligence Agency and the National Security Agency, and foreign nationals employed overseas. In 1970, as in 1969, data were collected for four major geographic areas only. They are: (1) the Washington, D. C., metropolitan area^{1/}; (2) United States (i.e., the 50 States) excluding the Washington, D. C., metropolitan area; (3) Territories of the United States; and (4) Foreign Countries.

PRESENTATION AND UTILIZATION OF DATA

Throughout this publication, occupational groups and occupations within groups are those provided for in the Handbook of Occupational Groups and Series of Classes, published by the Civil Service Commission. The exception to this coverage is the Postal Operations Group, encompassed within the single agency Postal Field Service system, which is provided for in the Personnel Handbook, Series P-1, published by the Post Office Department.

The grade distribution data shown in Tables B, C, and D, represent "grades or levels" of the various pay systems considered equivalent to specific General Schedule grades. For those positions not under the General Schedule (GS) pay system, grade equivalency was derived by comparing the GS salary rates with the corresponding salary rates in other pay systems.

^{1/} The Washington, D. C., metropolitan area includes: the District of Columbia; Montgomery and Prince Georges counties, Maryland; the cities of Alexandria, Fairfax, Falls Church, and the counties of Arlington, Fairfax, Loudoun, and Prince William, Virginia. Loudoun and Prince William counties were included as of July 1967.

Data for employees whose annual salary rates are above the General Schedule (e.g., Executive Pay Act, and some Public Law type positions) are identified in the tables as "ABOVE 18". Employees for whom no grade or salary was reported are identified as "UNGRADED". For the most part these are in the Judicial Branch, representing support staff to the Federal judges and courts throughout the United States. All "grades or levels" are listed even though there may be no employment in some instances. Annual salary rates paid under the General Schedule for 1970 and 1969 are shown in the salary table at the end of this publication.

Utilizing the previously described grade equivalencies, occupations within the various pay systems have been classified according to three major categories. These categories, presented in Tables E and F, are based on the level of work performed and are defined as follows:

Category III - Positions in occupations (primarily professional, technical, or administrative at "grade or level" 5 and above) requiring at the entry level:

- (a) baccalaureate or higher education; or
- (b) equivalent professional, technical, or administrative experience.

Category II - Positions requiring specialized education or experience:

- (a) technician positions primarily at "grade or level" 4 and above requiring either specialized experience or specialized education above the high school level; or
- (b) clerical, aid, or support positions above the entry levels requiring specialized experience or education.

Category I - Positions requiring minimal specialized education, experience, or skill:

- (a) primarily entry level clerical, aid, and support positions "grade or level" 3 and below; or
- (b) entry level Postal Field Service positions "grade or level" 5 and below.

Being of a widely varied nature, positions in the general series (GS-301, 501, 1001, 1701, 2001, and 2101) are assigned to the above categories on the following basis:

"grade or level" 9 and above - Category III
"grade or level" 4 through 8 - Category II
"grade or level" 3 and below - Category I

The percent of women in both columns, "Employment 31 October 1970" and "Employment 31 October 1969," represent the percentage of women with respect to total employment for each of those years (i.e., the number of women divided by the total employment for that year). With the exception of Table F, where zeros are shown, both the "Number" and "%" columns will be blank if there were no women reported.

The "Percent Change" columns reflect increases or decreases in employment for "TOTAL" and "WOMEN" from 1969 to 1970. In both cases, the base for comparisons with 1970 is the 1969 data. The percent change is computed by taking the difference between employment in 1969 and that shown in the corresponding column for 1970 and dividing by the 1969 figures. If the employment in 1970 is larger than that shown for 1969, the result will be positive and represent the percent of increase. On the other hand, if the employment in 1970 is less than that shown in the corresponding column in 1969 the result will be negative and represent the percent of decrease. A minus sign will precede the percentage when a decrease is represented. An asterisk (*) is used in either or both columns, as appropriate, when, for a particular grade or occupation there is no employment in 1969, or the number is so minute in comparison to that reported in 1970 so that the "Percent Change" is difficult to interpret. All percentages have been rounded to the nearest tenth of a percent.

Tables C and H present a comparison of employment by grade and occupational group in 1969 with that reported in 1970 within agencies. A number of executive branch agencies, each having an especially small total employment, were consolidated and are titled "OTHER AGENCIES" for use in these two tables. For the most part, these are agencies that were terminated prior to October 31, 1970, or newly established since October 31, 1969, or had a total employment in 1969 of 25 or less. These agencies, each with their total employment and the number of women, for both 1969 and 1970 are identified in Table I at the end of this publication.

A total of 1,981,722 full-time employees were reported by over 100 agencies in over 450 white-collar occupations as of October 31, 1970, of which 657,327 or 33.2 percent were women. This compares with a total of 1,989,792 employees reported as of October 31, 1969, of which 665,294 or 33.6 percent were women, thus reflecting a net decrease of 8,069 in total full-time white-collar employment (women decreased 7,967 or 7.79 percent).

The white-collar employment presented in detail in the tables that follow represents approximately 76 percent of the total full-time Federal workforce and nearly 93 percent of all full-time women employees. The following figures show the total Federal workforce, full-time and part-time:

	<u>1970</u>			<u>1969</u>		
	<u>Total</u>	<u>Men</u>	<u>Women</u>	<u>Total</u>	<u>Men</u>	<u>Women</u>
Full-time Employment	2,556,650	1,854,068	702,582	2,610,128	1,892,579	717,549
White-Collar	1,981,722	1,324,395	657,327	1,989,792	1,324,498	665,294

ABSTRACT - THE OVERALL OBJECTIVE OF THE
TUCSON MODEL CITIES EXEMPLARY PROGRAM IN
VOCATIONAL EDUCATION FOR THE ELEMENTARY AND
SECONDARY GRADES IS TO BROADEN OCCUPATIONAL
AWARENESS, INCREASE SELF-UNDERSTANDING, AND
PROVIDE JOB TRAINING AND PLACEMENT,
ESPECIALLY FOR THE ACTUAL AND POTENTIAL
DROPOUT. THE PROJECT DESIGN, WHICH INCLUDED
WORK EXPERIENCE PROGRAMS, VOCATIONAL
COUNSELING, RESOURCE PERSONS, AND COMMUNITY
INVOLVEMENT, IN A MULTI-AGENCY APPROACH, WAS
DEEMED SUCCESSFUL. A TEAM OF OBSERVERS FROM
THE ARIZONA STATE DEPARTMENT OF OCCUPATIONAL
EDUCATION CONDUCTED THE ANNUAL PROJECT
EVALUATION, INCLUDED IN THIS INTERIM REPORT.
ALTHOUGH THE PROGRAM NEEDS IMPROVEMENT AT THE
SECONDARY GRADE LEVELS, POSITIVE RESPONSES
FROM THE STAFF, STUDENTS, AND COMMUNITY IN
TERMS OF AWARENESS AND ACCEPTANCE OF THE
PROJECT WERE ENCOURAGING. "HANDS-ON"
EXPERIENCES, SKILL DEVELOPMENT CLASSES, AND
BASIC EDUCATION COURSES WERE EMPHASIZED.
STAFF EXPERIENCE GAINED DURING THIS PERIOD
WILL PROVE VALUABLE FOR FUTURE PROGRAM
ACTIVITIES, WHICH ARE BRIEFLY ENUMERATED.
EXTENSIVE PROJECT AND RESOURCE MATERIALS ARE
APPENDED. A SHORT BIBLIOGRAPHY IS PROVIDED.

Education

Attention: Exemplary Program Unit

U. S. Office of Education

Washington, D. C. 20202

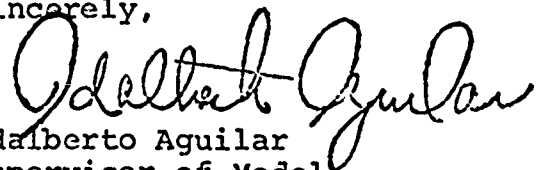

Gentlemen:

Enclosed are fifteen copies of the Annual Report
for the Model Cities Exemplary Vocational Education Pro-
gram.

We hope everything is in order. If there are any
further questions, we will be glad to answer them. The
Financial Report for the Program will soon be ready and
will be forwarded at a later date.

We appreciate your cooperation.

Sincerely,

Adalberto Aguilar
Supervisor of Model
Cities Exemplary
Vocational Education
Program

5.(a). Time Period Covered by the Report.

This report constitutes an accumulation of information gathered from July 1, 1971, through June 30, 1972.

5.(b). Goals and Objectives of the Project.

The overall objectives of the Exemplary Program is to broaden the occupational understandings of all pupils, help them to an awareness of their own potential, and train and place certain youth, particularly the actual and potential dropout, in employment. This is done in a total school environment reaching from the elementary school through the secondary level and reaches out to involve all pertinent aspects of the community. This all-embracing objective is met through a set of specific sub-objectives.

1. Intensive counseling as the core of the entire program of services in schools involved in the program
2. The use of an elementary vocational education resource person to extend the outreach aspects of the program to the elementary and junior high schools involved in the project.
3. The use, dissemination, and explanation of occupational information materials.
4. The use of industrial environmental conditions and skill development classes as work conditioners and vocational information media.
5. The use of evaluative methods to determine job aptitudes, abilities, and interests.
6. The use of cooperative vocational programs to provide actual work experience.
7. The provision of vocational educational services in a school setting and away from the normal school environment, if necessary.
8. The multi-agency approach to the problems encountered by alienated youth and youth who drop out of educational programs.
9. Work with the sub-cultures of the community to upgrade the image of occupational education.
10. Establishment of placement services to assist all youth in planning further training or acquiring employment.

11. The recruitment of recent dropouts from Model Cities area back into school and in a training program.
12. The identification and counseling of potential dropouts.
13. Utilize the facilities and personnel of the Occupational and Educational Laboratory School of the University of Arizona when necessary.
14. Cooperation with manpower agencies.
15. The formulation of an organizational structure that will articulate the vocational program within the Model City area for elementary through post-secondary students.
16. Establish procedures to facilitate employment of participants in the program when this would be advantageous.

5.(c). Procedures Followed.

The procedures followed in the implementation of the program were as follows:

1. Worked with elementary and junior high school youth through the regular counseling programs of the schools, as well as the existing faculty of those schools located in the Model Cities area. Promoted modifications deemed necessary and beneficial to such youth who, at the time of the project, were in elementary and secondary school.
2. Worked intensively with crisis prone in-and-away-from-school youth who are attending secondary school or youth who would ordinarily be in a typical secondary school population.
3. Assisted students in making adaptations through self-commitment to the most appropriate occupational choices possible with respect to their own abilities, aptitudes and interests.
4. The project team assisted faculty in determining ways in which such youth were provided with information that would be helpful in arriving at more realistic occupational choices consistent with their particular abilities, aptitudes, and interests.
5. The project coordinator, by involving resource people from the various community agencies participating in

the manpower program, such as employers, representatives from labor unions and the like, integrated these representatives into the on-going program of the project. The program coordinator also set up and supervised short-term conferences involving manpower resources, school administrators, counseling staff, and faculty.

6. The director of the project, utilizing his staff, achieved a more accurate understanding of the youth included in the project, to determine where they fit into the vocational scheme of this community.
7. Teachers participated in an organized inservice training program conducted by resource people from the local community and the University of Arizona.

5.(d). Results; Accomplishments.

Results and accomplishments of the program are accurately covered in the body of the report, 6.(d).

5.(e). Evaluation.

Evaluation of the project was conducted by a team of observers from the Arizona State Department of Occupational Education headed by Mr. A. J. Gegan. A copy of the evaluation report is included in Appendix A.

5.(f). Conclusions and Recommendations.

It is the consensus of the project staff members that the program, although wrought with unforeseen obstacles, was a success.

There are areas that need improvement and strengthening. These areas are mostly in the junior high and high school components of the program.

The community, teacher and student awareness and acceptance of the Exemplary Project was one of the most significant and rewarding factors experienced during the first action year.

Emphasis was placed in an extensive counseling guidance program, hands-on experiences in the elementary grades, skill development classes in the high school, and the provision for these participating students to take basic education courses (English, Social Studies, preparation for G.E.D. tests) and actual cooperative work experience programs.

A Site Inspection Team coordinated by the Center for Occupational Education visited our program on February 21 and 22, 1972. The Site Team consisted of the following members: Dr. Robert

Worthington, Associate Commissioner, Bureau of Adult, Vocational and Technical Education, Washington, D. C.; Ms. Mollie Shook, North Carolina State University; Mr. William Loomis, Oregon Department of Education; Mr. Archie Holmes, Minnesota Department of Education; and Mr. Richard Macer, Ohio Department of Education. The Site Team found the project to be unique in the following ways: (See Appendix B for a report copy)

1. Model Cities Coordination.
2. Subcultural emphasis.
3. Intensive work with crisis prone in-school and away-from-school youth.

6.(a). Problem Area.

The project was concerned with in-school youth and youth who were out-of-school, unemployed, and living in the attendance areas of the participating schools. The prime target was the dropout and potential dropout. Intensive work with those identified as potential dropouts channeled them into productive vocational areas; actual dropouts were motivated to return and acquire entry-level skills. Those identified late underwent an intensified program needed to make them employable.

In order to deal adequately with the in-school youth, it was necessary to have a program to serve the three basic levels: the elementary (grades 1-6); the junior high school (grades 7-8); and the high school (grades 9-12). Key elements at the elementary level were provisions for an orientation approach to careers and some hands-on experiences to increase student awareness of occupational options.

The elementary school experience evolved around career awareness and a development theme that included the total career spectrum. It included those careers that do not require a college degree, as well as those that do, and lead to the professions.

The junior high level was a continuation of career development with greater emphasis placed upon various occupational experiences. The World of Construction and World of Manufacturing were stressed in the industrial arts program.

In high school, emphasis was placed on the development of basic skills, attitudes, and general knowledge needed for gainful employment. Simulated work experiences and cooperative work experience were also utilized. The career program was developed in a manner such that it served as a non-blocking career ladder, permitting entrance and continuance at the various levels.

The present program in vocational awareness, guidance, and education and training was, to a degree, modified and expanded at all levels. A concentrated effort was directed toward developing mutual understanding in the subcultural areas.

The original objectives of the project have been modified to better fit the needs of the students involved. In some cases, the objectives were either reworded or adjusted to fit the need intended.

The summary section of this report includes the original objectives as written in the proposal, followed by the revised objectives and some new objectives. These revisions or inclusions are derived from practical observations made by the project staff members who were not included when the proposal was written. Project staffing had not been initiated when the proposal was being formulated.

6.(b). Goals and Objectives of the Project.

The focus of the program is to prepare students to enter gainfully into a career of their choice in which they have ability and interest and to continue learning on-the-job, in a technical school, community college or university.

The objectives of the project follow.

1. Elementary students (grades Pre-K-6) will know about careers as outlined in the program. This will be measured by the instruments provided in the program and the percentage of students accomplishing the program objectives will be reported by level and school.
2. Junior High students (grades 7-8) will know characteristics of the vocations in at least one career cluster after participation in each mini course. This will be measured by instruments provided in the mini courses.
3. High School students (grades 9-12) will become more aware of the career applicability of the skills they learn in the regular curriculum (English, Mathematics, Science, Social Studies) as measured by teacher made instruments.
4. High School students (grades 11-12) will develop the skills needed to have a salable entry level skill through learning in school and experience on the job. This will be measured by employee observations as reported to the counselor upon completion of the 11th and 12th grades.

5. Dropouts will learn skills needed to have a salable entry level skill after participation in the program. This will be measured by the number of dropouts who participate in the program, how long they participate, a report by their counselor on skill development, followed by reports from employers.

6.(c). Description of the General Project Design and the Procedures Followed.

This project is based on ideas from several other career programs. But, this project is unique because: (1) it is a career oriented sequence for grades K-12, and (2) it is used only for students in the Model Cities area.

The ERIC source, as well as another bibliography compiled by them (Intensive High School Occupational Guidance Approaches for Initial Work and Placement), demonstrates the worth of the guidance and counseling phase. Other elements of the proposed senior high objectives are based on references described in "Intensive Training for Job Entry Skills: A Selected Bibliography for Use in Program Development" and "Work Experience for Broadening Occupational Offerings: a Selected Bibliography for Use in Program Development," both of which were prepared by David McCracken and distributed by the ERIC Clearinghouse, the Center for Vocational and Technical Education, the Ohio State University, Columbus, Ohio. The "Orientation Approaches to Increase Student Awareness of Occupational Options" prepared by Nancy Sloan, "The Industrial Arts Curriculum Project" (World of Construction and World of Manufacturing) developed by Ohio State University, and the Education Series developed by Betty Dietz on "You Can Work in the Educational Services, in the Communications Industry, in the Transportation Industry, and in the Health Services," "Teaching Children About Technology" by Dr. Mary Scobey, and "Teaching Elementary Industrial Arts" by Dr. W. R. Miller and Gardner Boyd will be sources of references.

The schools included were chosen from within the Model Cities area. The decision of the administration and teachers was to begin with Davis and Roosevelt Elementary Schools with a total of nineteen teachers. Safford and Spring Junior High Schools and Tucson High were also selected for the initial phase of the project. Most of the students and over 80% of the children of school age in the Model Cities area live in the attendance district assigned to Tucson High School.

The schools to be involved with the general ethnic make-up follow:

First action year:

School	Student Population	% Black	% Mexican- American	% Other
Davis Elementary	255	13.7	85.0	1.3
Roosevelt Elementary	264	40.2	36.7	23.1
Safford Junior High	423	16.6	78.0	5.4
Spring Junior High	511	11.1	74.5	14.4
Tucson High School	2682	13.2	56.4	30.4

The total population of the elementary grades and the junior high schools within the schools selected for the project area were included. In numbers, this amounted to about 2,600 students.

The high school participants were any and all students who wished to take part in this program. Since records of previous years show in the neighborhood of 280 dropouts, (7.37%), it seems reasonable to assume that this program might well serve twice the number when actual dropouts are brought back into the program and potential dropouts are channeled in this direction.

All students from the two elementary and two junior high schools participated in the program. The high school participants were selected primarily from the Tucson High School student population. The population consisted of two categories of youth: those who are in school but who have been identified by their high school counselor as in a crisis situation and possibly in the process of leaving school; the second group will be youth who are out of school but who in the previous year were students at Tucson High School or who terminated from Tucson High School at sometime during the previous year. These youth were recruited through the project staff members utilizing all agencies available to the Model Cities agencies and the Tucson Public Schools.

Once the participants were selected, several methods were used to achieve the intended objectives of the program. These objectives were: (1) Academic class instruction; (2) Various types of counseling; (3) Vocational evaluation; (4) All group discussions; (5) Tutoring; (6) Skills development classes; (7) Vocational orientation and guidance; (8) Cooperative work experience; and (9) On-the-job training.

The in-school students were in regular high school academic classes or placed in special classes for part of the day, after which they were assigned to the intensified skill training classes.

These students received tutoring in subject matter. The away-from-school students who are participating in the program were encouraged to enroll in these classes by attending in the Tucson High School setting.

6.(d). Results and Accomplishments of the Project.

- If judged by the criteria of students and teacher interest in the elementary/junior high segment of the program, it can be said that the program has met the objectives.

A significant accomplishment is the fact that out of thirty-five teachers that started the program in the fall, thirty teachers, twenty elementary and ten junior high, remained in the program throughout the school year.

Discussions with the students and pre and posttest indicate that the children gained great exposure to the world of work. The forms and material used in the K-8 portion of the program are included in Appendix C.

This summer the Model Cities Exemplary Program will be a supplement of the Title I Reading Program. Two teachers were hired to set up a one-week career education program in the Model Cities elementary schools. Each teacher will spend one week in each school teaching awareness of the World of Work. Their daily schedule is included in Appendix D.

Student reaction in the high school has generally been favorable. Those students who have been retained in their respective job training stations have been satisfied with their experiences and have shown continued development during their training. Two of the most notable areas of development are in attitudes and maturity.

Another accomplishment is seen in the fact that five out of seven graduating seniors intend to continue training after graduation. It is interesting to note that four of these five students had no definitive post secondary plans at the time they enrolled in the program. Discussions with these students indicate that interest in further training was developed as a result of exposure obtained from their job training stations and, in several cases, from the advice and counsel of their job supervisors.

Employers providing job training stations have reacted favorably towards the program's intent and objectives and towards the attitude and job performance of the majority of students placed in training positions. Supervisor's evaluations suggest that the majority of the employers or job supervisors take a close interest in their trainees and make a serious effort to provide guidance, counseling, and assistance to the working student. See Appendix E for Robert Myers' End of Semester Report, and Appendix F for the forms used in the high school.

6.(e). Evaluation of the Project.

The third party evaluation was done by the Arizona State Department of Education, Division of Vocational Education, under the guidance of Mr. A. J. Gegan, Jr., Consultant to Exemplary-Work Study-Career Programs. The ratings consisted of four categories: excellent, good, fair and poor. The project was rated good by all members of the team. A copy of the evaluation report is included in Appendix A.

6.(f). Conclusions, Implications, and Recommendations for the Future.

Based on the experience gained to date, it is concluded that:

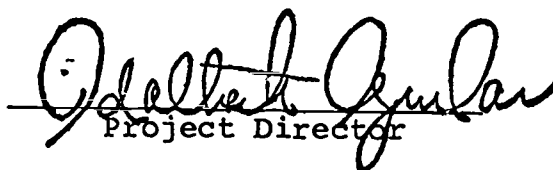

1. Although operating at a very low level compared to the total school population, the program has started to fulfill a vital need in terms of providing, counseling, guidance, career awareness, and job training.
2. Viewed in the prospective of late starting time, lack of experienced staff, and marginal resources, it can be fairly stated that the majority of the program's objectives have been met.
3. Response on the part of the staff and faculty, students and employers have been positive.
4. The majority of the students enrolled in the program have gained in terms of developed attitudes, maturity, and training experience that can lead to entry level employment or supportive employment for further training.
5. Staff experience gained during this period will be one of the most valuable assets for future program activities.

For the most part, the program activities were "played by ear" during this period. The many problems common to activation of a new activity were experienced on a daily basis.

One of the significant aspects of this program is the inclusion of provisions for transportation of students to and from job training stations. The lack of adequate transportation resources proved to be a major constraint on the program.

The experiences gained and lessons learned during this period have been most valuable towards identifying problem areas and developing plans for continued program activities. Some of the major actions planned at this time are discussed below.

1. Career Information Center: Experience indicates the requirement for expanded career information activity on the part of the Tucson High School Office. Establishment of a Career Information Center, space availability and resources permitting, is one of the priority actions planned for the coming fall semester. It is anticipated that such a center would provide a point of contact, job information, training information, career oriented literature, and other facilities for the use of students in search of job or career information or assistance. Resources for the Career Center would come from the following places: State Vocational Education Department, Occupational Education Laboratory School, and other local and national agencies.
2. Individual Training Plans (Tentative): It is desirable to establish an individual training plan for each student enrolled in the program. However, this action is contingent on the future office staffing level.
3. Plans be made for staff members to attend professional conferences related to vocational training or career education.
4. A minimum of two visits be made to other school systems engaged in career education programs.
5. Program resources be made available for support of proposed Career Information Center.

State Department Evaluation Report

Key: Y-Yes
N-No

CRA - Could not ascertain
N/A - Not applicable

	<u>Y</u>	<u>N</u>	<u>CRA</u>	<u>N/A</u>
1. Are project staff employed in a manner which insures a coherent program, consistent with the project design and objectives: Need more staff in order to reach goals of program.	<u>XXX X</u>			
2. Are there indications that the project design is consistent with the project objectives?	<u>XXXX</u>			
3. Are lines of authority, areas of responsibility, roles and functions designed and defined in a manner consistent with the project design and adequate to meet its objectives?	<u>XXX</u>		<u>X</u>	
4. Is administrative supervision adequate to accomplish the objectives of the project? Need for testing programs - also placement and follow-up.	<u>XX</u>	<u>X</u>	<u>X</u>	
5. Are project staff activities adequately related to the project goals and objectives, rather than to the general district program?	<u>XXXX</u>			
6. Is there visible evidence of the specialized activities required by the project?	<u>XXXX</u>			
7. Has the project goal or design been altered since the project began operation? Not in operation long enough to determine just got started	<u>XX</u>	<u>X</u>	<u>X</u>	
8. Where required by the project design, is there significant community or parent involvement in the project operation? Especially with D.M.A.F.B. I believe they are - this should be one of their written objectives.	<u>X</u>		<u>XX</u>	<u>Y</u>
9. Is the goal and design of the project grossly incompatible with the general educational program design of the district? District program should be developed to be more compatible with students on the job.		<u>X XXX</u>		
10. Is there evidence of a degree of need sufficient to justify the funding of the project? There is a need for program - preter need for placement	<u>X XXX</u>			

- | | Y | N | CNA | N/E |
|---|-------|--------------|-----|-----|
| 11. Is the project effort focused on its optimal target population?
<u>appeared so, though project is just getting started.</u> | XXX | | | |
| 12. Is the project compatible with local needs and resources?
<u>But listed. Just beginning to tap both.</u> | XX | | | |
| | | One no check | | |
| 13. Is there an indication of satisfaction with the project among the project staff, pupils, parents, or community members?
<u>only talked to staff & pupils</u> | XXX | | | |
| 14. Are the project plans and operational procedures available to project staff at appropriate levels to the degree necessary for efficient project implementation?
<u>Not sufficient time to determine.</u> | XX | X | XX | |
| 15. Are the requisite qualified staff employed and present?
<u>Adequate staff for what is being done.</u>
<u>Additional personnel needed. Appears staff I met are well qualified, but more staff appears necessary</u> | X X | | XX | |
| 16. Has the staff had recent training that enhances their ability to accomplish the objectives of the project?
<u>Voluntary participation by teachers. Past experiences of 2 staff members met appears to greatly enforce success of program</u> | X | | XX | |
| 17. Has the staff received orientation relative to their project assignments?
<u>But need for more is apparent. Project just beginning. I believe administration is aware of this need.</u> | XXX | | | |
| 18. Is staff morale compatible with the success of the project?
<u>By participating staff members.</u> | X XXX | | | |
| 19. Have project personnel developed an adequate internal monitoring and evaluation procedure?
<u>Need for evaluation.</u>
<u>Program in operation since 1/1/72 they are working on this along with objectives.</u> | X | X | XX | |
| 20. According to the project administration, is the project in phase with its fiscal and operational calendar?
<u>No Fiscal calendar available.</u> | XX | | X | |
| 21. Is there evidence of waste of project funds? | | XXX | | |

	Y	B	CNA	R/
22. Are necessary instructional materials in evidence? <u>Needs to be completely developed but have good start.</u>	X XXX			
23. Does the administration favor the objectives of this project? <u>Administrators of projects the one visited school</u>	XXXX			
24. Is the number of pupils involved in the project consistent with the project plan? <u>There should be more pupils involved.</u> <u>Project is just getting started. This is just being developed</u>		XXX	X	
25. Is the project economically efficient? <u>Not in operation long enough - from what I saw</u>	XX		XX	
26. Is the project functioning as a part of the total educational program of the school? <u>This I believe is the most important area to be worked on -- if it doesn't happen, the program will not reach its goal.</u>	XXX	X		
27. Does the pupil-teacher ratio indicate the concentration of effort and resources necessary to the success of the project? <u>By interested personnel</u>	XX		XX	
28. Is the organization of the school conducive to the successful implementation of the project? <u>But I object to the long hours students at DMAFB put in at school.</u>	XXX		X	
29. Are the facilities and equipment available to the project that are necessary for its successful implementation? <u>More will be needed as project develops</u>	XXX		X	
30. Is there evidence that all equipment and supplies provided through categorical funding are being properly used? <u>As far as one short visit would indicate -- appears so.</u>	XXX		X	
31. Are there available space and housing compatible with project purposes and design? <u>They will need more as their impact increases</u>	XXX			
32. Is the project providing services to all persons and institutions specified in the application or required by law? <u>But has worked well with other programs</u>	X		XX	

1 no check

33. Are all practices or conditions consistent with laws or regulations governing the project?

XX

XX

34. Are adequate means and intention evident to accomplish competent evaluation of the project?

XX

X

X

Intention - means being developed - means are being worked on - intent yes. They are working on this at present.

35. Do you suggest the project director seek help in properly meeting dissemination obligations?

XX

XX

Project directors always need more help

36. After the conclusion of the project, will it have a permanent effect upon the educational program in the district?

XX

XX

Provided it is suggested in carrying out its objectives.

Too soon to determine. At present no, but project is just getting started

Narrative Summary Evaluation

SUMMARY SHEET

1. State the strengths and weaknesses of the project as of the evaluation visit date.

STRENGTHS

Enthusiasm of project people - needs of students at DMAFB seem to be being met - summary of activities indicates that a number of necessary things are being done - the Tucson Public School Dist. # 1 seems to give the project good support.

Secondary program and Davis Monthan A.F.B. project excellent
Excellent attitude by staff and teachers.

Project director and staff met. Are doing an excellent job. Interaction with other programs has been developed and is very important. Need for program to become part of total curriculum not just another Vocational program.

WEAKNESSES

No fiscal calendar - no evaluation as yet (instruments are needed)
Schools are not adjusting sufficiently to make the program a success.
Students should not have to spend such long hours in school where they work at DMAFB.

Not enough placement - too many on hold list pending action
Needs to be expanded.
Understaffed
Lack of testing program

The project needs to develop a testing program for the students going into the vocational preparation stage to help the students understand their strengths and weak areas. The project needs to have a good strong relationship with the guidance department.

2. Is the project design and program concept and practice consistent?

Yes, at this early stage of development.

Yes, as far as I can tell.

Yes

3. Is the project practice consistent with stated objectives as per the project calendar?

Yes

With their late start they are doing a very good job.

Yes, as far as the activity calendar goes.

4. What concerns are evident for implementation and management?

The administrators of the schools involved became involved in the implementation of the program as part of their on-going curriculum changes in their respective schools.

A need for testing program

A need for testing placement and follow-up

Cannot answer.

5. Does it appear that this project demonstrates a solution to the problem, that will make a significant impact on the critical educational needs of youngsters? (Specify)

"3" Yes, with the pupils presently on the job, it is being very effective. In the school curriculum as such when students from these jobs are back in the classroom nothing but; he changes in time, is being done to meet needs of student education.

Yes, especially for potential dropouts who may see a reason for staying in school. (But the schools need to change for this to work.)

To a limited number in secondary program/work program too early and difficult to evaluate at elementary level.

For those students involved. This program will help the drop out, but what about those students that they are unable to place?

6. Comments about any important (positive and/or negative) feature of the proposal about which there is no reference.

The project director and staff talked to are aware of problems of the project and are taking steps to meet these. Also of developing new objectives a means of evaluating are being done as an important part of the project.

Are there duplications between this and the Developmental Career Guidance Education Project? If so, how can this be resolved?

Testing program -

Internal follow-up of student interest at elementary level for correlating or consistency into secondary schools. Need for emphasis on placement and follow-up. More extensive use of local advisory committees.

APPENDIX B

Site Inspection Team Report

Tucson Public Schools
Tucson, Arizona

The career education program is comprised of all grades K-12 divided into three segments: K-6, 7-8, and 9-12. One-hundred percent of the students in the K-6 and 7-8 segments are participating while the number in the 9-12 segment is unknown--students participate on a volunteer basis only at this time.

The overall objective is to broaden occupational understandings, train and place youth, particularly the actual and potential dropout. Through use of counseling, a resource person, information materials, work conditioners, evaluative methods, cooperative vocational programs, placement services, manpower agencies, the Model Cities Project and the multi-agency approach for alienated youth, the program plans to reach its main objectives.

Though the career education concept has been an integral part of this program, it has not been used to its fullest. A greater assimilation is planned by bringing into play community resources, inservice training for teachers, and Model Cities administrative staff and aides. Classroom teachers will assimilate the material as they see a need.

Particular to this career education program is the provision of real hands-on experience in the elementary grades, a change from Industrial Arts to "World of Construction"/"World of Manufacturing" in junior high, and crash programs, increased liaison with community for senior high students and out of school youth.

Due to late funding on Federal and state levels, implementation of the program is not on schedule, therefore there has not been a major curricular change. Rather changes are now being conducted on an individual basis.

Personnel providing supportive services for students in the program are counselors, a Coordinator of Occupational Services, and a part-time psychologist. Guidance, placement and follow-up are being delegated to program staff with the help of the Palo Alto Educational System. Close relations with the Model Cities staff is helping to identify students in need of the career education program, while placement is being aided with the excellent help and cooperation of the personnel in the Davis-Monthan Air Force Base and private industry in the area.

Inservice training for school administrators and teachers is being carried out by means of regularly scheduled meetings to involve them in the planning and implementing of the program. Also, an extension course available to participating teachers is offered by the state university. Other plans for training are being considered at this time.

The initial thrust of community involvement in the program came from the Model Cities Educational Committee. An advisory board has been set up utilizing the staff of the Education Committee, the director of the Bureau of Apprenticeship, and a representative from a private construction firm. There are plans to add a representative of Model Cities. Other input information has been gathered from the community at employee/employer levels.

Evaluation data of the program is being gathered through pretesting and posttesting. Also being used are monthly activity reports and the follow-up of the Palo Alto Educational System.

EXEMPLARY VOCATIONAL EDUCATION PROGRAM

Description

The program was initiated in September, 1971 in the Model Cities area with Office of Education funds. The participating schools for the first year are Davis and Roosevelt Elementary Schools, Safford and Spring Junior High Schools and Tucson High School.

The program will be expanded to involve five Model Cities elementary schools, during the 1972-73 school year.

Goal

The focus of the program is to equip students with knowledge and experience so that they will have an entry level salable skill.

Objectives

1. Elementary students (grades pre-K-6) will know about careers as outlined in the program. This will be measured by the instruments provided in the program and the percentage of students accomplishing the program objectives will be reported by level and school.
2. Junior High students (grades 7-8) will know characteristics of the vocations in at least one career cluster after participation in each mini course. This will be measured by instruments provided in the mini courses.
3. High School students (grades 9-12) will become more aware of the career applicability of the skills they learn in the regular curriculum (English, mathematics, science, social studies) as measured by teacher made instruments.
4. High School students (grades 11-12) will learn the skills needed to have a salable entry level skill through learning in school and experience on the job. This will be measured by employee observations as reported to the counselor upon completion of the 11th and 12th grades.

Activities

1. The teachers who volunteer to participate in the program will assist in the construction of program methods and materials to be used at all levels. This will be done through their workshop participation, as measured by a written program and/or instructional ideas.

2. Students will learn through:

Field trips

Resource Personnel

Films and Filmstrips

Role Playing

Game Activities

Hands-on Experience

The children have constructed the following materials through hands-on experiences:

Pencil Holders

Bird Houses

Art lanterns

Looms

Games

Puppet Stage

Trains

Drivets

Decoupage Plaques

Cars

Prints

EXEMPLARY VOCATIONAL EDUCATIONAL PROGRAM

Elementary Teachers Workshops

May 9, 10, 1972

May 11, 12, 1972.

First Day

8:45-10:00 a.m.	Orientation - presentation of program purpose and workshop objectives
10:00-10:15 a.m.	Break
10:15-12:00 a.m.	Group discussion on development of group activities in career education.
12:00-1:15 p.m.	Lunch
1:15-2:15 p.m.	Discuss record keeping activities.
2:15-2:30 p.m.	Break
2:30-4:00 p.m.	Groups by grade level for development of activities

Second Day

8:45-9:00 a.m.	General meeting
9:00-12:00 a.m.	Development of activities
12:00-1:15 p.m.	Lunch
1:15-3:00 p.m.	Development of activities
3:00-3:45 p.m.	Large group sharing session
3:45-4:00 p.m.	Evaluation of workshop

EXEMPLARY VOCATIONAL EDUCATION ELEMENTARY SCHOOL WORKSHOPS
May 8-11, 1972

Description

Two two-day workshops, one for primary and one for intermediate teachers will be held at Davis Elementary School. A teacher at each grade level from ~~Boyle~~ Boyle, Drachman, Ochoa, Davis and Roosevelt Elementary Schools will meet along with resource teachers, the program staff, an evaluator from the District #1 Research Department and Dr. Pat Nash, University of Arizona consultant.

Purpose

Integration of the career education concept into the basic curriculum

Product Objective 1

Teachers involved in the Exemplary Vocational Education Program will understand the basic concept of career education as measured by their performance of 80% proficiency on an instrument developed by the inservice staff.

Process Objective 1

Teachers involved in the Exemplary Vocational Education Program will participate in a two-day workshop devoted to orienting teachers to career education. This will be measured by documentation of workshop activities.

Product Objective 2

Teachers involved in the Exemplary Vocational Education Program will develop activities and materials related to career education as measured by the number of activities developed (at least one for each teacher).

Process Objective 2

Teachers involved in the Exemplary Vocational Education Program will participate in scheduled workgroups given to development of activities and materials related to career education. This will be measured by documentation of scheduled workgroups.

EXEMPLARY VOCATIONAL PROGRAM

WORKSHOP EVALUATION (Teacher Opinion)

Teacher:

Please give us your opinion regarding the Exemplary Vocational Program inservice workshops. Using the rating scale of 1 - 5,

<u>1</u>	<u>2</u>	<u>3</u>	<u>4</u>	<u>5</u>
If you came away feeling very pleased.	If you were somewhat pleased.	You were neither pleased nor displeased.	If you had some negative feelings.	If you were extremely displeased.

(Circle one)

About the materials you saw	1	2	3	4	5
About the speakers you heard	1	2	3	4	5
About the uses <u>you</u> might make of ideas you received in the workshop	1	2	3	4	5
About the workshop in general	1	2	3	4	5
About the Careers Program in general	1	2	3	4	5

Evaluation

FOREWORD

Safety Education has always been a concern of all those engaged in education and has been a part of the total curricula. Providing a safe environment and developing positive safe attitudes, habits, and skills have always been important objectives. The prevention of injury to the students, teachers, and visitors; the prevention of destruction of facilities and equipment; and the proper and safe procedure in the use of hand tools and equipment are of great importance and must receive prime consideration.

This brief guide was developed to assist the teachers and students in grades K-6 that will participate in the Model Cities Exemplary Vocational Program in an effort to prevent accidents and injuries by learning the correct, safe way to handle and use tools. Please remember that it is only a guide; it is not a complete safety program nor will it answer every question or serve every need. An effective program is continuous and part of the daily teaching-learning situation.

The primary purpose of this guide is to assist in the constructional activities which will enable the children to have meaningful learning "hands-on" experiences in using materials and tools. The students will learn by doing.

THE FIVE "E's" OF SAFETY EDUCATION (1)

- Engineering: Control of physical conditions
- Education: A planned, positive approach to learning safety rules and behavior
- Enforcement: Constant insistence that safety rules are followed
- Example: The teacher as a leader and "pace-setter"
- Enthusiasm: The essential ingredient of both teacher and student

(1) Adopted from Teacher Liability in School-Shop Accidents,
Dr. Denis J. Kigin, Prakken Publications, Inc., Ann Arbor,
Michigan, 1963.

A sixth "E" should be added:

- Evaluation: Ways and means of improving program of safety and preventing recurrence of accidents

UNIT I

General Items

1. First Aid Kit - A first aid kit containing a complete supply of approved first aid materials must be maintained at all times.
2. Injury - All cuts, abrasions, burns, or bruises - regardless of seriousness - must be reported to teacher immediately. The teacher should inspect injury and when necessary give first aid treatment. When an accident warrants sending a student to the nurse, he should be accompanied by another student. A record of each accident where student requires nurse's attention should be kept. Injuries requiring services of a physician should be reported on the "Recommended Accident Report Form." Principal should be immediately informed of all major accidents and conform to policies of the Tucson Public Schools.
3. Fire Equipment and Fire Exits - Students should be instructed on proper escape routes in case of fire or other emergencies. They should know the location of fire protection equipment.
4. Lifting: - Children should not attempt to lift heavy objects.
5. Personal Conduct - Running, pushing, rough or boisterous play is unsafe where tools are being used. It is dangerous and must be controlled. Tossing or throwing of objects in the classroom is not permitted.
6. Storage - Store all combustible materials safely. Poisonous materials should be clearly marked, stored where it is difficult for students to obtain, handled with the precautions that are specific to that particular item, and supervised by the teacher.
7. Tool Storage - Tools should be kept in a safe place and when not in use be returned to the proper place.
8. Housekeeping - Keep floors clean of oily substances and articles that might result in a fall. All spills should be wiped up immediately. Keep all oily rags in a container.
9. Nails and Tacks - Do not hold or place nails, tacks, or screws in mouth.
10. Protruding Nails - Boards with protruding nails, brads, or screws should be removed to prevent possible injury.
11. Scraps - Do not permit scraps to accumulate on the floor; provide a scrap box.

UNIT II

General Safety in Use of Hand Tools

The correct way is the safe way! A "healthy respect" for tools is desired, not fear!

1. Use of Tools - How to use tools correctly and safely should be taught before a tool is used. Instruction should be repeated as often as needed.
2. Sharp Edged Tools - When using sharp edged tools do not cut towards the hand or body.
3. Report - Report anything to your teacher that may lead to an accident, including dull and broken tools or equipment. These should be corrected immediately or replaced.
4. Carrying Tools - Cutting edge tools or tools with sharp points should be carried with the points and cutting edge down. These tools are not to be carried in your pockets.
5. Handing Tools to Others - Tools should be handed to others in a way that neither you nor the other person will be forced to handle a cutting edge.
6. Holding Work - Work should be securely held down with a clamp or vise when being worked on.
7. Use of Tools - Tools are made for a job; use them for this purpose only. The use of the tools should be supervised carefully.

UNIT III

Student Participation in Safety Programs

There are many opportunities for the students to participate actively and to act positively in a safety program. Some of these activities could be:

1. Prepare safety slogans and posters.
2. Form a school safety committee.
3. Have a safety suggestion box.
4. Study traffic safety.
5. Provide for presentations by firemen, policemen, traffic patrol, etc.

UNIT IV

Individual Hand Tools - Identification

- I. Hand Saws - There are many varieties and shapes of hand saws, each made to do a job. Teeth filed on each saw are the cutting edges. Saws are available with large or small teeth and in various lengths. In general, the large teeth are used to cut soft materials and the small teeth for hard materials and finish work.

A. Cross-cut Saw

The cross-cut saw is designed to cut across the grain (fiber) of wood. Note that the teeth are sharpened like a series of knives that enables it to make a clean cut when used to cut across the grain.

"Points to the inch" is the term used to designate the size of the teeth in a saw. The fewer the number of teeth to the inch the rougher the cut; the greater the number of teeth the smoother the cut. If used to cut with the grain, it will be slower than necessary.

B. Rip Saw

The rip saw looks like a cross-cut saw with the exception of how the teeth are filed and shaped. This saw is designed to cut with the grain of the wood. The teeth are filed and sharpened to resemble small chisels which enables it to cut quickly and cleanly with the grain. If used to cut across the grain, the cut will be ragged.

C. Back Saw

The back saw is used for fine work. The fine blade and teeth leave a fine surface. The teeth are sharpened the same as the teeth of a cross-cut saw. The blade is reinforced with a heavy metal band that helps support the blade. A high degree of control can be maintained with this saw in cutting with or across the grain.

D. Coping Saw

The coping saw is designed with a thin blade in order to cut irregular curves and may be adjusted to any angle in the frame. The blade may be inserted to cut either on a "pull stroke" or a "push stroke."

Pull Stroke - down stroke. Push Stroke - away from body.

Care must be taken in purchasing the correct blades.

E. Keyhole Saw

The Keyhole saw is made with a narrow, tapered blade which is attached to the handle. It is possible to have various length and width blades that may be interchanged. It is used to cut irregular curves in heavy stock and to cut interior circles or curves in a surface. The cut is usually started from a hole based near the line to be cut. The saw is usually made to cut only on wood.

F. Compass Saw

The compass saw is similar to a keyhole saw except that the blades are larger.

G. Hack Saw

The hack saw is primarily designed to cut metal. The blades are available with fine (34 teeth), medium (24 teeth), or coarse (18 teeth), and also in different lengths. When cutting thin metal a fine blade is used.

II. Planes

A. Bench Plane

The bench plane may be purchased in different lengths. It is a special tool with a cutting blade for smoothing and removing wood as shavings. It takes patience to learn to adjust, use, and keep it in good condition.

B. Block Plane

The block plane is a small plane having a low angle, single plane iron. It is usually held in one hand, is light, and can be handled easily by children.

III. Boring and Drilling Tools

A. Hand Drill

The hand drill is used to bore small holes with a twist drill needed to install nails, screws, and small bolts.

B. Brace

The brace is a tool used to hold auger bits for drilling larger holes than can be drilled with a hand drill. It is also used with a screw driver bit or a countersink.

C. Bit

A tool used to bore holes in wood, metal, or plastics.

- 1) Auger bit - usually ranging from 1/4" to 1" by 16th. The number stamped on the tong designates the size in 16ths of an inch. Examples: 4 means 4/16" or 1/4"; 9 means 9/16". Used on woods or soft materials only.

- 2) Straight Shank Drills - Used to bore small holes and can be held in hand drill or brace. These may be used on metal. Sizes from 1/64" to 1/2".

- 3) Countersink Bit - Commonly called the countersink. It is used to shape the top of a hole to receive a flat head screw. The head of a countersink bit is tapered to a point, or conical shape. The rose type of countersink, illustrated, is the one most commonly used and may be used for countersinking holes in soft metal as well as in wood.

IV. Other Hand Tools

A. Woodworking vises

The vise is used to hold materials firm.

B. C-Clamps

A c-clamp is a holding and clamping device. C-clamps come in many sizes. A 4" c-clamp designates the opening size of the clamp.

C. Files and Rasps

There are many shapes and sizes of files and rasps. They can be flat, half round, round, triangular, or square. They may be rough, medium, or fine. A file is usually not as coarse as a wood rasp. They are used to shape, form, or smooth materials. Files may be used on metals. Files should never be used without a handle.

D. Card File

A card file is used to clean files and rasps.

E. Hammers

- 1) Claw Hammer - A claw hammer is used to drive or pull nails. Handles may be of wood or metal and come in various weights.

- 2) Ball Peen Hammer - A ball peen hammer is used mostly when working on metal. Has a ball-shaped head on one end.

F. Nail Set

A nail set is a small metal punch with a cupped end used to sink the head of a nail below the wood surface. The cupped end prevents it from slipping off the head of the nail.

G. Pliers

- 1) Combination - A tool used for holding or bending pieces of metal. It is adjustable by means of a slip joint and has serrated jaws to help in holding materials firmly.

- 2) Side Cutting - Often referred to as electrician's pliers. They are used for holding materials and for cutting wire.

H. Screw Drivers

Screw drivers are used to install screws and bolts. They come in various lengths and sizes and in two varieties. The plain screw driver is used for the slotted-head wood screws, and the Phillips screw driver for the Phillip screws.

I. Scratch Awl

A tool that must be handled carefully. It is helpful in starting a hole so that the boring or drilling bits will have a center to begin with. Also used to scribe accurate lines or locate points.

J. Bench Rule

A measuring tool. May be 12", 24", or 36" long.

K. Try-Square

A tool with a blade that can be used for measuring and to check squareness of stock.

L. Combination Square

A measuring tool with the blade that slides through the handle. Is usually fitted with a level and may be used to check squareness or 45° angles.

M. Dividers

A divider is a tool used to draw circles, or part of circles (arcs), or for stepping off equal distances. May have a pencil on one end.

N. Surform Tools

A surform is a forming tool with hardened and tempered tool-steel cutting blade. Used similarly to a wood file or rasp. They come in two basic forms, a file type or a plane type.

O. Miter Box

A miter box is used to make a square or 45° cut with a back saw or a cross-cut saw.

P. Wood Chisels

Wood chisels are used to shape and fit parts. They have a sharp, exposed blade and must be handled carefully.

UNIT V

How to properly use hand tools.

A. Hand Saws

1. Holding work - material that is to be sawed must be held securely by either a vise or clamped to a bench top. Work should never be held in the hand or on any part of the body when cutting.
2. Correct stance - The student's feet should be planted firmly and spread slightly at a comfortable stance.
3. It is recommended that the beginning students use a guide block clamped to the wood where the cut is to be started. After the cut is started, the back of the saw is slowly lowered until the saw is completely across the material being cut.
4. Hand position - The left hand is placed on the work or bench away from the cutting edge of the saw.
5. Starting the cut - The saw cut is started with short and slow back strokes.
6. Saw strokes - The saw stroke should be slow and have regular rhythm. Force should not be used while cutting. The entire length of the saw should be used while cutting.
7. Ending the Cut - To prevent a rough breakthrough, most of the saw's weight should be withheld when approaching the end of the cut.
8. Saw Maintenance - Saws must be sharp to be safe. Do not lay a saw down teeth first and don't store a saw on its teeth. Nails and screws should be removed from the cutting path of the saw.

B. Hand Planes

1. The block plane is small and easy to handle. This tool was designed to be held in one hand by an adult, but small children may find it desirable to use both hands.
2. Bench Plane - The bench plane was designed to be held with both hands. The primary function of a plane is to produce straight, flat, smooth surfaces on wood.
3. Stance - When using this tool the student should be taught to stand with his feet at least shoulder width apart and use his body weight and leg muscles to force the plane through the wood.

4. Plane Strokes - When planing edge grain, downward pressure should be applied to the front of the plane at the beginning of the cut. When the entire plane is on the surface of the wood, even, downward pressure is applied to the front and back end of the plane as the stroke is made. On ending the cut, pressure is released from the front end but maintained on the back end until the stroke is completed.
5. When planing end grain, the plane should be started at the outside edge and pushed toward the center. By planing toward the center and not permitting the plane iron to come in contact with the edge grain, the problem of damaged edged grain can be avoided.

C. Boring and Drilling Tools
Brace and Hand Drill

When boring a hole in wood, the stock should be held in a vise in either a horizontal or vertical position. It should be firmly clamped to a piece of waste stock that will support the wood around the edges when the bit cuts through the opposite side.

If it is not convenient to "back up" the stock with scrap wood, you can bore from one side until the feed screw just starts to come through, then reverse the stock and finish the hole from the other side.

When boring, the brace or drill handle is turned clockwise. Keep the bit at right angle to the wood being bored. Use extra care when starting a hole in plywood or jaw will splinter the veneer around the edge of the hole. A clean cut hole in plywood is accomplished by starting the hole with slight forward and backward cuts with the brace and bit until the surface veneer is completely cut.

D. Hammers

The hammer is used in driving nails. The nail is held between the thumb and forefinger. Tap the nail lightly to start it into the wood. Take your hand away from the nail. Drive the nail by swinging the arm and hammer as a unit. Use just a little wrist movement. Strike the nail with firm blows, keeping your eye on the nail.

E. Files, Rasps, Surform Tool

Files and rasps are never used without handles. The tong or sharp end of the file can cause serious injury.

When filing hold the handle of the tool in your right hand and the point in your left. Apply moderate pressure on the forward stroke, making a shearing cut at a slight angle. Lift the file off the material on the return stroke and repeat the operation.

Always keep the teeth clean with a file card.

The surform tool is used as you would a rasp or file. For best results apply light, even pressure against the wood. The surform produces a smooth, even surface.

EXEMPLARY VOCATIONAL PROGRAM
OCCUPATIONS RATINGS
Junior High and High School Students

STUDENT'S NAME _____ DATE _____

GRADE _____ TEACHER _____ SCHOOL NAME _____

Below are listed several occupations. For each, you will answer three questions:

- A. What prestige or social status do you feel most people give this occupation?
- B. How much personal satisfaction would this occupation give the employee?
- C. To what extent is this occupation essential to the functioning of society?

Please circle your chosen answers.

1. Sales clerk

1A. Prestige or social status:
1-very high
2-high
3-medium
4-low
5-very low

1B. Personal satisfaction:
1-none
2-little
3-some
4-much
5-very great

School is a drag for Clarence. The best part of the day is lunch. He rarely does his work and if he tries to do something, the teacher usually has to make him do everything again. Sometimes the other kids in the class laugh at him when he acts silly and the teacher gets mad. At home he likes to help his mother by cutting grass and fixing things like leaky faucets, lamps, and lawn mowers. He builds model airplanes and keeps taking things apart and putting them back together. What kind of job do you think Clarence might have when he grows up? Check three jobs for Clarence:

<input type="checkbox"/> Office manager	<input type="checkbox"/> Teacher	<input type="checkbox"/> Airplane mechanic
<input type="checkbox"/> Plumber	<input type="checkbox"/> Radio-TV repairman	<input type="checkbox"/> Bank teller
<input type="checkbox"/> Doctor	<input type="checkbox"/> Coach	<input type="checkbox"/> Architect
<input type="checkbox"/> Accountant	<input type="checkbox"/> Geologist	<input type="checkbox"/> Veterinarian

Richard is outstanding in baseball, well-behaved, and has a pleasing appearance. Everyone likes him. He is described as being "fair" with everybody. He is often chosen as team captain and class officer. He makes pretty good grades in all his subjects. In his spare time he likes to teach baseball to the younger children in his neighborhood. What kind of job do you think Richard might have when he grows up? Check three jobs for Richard:

<input type="checkbox"/> Professor	<input type="checkbox"/> Policeman	<input type="checkbox"/> Jeweler
<input type="checkbox"/> Pilot	<input type="checkbox"/> Librarian	<input type="checkbox"/> Coach
<input type="checkbox"/> Editor	<input type="checkbox"/> Artist	<input type="checkbox"/> Office manager
<input type="checkbox"/> Nurse	<input type="checkbox"/> Secretary	<input type="checkbox"/> Interior decorator

Directions: Read these stories about students your age. Then for each student, check three jobs that you think the student might have when he grows up.

Tony is very quiet and shy. His grades are average. He loves working with his hands and enjoys showing friends how to whittle or make models from scrap lumber. After school he enjoys helping his father around the house and has built bookends and birdhouses. Sometimes his father allows him to work on the family car and Tony thinks that is a lot of fun. What kind of job do you think Tony might have when he grows up? Check three jobs for Tony:

<input type="checkbox"/> Senator	<input type="checkbox"/> Actor	<input type="checkbox"/> Car salesman
<input type="checkbox"/> Geologist	<input type="checkbox"/> Mechanic	<input type="checkbox"/> Secretary
<input type="checkbox"/> Carpenter	<input type="checkbox"/> Editor	<input type="checkbox"/> Clergyman
<input type="checkbox"/> Teacher	<input type="checkbox"/> Accountant	<input type="checkbox"/> Radio-TV repairman

Sonia has a great smile and always takes time to be a friend to her classmates. She speaks both English and Spanish well. She is a good reader and enjoys giving book reports. Her grades in English are good and her other grades are average. What kind of job do you think Sonia might have when she grows up? Check three jobs for Sonia:

<input type="checkbox"/> Secretary	<input type="checkbox"/> Artist	<input type="checkbox"/> Librarian
<input type="checkbox"/> Baker	<input type="checkbox"/> Doctor	<input type="checkbox"/> Stewardess
<input type="checkbox"/> Waitress	<input type="checkbox"/> Factory worker	<input type="checkbox"/> Maid
<input type="checkbox"/> Archeologist	<input type="checkbox"/> Bank teller	<input type="checkbox"/> Dressmaker

Kids Get Inside View Of World Of Work

By CYNTHIA HANERJEE
Star Staff Writer

World of Work, one facet of a summer reading program in Tucson School District One, is relevant to the pupils — both now and for the future.

This program is part of the five-week 1972 Title I summer reading improvement project, directed by Bill Braucher, principal of Carrillo Elementary School.

The children, about 900 total in 19 schools, were found to need special help in reading on the basis of tests and teacher recommendations. The bulk of their summer work is spent in the classroom — working with a reading teacher, delving into music or art and studying in the library.

But for one week they participate in World of Work, highlighted by a visit to one of 10 models and hotels. There they meet people at work in a

wide range of professions and jobs. They also see the ever-present need for reading knowledge — menus, message handbooks, checklists and mailboxes.

During the week when their school is involved in World of Work, the program replaces the children's music-art period. On Monday they take a pre-test of their knowledge of common occupations, play games, identify jobs by occupation related hints the teacher shows them. On Tuesday they plan for their trip to a hotel and hear about the people and jobs they will see.

Pupils from two schools a week visit the hotels, grades 2 and 4 on Wednesdays and grades 3 and 6 on Thursdays.

On Friday, the children have a "hands-on" experience of making wooden trays similar to those used by some restaurants. This way, "the children learn to take measure-

ments — the value of arithmetic in daily life," said John Mitchell, Model Cities Exemplary Vocational Education Program resource person, who acted as a consultant to the Title I reading program.

The trays, when finished, measure 10 by 12 inches and have wooden handles at each end. After finishing the wood-working part, the children are encouraged to decorate the trays with their own designs. After they finish, they can take the tray home.

How successful is the program? Braucher says the program is in its second year, and he measures its success by two criteria. One is parent enthusiasm. Like all Title I programs, it must be approved by a parents advisory board. The year, the board requested the program be held again.

"We found a marked in-

(Continued On Page 10)

A BIG COMPUTER impresses Barton Elementary pupils visiting the Ramada Inn as part of the World of Work program. With computer operator Anthony McCure are, from left, Deborah Grinn, James Castro and Richard Lopez.

COMMUNICATIONS are vital to the smooth running of a hotel, these Mission View Elementary School fifth and sixth graders learn as they gather around the letter box at the Sheraton Pueblo Inn. From left, Lucy Camecho, Betty Salinas and Yolanda Madrid learn about mail operations from Mark Gross, assistant manager.

Hotel Tour Shows Pupils Need For Reading

(Continued From Page 1C)

crease in vocabulary, based on the tests the children were given at the beginning and end of the program. In a program of this sort, it's difficult to measure improvement in comprehension over such a short time," Braucher said.

One recent tour of the Sheraton Pueblo Inn was typical. About 30 children and four teachers arrived in the lobby at 9:45 a.m. Various employees showed them the workings of switchboard, maintenance,

laundry and housekeeping rooms, the whirlpool bath and swimming pool, several types of rooms and suites, the kitchen and outside grounds.

Each child delighted in being allowed to take ice from a big ice machine, rolling on a waterbed in one of the suites, and being given pens, stickers and a hotel directory to take home. The tour ended about 11:30 a.m.

"This is something the children really relate to," said Barbara Young, one of the two World of Work teachers.

"Some of the jobs they see are jobs they can envision themselves taking." They see a realistic side of work. For instance, a group visiting one hotel talked with a dishwasher who said he hated his job; another group at another hotel met a gardener who was unenthusiastic about his job.

At the Desert Inn, the children met a movie casting agent who was staying there. He encouraged them to try out for bit parts. At the Ramada Inn another group met three airline pilots and some stew-

ardesses who were checking out just as they came into the lobby.

"It broadens their knowledge — a whole new spectrum of vocabulary," said Mrs. Young. "One group, which was typical, had 45 students. Of those, 42 had never before visited a hotel and 40 had never been in a restaurant."

Braucher, Michell and Mrs. Young all had praise for the hotels and motels. "They all treat the kids so well and make them feel really important. They're all so nice."

Mrs. Young said. Hotels and motels participating in the program are the Desert Inn, Tucson Inn, Aztec Inn, Ramada Inn, Howard Johnson's Motor Lodge, the Spanish Trail Motel, the Sands Motor Hotel, the Plaza International Hotel, Pioneer International Hotel and the Sheraton Pueblo Inn.

Elementary schools were the program is conducted are Carrillo, Richey, Manzo, Davis, Menlo Park, Drachman, Ochona, Mission View, Barton and Holladay.

APPENDIX D

Title I Reading Program Schedule

POSTAL-RESTRICTED LETTER

Thank you for being part of London Public Schools' summer
learning program. The boys and girls who will be participating are
sure to gain a great deal from the experience you are providing
by making it possible to have an in-depth field trip to your hotel.

We are studying the World of Work and consequently our main
area of interest will be the people who make the hotel work. We
are including a list of the various individuals we would like to
speak with during our visit. The children are from 6-12 years of
age and will want to know all about the jobs people fill. We hope
you'll be able to make arrangements for your staff to speak with the
children and to let them see the workers in action.

Your cooperation is greatly appreciated by all of us who care
about children! Please let us know if you have any questions.
Our date to visit you will be _____.

We're looking forward to an educationally rewarding and fun
trip to your hotel.

Sincerely,

John Michel

FIELD TRIP SCHEDULE

CAREER EDUCATION PROGRAM: OUTLINE

WEDNESDAY--Student Awareness of Careers--"What is the World of Work?"

- A. Career Education Questionnaire--The objective of this questionnaire will be to test the child's present knowledge of career ed., with emphasis on restaurant and hotel work. The questionnaire will give our field trip more meaning, as we will have a working indication of their awareness of hotel and restaurant careers.
- B. Feltboard Activity--Discussion with children through the use of felt figures which deal with an assortment of careers.
- C. Tools of the Trade Game--For stimulation of children's interest. Various tools will be shown with children guessing which careers use the tools, and to expand their knowledge of the tools actually used in work.
- D. Discussion of Parent Occupation--This activity will be the 1st step in the child's awareness of careers.

THURSDAY--Setting the mood for the hotel-restaurant field trip.

- A. Filmstrip dealing with hotels and restaurants followed by a discussion of the visual aide.
- B. World of Work Book--A coordination of world of work with reading and writing. Children will make their own book of people at work and will label each picture with the appropriate career.

FRIDAY--Primary field trip to hotel and restaurant.

THURSDAY--Upper elementary trip to hotel and restaurant.

FRIDAY--A hands on wood experience. This is the culminating activity, where children's hands create a tool used by the workers' hands. Children will all make wooden trays which are used in the following careers:

Bus Boy	Bar Maid
Waitress	Bartender
Room Service	Maid
Pool Service	Dishwashers
	Cooks

- B. Follow-Up Career Education Questionnaire--The objective of this questionnaire is to see student progress in knowledge of career ed; emphasis on hotels and restaurants.

FOURTH PROGRAM
In Depth Hotel Field Trip

1. Parking attendant
2. Registration desk:
 - a. attendant
 - b. phone operator
3. Bell boys
4. Public relations people
5. Maids
6. Maintenance people
7. Waitresses
8. Bus boys--Bell Captain
9. Hostess
10. Cocks
11. Dishwashers
12. Shopkeepers
13. Groundkeepers
14. Bar tender
15. Secretaries

Points of Interest

- *Swimming pool (pumps and equipment)
- *Air conditioning units
- *Parking lot
- *Switchboard
- *Elevators
- *Cigar Shops
- *Maid's room
- *Storage closets
- *Kitchen

* *Beauty Shop*

- Concerned with the world of life which concerns the world of work.
- Relationship between education and employment.

Questions

- A. Jobs you perform in your work?
- B. Salary hours worked
- C. Skills necessary--training
- D. Drawbacks--benefits
- E. Years in present occupations
- F. Working conditions
- G. Tools used
- H. How hired--by whom?
- I. Security

DON'T MISS the BUS !!!

The students on our district are being taught the importance of work. Along these lines, we are going on an exciting bus trip to _____

OR

Please go to _____ and _____ bus stop to take in a learning trip. For extra money for both of you, look out for YOUR EDUCATION & WORK.

To make the trip even better, we'll have a first space in the hole's curriculum. Come and get it. Also, don't forget to look forward to reading...

W. H. Z. 1.

Date: _____

01111 1111111111

1. Career education is: a) going to school b) playing baseball
and learning about different jobs.
2. A hotel boy: a) washes dishes b) cleans blackboards c) carries
people's bags.
3. A switchboard operator: a) answers the door b) answers the hotel
phone c) cleans the pool.
4. The chef: a) cooks the food b) answers the phone c) waits on
customers.
5. There are: a) few jobs for people in a hotel and restaurant b) many
different jobs in a hotel and restaurant c) no jobs in a hotel
and restaurant.
6. List three kinds of workers in a restaurant.
A.
B.
C.
7. List three kinds of workers in a hotel.
A.
B.
C.
8. What kind of work do you like best?

1. Which one has a job?

2. Which one is a bellboy?

3.

Which one is a switchboard operator?

4.

Which one is a chef?

5. Which one is a waitress?

6. What does a secretary use?

7. What does a beautician use?

8. What does a pilot use?

9. What does a teacher use?

APPENDIX E

Robert Myers' End of Semester Report

Summary of End of Semester Reports

Tab	Name	Age	Class Year	Training Station	Training or Progress Rating	Remarks
B	Bedoy, G.	17	Senior	Non-Destructive Testing, DMAFB (Note 1)	Excellent	Tuition Assistant, Cochise College.
C	Benitez, D.	17	Junior	Disaster Control Office, DMAFB.	Satisfactory	Resigned training Station; Family.
D	Canett, H.	19	Senior	Dental Office, Technician trainee.	Excellent	Full time position after graduation.
E	Garcia, J.	18	Senior	Dean of Students Office, Tucson High School.	Excellent	Bureau of Ind. Affairs after graduation.
F	Guzman, M.	18	Senior	Inventory clerk, auto parts store.	Excellent	Apply for scholarship, Pima College or U of A.
G	Mendoza, J.	18	Senior	Refrigeration Shop, DMAFB.	Excellent	Pima College-Refg./Air Conditioning.
H	Monje, R.	18	Junior	Social Actions Office, DMAFB.	Poor	School/Job attendance problems.
I	Mora, N.	17	Junior	Civ. Payroll Section, Commit. Off., DMAFB.	Satisfactory	Continue in summer employment.
J	Pro, A.	17	Junior	Tech. Order Library, DMAFB.	Excellent	Continue in summer employment.
K	Redmond, R.	17	Junior	Transportation Office, DMAFB.	Marginal	Job attendance, attitude problems.
L	Russell, M.	17	Junior	Staff Judge Advocate's Office, DMAFB.	Satisfactory	Continue in summer employment.
M	Urbina, F.	18	Senior	Non-Destructive Test, DMAFB.	Excellent	Continue in summer, Cochise College (3).
N	Valencia, C.	18	Senior	Certified Public Accountant Office	Excellent	Scholarship, Univ. of Arizona
O	Valencia, R.	16	Soph.	Teacher's Aide, School Roosevelt Elem.	Excellent	Summer employment, Ariz. Hist. Museum
P	Yribe, A.	16	Note 2	Commissary Warehouse, DMAFB.	Poor	Discharged, poor job attendance.
Q	Arias, T.	18	Senior	Dental Office; Secretary Trainee	None	See Note 3.
R	Perez, T.	17	Junior	Personnel Office, DMAFB.	None	See Note 4.

Notes:

1. DMAFB: Davis-Monthan Air Force Base.
2. Enrolled on three occasions; no credit earned.
3. To be employed upon graduation.
4. Start employment June 12.

EXEMPLARY VOCATIONAL EDUCATION PROGRAM
TUCSON HIGH SCHOOL OFFICE

End of Semester Report

1. Name: Bedoy, Geraldo
2. Date of Birth: June 10, 1954
3. Area(s) of Career Interest: Auto mechanics
4. Previous Work Experience: Helper in auto body shop; gas station attendant; and restaurant worker ("El Taco").
Worked one summer with Neighborhood Youth Corps; assigned to Tucson City Refuse Department as Trash Collector.
5. Academic Background:
 - a. Graduating Senior
 - b. Vocational Courses: General Metals Shop; Auto Mechanics; and Wood Shop.
 - c. Cumulative Grade Average: 2.7436
 - d. Linear Class Standing: 366/604
6. Job Training Station Data:
 - a. Station: Non-Destructive Test Facility, Military Aircraft Storage and Disposition Center, Davis-Monthan Air Force Base.
 - b. Training: Assists in physical inspection of aircraft parts for conformance with technical description and change data. Uses revised drawings and specification sheets to identify model, series, and Modification Work Order changes. Up-dates shop records, parts tags, and catalogs as directed by supervisor.
 - c. Attitude: Excellent. Supervisor has consistently reported that student is eager to learn, is a hard worker, and is readily accepted by normal work force.
 - d. Skills: Has gained skills in use of parts records systems and use of drawings and technical data used in large scale logistical system.

- e. Knowledge: Has developed knowledge of aircraft parts and use of maintenance manuals and related technical data.
7. Post Secondary Plans: Job training station led to development of student's interest in aircraft mechanic's training. Student applied for the Aircraft Frame and Power Plant Mechanic's Course at Cochise College, Douglas, Arizona. He was accepted and subsequently granted tuition assistance in the form of a National Defense Student Loan, a matching grant, and student employment benefits in the amount of \$2,049. This amount will cover cost of one year's training leading to a FAA mechanic's certificate.
8. Comments: Student experienced few problems during high school career. Grades, attendance record, and conduct records are above average. Student had no post secondary plans to continue training or education because of family's severe economic problem. He was given assistance in investigating several possible opportunities for additional training. As noted above, he subsequently developed an interest in aircraft mechanics and will undertake post secondary training in this field. Student's career outlook and maturity have shown significant development during the time in which he has worked with this Program. Supervisor's appraisal and student's comments regarding his training are attached as inclosures to this report.

EXEMPLARY VOCATIONAL EDUCATION PROGRAM
TUCSON HIGH SCHOOL OFFICE

End of Semester Report

1. Name: Benitez, Dolores
2. Date of Birth: July 23, 1954
3. Area(s) of Career Interest: Office work-undefined; and
Commercial Art.
4. Previous Work Experience: Part time work as baby sitter.
5. Academic Background:
 - a. Class: Junior
 - b. Vocational Courses: Typing
 - c. Cumulative Grade Average: 3.1852
 - d. Class Standing: Not applicable
6. Job Training Station Data:
 - a. Station:
 - (1) Base Recreation Center, Davis-Monthan Air Force Base.
 - (2) Disaster Control Center, DMAFB.
 - b. Training:
 - (1) Under supervision of Recreation Center Director, prepared various illustrations for use in displays and on local bulleting boards. Performed minor and routine office tasks as directed. A semi-professional artist was subsequently assigned to the Recreation Center with the result that Benitez became surplus to the needs of the Director. Limited office skills and marginal performance of assigned tasks necessitated student's transfer to another job station.
 - (2) Disaster Control Center: On this job station, student has been able to utilize artistic talents in preparation of drawings and sketches for use in training materials, posters,

announcements, and other publications issued by the Disaster Control Center. Further performs routine office tasks such as limited typing, filing, and telephone reception work.

- c. Attitude: Satisfactory. Student appears to be shy, immature, and lacking in initiative or incentive. Job attendance is marginal.
 - d. Skills: Student has an artistic ability in preparing free hand sketches and drawings. She has employed her abilities in her present training position and has shown steady improvement in performing free hand work. She is hampered by a lack of office skills and lack of initiative in developing these or other skills that could help her in employment situations.
 - e. Knowledge: Student has developed knowledge of routine office work and has developed better understanding of the skill requirements necessary for successful job performance.
7. Post Secondary Plans: Student has developed an interest in Health Career field and has shown particular interest in practical nursing or the medical technician field. She has been encouraged to investigate the possibilities in this field and has been urged to seek further information in Health Career training.
8. Comments: Student's lack of maturity has been a significant problem area during this period. Miss Varela has worked closely with both the student and her mother to provide assistance in over-coming this problem. Student's response to Miss Varela's efforts and to job experience has been satisfactory. The student's response to job supervision has shown significant improvement in the sense that she now accepts her supervisor's guidance as being helpful rather than critical.

EXEMPLARY VOCATIONAL EDUCATION PROGRAM
TUCSON HIGH SCHOOL OFFICE

End of Semester Report

1. Name: Canett, Mary Helen (Mrs)
2. Date of Birth: June 6, 1952
3. Area(s) of Career Interest: General office work or dental technician.
4. Previous Work Experience: Sales clerk.
5. Academic Background:
 - a. Graduating Senior
 - b. Vocational Courses: Typing; General Business; and Office Machines.
 - c. Cumulative Grade Average: 3.0286
 - d. Linear Class Standing: 436/604
6. Job Training Station Data:
 - a. Station: Dental office specializing in orthodontics.
 - b. Training: Receives training in preparation of dental castings used in the development and fitting of orthodontic devices. Works with patients as dentist's assistant. Performs routine office tasks during absence of office secretary.
 - c. Attitude: Excellent. Doctor comments that student is dependable, learns quickly, and has a cheerful and friendly disposition. Student is particularly effective in working with children.
 - d. Skills: Student is gaining technical skills in dental practices and is acquiring additional skills in office practices.
 - e. Knowledge: Student's knowledge and practice in office skills has been helpful and is useful in this position. However, the main knowledge gained in this training position addresses dental practices and associated techniques and experience in working in

(

(

a professional atmosphere.

7. Post Secondary Plans: Student is married and has a small child. Her primary interest was to gain experience and salable skill prior to graduation in order to assist in supporting her family. Her training progress has been excellent and she has been accepted for full time employment in this position upon graduation.
8. Comments: This student is far more mature than the average high school student and had a very definite goal in mind at the time she entered the program. She is well groomed, always presents an attractive appearance, and has an open and friendly personality. These attributes, along with her willingness to learn and good job habits, were significant considerations in selection for full time employment. Supervisor's appraisal is attached as an inclosure.

1. Name: Garcia, Juanita
2. Date of Birth: April 13, 1953
3. Area(s) of Career Interest: Office or secretarial work.
4. Previous Work Experience: Neighborhood Youth Corps-Safford Area Council. Routine office work to include typing, filing, and telephone receptionist.
5. Academic Background:
 - a. Graduating Senior.
 - b. Vocational Courses: Typing (2 years); Office Machines; and Clerical Practice.
 - c. Cumulative Grade Average: 3.1200
 - d. Linear Class Standing:
6. Job Training Station Data:
 - a. Station: Dean's office, Tucson High School.
 - b. Training: Assists office secretary in performance of routine office tasks to include typing (completes various school forms pertaining to student administration and prepares standard letters using school correspondence format). Acts as receptionist at office counter and for incoming office telephone calls.
 - c. Attitude: Excellent. Supervisor consistently reports that student is eager to learn, follows instructions, and is an industrious worker.
 - d. Skills: Student's office work skills have shown steady improvement during this training period. Her typing skill has improved in speed, accuracy, and neatness.

c. Knowledge: Student's knowledge of general office procedures has shown steady improvement.

7. Post Secondary Plans: Student intends to enroll in secretarial training courses at Pima College upon graduation. She has applied for summer employment at Davis-Monthan Air Force Base through the Bureau of Indian Affairs.
8. Comments: One of the more mature students active in the Program. Her training period in the Dean's Office, although relatively short, has given her the opportunity to refine existing skills and to gain additional experience in working with the public. Student encouraged to apply for entry level job position with U.S. Civil Service Commission and received an applicant rating of 96. Student has been further encouraged to apply for tuition and work assistance programs available to minority groups at Pima College.

Secretary Caroline Strong

RETURN TO _____ AS SOON AS POSSIBLE

EXEMPLARY VOCATIONAL EDUCATION PROGRAM
TUCSON HIGH SCHOOL OFFICE

End of Semester Report

1. Name: Guzman, Maria
2. Date of Birth: October 3, 1952
3. Area(s) of Career Interest: Secretarial or office work.
4. Previous Work Experience: Neighborhood Youth Corps program; Office aide, Tucson City Refuse Department. Also, under NYC, worked as clerk-typist in the Tucson Public School system.
5. Academic Background:
 - a. Graduating Senior
 - b. Vocational Courses: Typing; Office Machines; and General Business courses.
 - c. Cumulative Grade Average: 2.2424
 - d. Linear Class Standing: 181/604
6. Job Training Station Data (Two stations involved):
 - a. Stations:
 - (1) Office Aide, dental clinic. Performed routine office tasks under supervision of office secretary. Student is quite shy and very soft spoken. She experienced extreme difficulty in meeting incoming office patients and in handling income telephone calls. Employer suggested transfer to job with less public contact requirements.
 - (2) Office aide and inventory clerk trainee, auto parts store. Assists office secretary with routine tasks and, under the supervision of the store manager, is being trained to post and maintain store's daily inventory records.
 - b. Training: Student has received practical experience in

office work to include preparation of correspondence, filing, billing, and records maintenance. Her supervisor at the dental office stated that her work was excellent, with the exception of public contacts, and provided an excellent reference for future employment. Her current position with the auto parts store provides on the job training in daily management of a large and complex parts inventory system.

- c. Attitude: Excellent. Supervisors have commented that student is industrious, follows instructions, and learns rapidly. Although she is quite shy, she is very determined and has made exceptional progress in her second job training situation..
 - d. Skills: Student has acquired skills and proficiency in routine office work and is rapidly gaining further skills in inventory procedures and management.
 - e. Knowledge: Second supervisor (auto parts store) has commented on student's knowledge of office routine and her business like attitude. Store manager states that, with additional experience, student will be capable of handling all inventory maintenance tasks by herself.
7. Post Secondary Plans: Student has been accepted by present employer for full time office position upon graduation from high school.
8. Comments: During initial interview with this office it was discovered that student was an alien (born in Mexico).. She was encouraged to apply for U.S. citizenship and has done so. Student's progress, particularly development of poise and self confidence, has been excellent. She appears to be making a significant effort to overcome her shyness. Current supervisor has made several favorable comments on student's attention to detail, accuracy, neatness, and

work habits. Supervisor's appraisal and student's comments on Program are attached as inclosures.

Supervisor's Name R. Delia Munoz

Student's Name Maria Guzman

Extension _____

COMMENT:

Maria has been a great help in our office. She is a quite person and follows instructions as given and shown initiative in certain areas. We hope she continues her education as we feel that she is the youth needed by our country for the tomorrows to come.

Pending arrangements by some of our staff I hope Maria will be able to continue working with us this summer.

note: In a subsequent discussion, Mrs. Munoz stated that she feels a "satisfactory" rating, as "unsatisfactory" have more meaning than "excellent" or "pass"

RETURN TO _____ AS SOON AS POSSIBLE

EXEMPLARY VOCATIONAL EDUCATION PROGRAM
TUCSON HIGH SCHOOL OFFICE

End of Semester Report

1. Name: Mendoza, Jimmy
2. Date of Birth: July 17, 1953
3. Area(s) of Career Interest: Air Conditioning/Refrigeration
4. Previous Work Experience: Service Station attendant and carpenter's helper.
5. Academic Background:
 - a. Graduating Senior
 - b. Vocational Courses: General Metals Shop; Machine Shop; and Air Conditioning/Refrigeration (2 years).
 - c. Cumulative Grade Average: 2.3125
 - d. Linear Class Standing: 191/604
6. Job Training Station Data:
 - a. Station: Air Conditioning and Refrigeration Shop, Base Engineer's Office, Davis-Monthan Air Force Base.
 - b. Training: Assists journeyman refrigeration mechanics in testing, trouble diagnosis, repair, and installation of all types of refrigeration equipment. Assists in depot level (re-build) maintenance of refrigeration equipment ranging from heavy duty industrial units to household equipment.
 - c. Attitude: Supervisor reports that student is attentive, eager to learn, and willing to work. Shop personnel contacted have commented on student's knowledge of refrigeration theory and mechanics.
 - d. Skills: Student has gained skills in shop procedures, applied test routines, and maintenance procedures used in a wide variety of refrigeration equipment.

- e. Knowledge: Student has gained working knowledge of heavy duty industrial and specialized (missile site equipment) refrigeration equipment. Practical experience included hands-on training in re-building of major units, on-site trouble call procedures, and maintenance of equipment records.
7. Post Secondary Plans: Initially, student was interested in obtaining practical experience in his area of career interest. He subsequently elected to obtain further training in the air conditioning and refrigeration field, and submitted an application for a scholarship to a local trade school. He has not received a reply to his application at this time. Student is considering entering Pima College if the trade school scholarship application is not favorably considered.
8. Comments: Student is very reserved and in-drawn; appears to be a "loner". His grade average, attendance record, and conduct are well above average. Records indicate that he is punctual in reporting for classes with few "tardy's" noted. His job training station supervisor comments that he is careful in following instructions and that he has demonstrated initiative in several ways. As an example, the student frequently performs shop clean up work, without being asked to do so, while waiting for transportation. Journeyman mechanics state that the student has the interest and potential to succeed in this particular field. Supervisor's appraisal and student's comments on the Program are attached as inclosures.

EXEMPLARY VOCATIONAL EDUCATION PROGRAM
TUCSON HIGH SCHOOL OFFICE

End of Semester Report

1. Name: Monje, Rose
2. Date of Birth: March 4, 1954
3. Area(s) of Career Interest: Legal secretary or general office work as salable skill. Interest in fashion modeling.
4. Previous Work Experience: Neighborhood Youth Corps Program- child care in nursery; worked in book binding plant; general office work in Sanitation Department, City of Tucson.
5. Academic Background:
 - a. Class: Sophomore; has attended school for three years but has not earned sufficient credits for junior standing.
 - b. Vocational Courses: Typing, General Business, and Bookkeeping. (Exposure only; has failed most of these courses.
 - c. Cumulative Grade Average: 3.750
 - d. Linear Class Standing: Not applicable.
6. Job Training Station Data:
 - a. Station: Social Actions Office, Headquarters, Davis-Monthan Air Force Base.
 - b. Training: Receptionist and general office work. Receives office visitors and incoming telephone calls. Files office correspondence and performs limited typing assignments.
 - c. Attitude: Marginal. Very poor job attendance record; supervisor is considering discharge for cause because of poor attendance. See further discussion in paragraph 8, this report.
 - d. Skills: Limited. Student has had the opportunity to gain general office skills. However, her erratic attendance pattern has precluded assignment of work areas that involve a requirement for continuity.

e. Knowledge: Limited. Student has had the opportunity to gain both knowledge and practical experience in general office work, but has been unable to make any significant progress up to this point in time.

7. Post Secondary Plans: None determined at this time.

8. Comments: Student has experienced severe family situation that contributes in large measure to her several problem areas. Upon reaching 18 she moved from her home to that of a friend. This arrangement lasted for several weeks and was abruptly terminated after an argument erupted within the family with whom she was residing. Student then moved into a motel apartment with her brother, who is unemployed. Review of student's school records indicates a long term problem in attendance and record of academic failures because of poor attendance. This pattern carried over in to her job training situation. Numerous conference with this student have been essentially non-productive. Home visits by Miss Varela appear to have had an encouraging effect upon the student, but not enough to alter her habit patterns. In addition to personal problems, the student has experienced a health problem. She was taken to the El Rio Neighborhood Health Center by her mother for examination. A Health Center team consisting of a doctor, Practicing Nurse, and social worker was subsequently assigned to assist this student. Several actions have been initiated by this team on behalf of this student. However, it is too early to identify or determine the results of such assistance.

Excellent () Satisfactory () Poor ()

The uniqueness of our office has inhibited our ability to provide training on a regular basis. It's feel in some ways this has interrupted the student's opportunity to improve. We do recognize the need for improvement, but feeling can overcome this with additional time spent with her.

1224

7. Would you hire this individual again if you had the opportunity: _____

If not, please explain.

8. Suggestions for Improvement *Rose needs to show more motivation towards improving her abilities to type and communicate in writing.*

Supervisor's Name Paul D. McGowan

Student's Name Rose Morje

Extension 4228

RETURN TO _____ AS SOON AS POSSIBLE

EXEMPLARY VOCATIONAL EDUCATION PROGRAM
TUCSON HIGH SCHOOL OFFICE

1226

End of Semester Report

1. Name: Mora, Norma
2. Date of Birth: December 26, 1954
3. Area(s) of Career Interest: Social worker; interested in working with children.
4. Previous Work Experience: Neighborhood Youth Corps Program-worked as clerk-typist at U.S. Air Force Recruiting Station.
5. Academic Background:
 - a. Class: Junior
 - b. Vocational Courses: Typing and office machines.
 - c. Cumulative Grade Average: 3.520
 - d. Linear Class Standing: Not applicable.
6. Job Training Station Data:
 - a. Station: Civilian Payroll Section, Office of the Comptroller, Davis-Monthan Air Force Base.
 - b. Performs office tasks associated with computation, preparation, and audit of documents utilized in preparation of pay rolls. Receives training in operation of various office machines to include adding machines, key punches, etc. Checks and verifies data recorded on various types of machine run-offs. Performs other routine office tasks as directed.
 - c. Attitude: Satisfactory. Student is somewhat shy and is immature. Supervisor comments on seemingly sullen attitude when student is assigned routine or repetative tasks.
 - d. Skills: Student has opportunity to acquire skills associated with the several activities required in computation, recording, and preparation of pay rolls. Student has stated that, "there is nothing to learn in this job". Supervisor is aware of this

attitude and has made an effort to provide varied experiences within the operating section.

- d. Knowledge: Student has an opportunity to gain knowledge of large scale office operations, additional office skills, and basic functions of a financially oriented office.
7. Post Secondary Plans: Student is undecided as to any future plans at this time.
8. Comments: Student has shown steady, if slow, improvement of attitude during exposure afforded by this job training station. Her limited skills precludes assignment to many of the job areas available in this particular office. Student's job attendance record has shown steady improvement. These trends suggest a certain amount of maturity has developed as a result of job training experience. Student has recently stated that she has asked her supervisor more varied assignments in office tasks. Conferences with supervisor indicates student's requests will be favorably considered within the needs of the office routine.

Supervisor's Name William E. Hays Student's Name Angela Pro
Extension _____

Miss Pro has learned the many complex tasks associated with a DOD Library. Tasks involved, receipt, distribution (24 accounts), filing (a very difficult task in alpha-numeric procedures) making up accountable record cards and typing requisitions. She learned very quickly, is a very industrious student/employee and her job performance has been excellent. Angie is the type of person we would be pleased to recommend for continuation in the program.

RETURN TO _____ AS SOON AS POSSIBLE

EXEMPLARY VOCATIONAL EDUCATION PROGRAM
TUCSON HIGH SCHOOL OFFICE

1234

End of Semester Report

1. Name: Redmond, Rose
2. Date of Birth:
3. Area(s) of Career Interest: Receptionist; clerical and filing work; or Nurse's Aide.
4. Previous Work Experience: Neighborhood Youth Corps Program-- worked as receptionist and out-patient records clerk, Pima County Hospital.
5. Academic Background:
 - a. Class: Sophomore; insufficient credits for Junior standing.
 - b. Vocational Courses: Typing (one semester).
 - c. Cumulative Grade Average:
 - d. Linear Class Standing: Not applicable.
6. Job Training Station Data:
 - a. Station: Transportation Office, Davis-Monthan Air Force Base.
 - b. Training: Receives training in administrative processing of transportation documents. Identifies and sorts bills of lading according to category; transfers data from shipping documents to office log forms. Performs filing tasks and other routine duties as assigned.
 - c. Attitude: Marginal. Student has a poor job attendance record. Supervisor has given a final warning and will discharge this student for cause if her attendance does not improve. Student's attitude can probably be best characterized as disinterested or lackadaisical. Numerous conferences with the student on this problem area have not been productive.
 - d. Skills: Limited. Student has only limited office skills and has failed to improve existing skill level or to develop any

new skills. Her exposure to operation and administration of transportation activities has provided with a basic understanding of the skills and aptitudes required for this type business.

- e. Knowledge: Limited. Student has gained a limited knowledge of office routine.
- 7. Post Secondary Plans: None at this time. Student has been unable to decide what she can or wants to do. Her main interest appears to be a type job that will permit her to socialize.
- 8. Comments: Student's attitude and immaturity are significant problem areas. She is prone to regard guidance or correction on the part of her supervisor as being discriminatory. Her limited skills have precluded job transfer. There is a decided lack of motivation or incentive, at least at this point in time. Student will be allowed to continue at her present job, providing her supervisor does not discharge her for cause, in an effort to provide her with some income and to provide as much opportunity as possible for development of a more positive attitude.
